Functional Skills Certifi
FUNCTIONAL MATHEM

Level 2

Monday 16 January 2017 Morning Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:
- a calculator
- mathematical instruments
- a copy of the data book (examination) (enclosed).

Instructions
- Use black ink or black ball-point pen. Draw diagrams in pencil.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- State the units of your answer where appropriate.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 60.
- You may ask for more answer paper, graph paper and tracing paper. These must be tagged securely to this answer book.
- Evidence of checking is specifically assessed in Questions 2(a) and 4(e). These questions are indicated with a †.

Advice
- In all calculations, show clearly how you work out your answer.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

outside the box

Answer **all** questions in the spaces provided.

1 **Cookies**

Chris

Chris makes batches of cookie dough.

Here are the ingredients he needs to make one batch.

One batch of cookie dough	
200 g	margarine
250 g	flour
100 g	sugar
2	eggs
1 teaspoon	baking powder

One batch makes exactly

16 large cookies

or

24 small cookies.

outside the box

1 (a) On Monday, Chris uses 400 g of margarine to make cookie dough.
He uses all of the dough to make **small** cookies.

How many can he make?
Circle your answer.

[1 mark]

2 24 32 (48)

1 (b) On Tuesday, Chris makes one batch of cookie dough.
He uses some of the dough to make 2 **large** cookies.

He says,

"I will use the rest of the dough to make some **small** cookies."

How many **small** cookies can he make?

[3 marks]

2 large cookies is equivalent to $\frac{24}{16} \times 2 = 3$ small cookies.

Therefore, the remaining mix can create $24 - 3 = 21$ small cookies.

Question 1 continues on the next page

1 (c) On Wednesday, Chris makes cookies using 10 batches of dough.
He will sell all the cookies in bags at these prices.

Bag of 4 large cookies	£1.35
Bag of 8 small cookies	£1.75

Here are his costs.

Total cost of ingredients	£19.50
Bags	2p each

He is going to make

only large cookies

or

only small cookies.

He says,

"If I make and sell only large cookies my total profit will be £1.30 more than if I make and sell only small cookies."

Is he correct?
You **must** show your working.

[8 marks]

Total number of cookies:

Small = $10 \times 24 = 240$, Large = $10 \times 16 = 160$

Number of bags:

Small = $\frac{240}{8} = 30$, Large = $\frac{160}{4} = 40$

Total income:

Small = $30 \times £1.35 = £52.5$, Large = $40 \times £1.35 = £54$.

Total spent on bags:

Small = $£0.02 \times 30 = £0.60$, Large = $£0.02 \times 40 = £0.80$.

Total profit:

Small = $£52.50 - £0.60 = £51.90$, Large = $£54 - £0.80 = £53.20$.

$£53.20 - £51.90 = £1.30$, so Chris is correct.

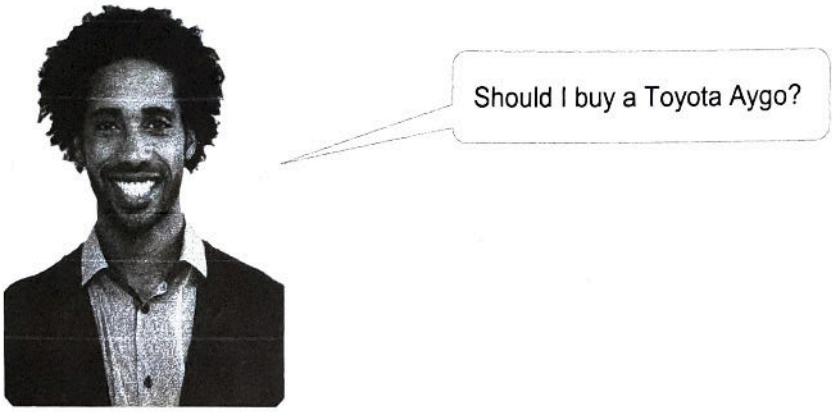

outside the box

12

2 **Cars**

There is a **data sheet** for Cars.

Alfie is thinking about buying a new car.

Alfie

†2 (a) Alfie plans to

buy a new car after 1 April 2017

keep the car for 5 years.

Work out the **total** vehicle tax he will pay if he buys a Toyota Aygo.

[2 marks]

95g/km ⇒ £120 in Y1, £140 after Y1.

⇒ £120 + (4 × £140) = £680.

Check your answer.
Show how you have done your check.

[1 mark]

£680 − £120 = £560.

£560 ÷ 4 = £140.

box

Alfie will use his new car for work.

2 (b) He makes these notes.

> I drive a total of 62 miles each day for work.
> I work for 5 days each week.
> I work for 46 weeks each year.
>
> Diesel costs £4.96 per gallon.
> Petrol costs £4.87 per gallon.
>
> My actual fuel efficiency will be 20% **lower** than the official value.

He says,

"I will spend at least £1300 a year on fuel for work if I buy a Toyota Aygo."

Is he correct?
You **must** show your working.

[7 marks]

Actual fuel efficiency: $65.7 \times 0.2 = 13.14$

$\Rightarrow 65.7 - 13.14 = 52.56$ mpg

Total miles per year: $62 \times 5 \times 46 = 14260$ mi.

Gallons used per year: $\frac{14260}{52.56} = 271.31$ gal.

$271.31 \text{ gal} \times £4.87 \text{ per gal} = £1321.27$

So, Alfie is correct.

2 (c) Alfie buys a car.

For 8 days, he records the time he takes for

his journey to work by car

and

his journey home by car.

	Journey to work by car (minutes)	Journey home by car (minutes)
Day 1	42	47
Day 2	46	52
Day 3	38	39
Day 4	42	44
Day 5	46	49
Day 6	52	58
Day 7	48	40
Day 8	39	36

He knows that his total journey time to work and home by **train** each day would be $1\frac{1}{2}$ hours.

Alfie has 120 working days left in the year.

He says,

"I estimate that on 85 days out of 120 the total journey time would be less by car than by train."

Based on these 8 days, is his estimate correct?
You **must** show your working.

[5 marks]

D1: 89, D2: 98, D3: 77, D4: 86, D5: 95, D6: 110, D7: 88, D8: 75.

Less More Less Less More More Less Less

5/8 days took under 1½ hours.

5/8 × 120 = 75 out of 120 days.

His estimate is not correct.

15

box

3 **Hotel**

I am the manager of a hotel with 168 rooms.

Kim

3 (a) The hotel has 128 standard rooms and 40 deluxe rooms.
Each room is cleaned the day after it has been used.

To clean a room is

25 minutes work for a standard room

30 minutes work for a deluxe room.

Each cleaner

starts work at 8.30 am and finishes work at 2.00 pm

has **two** 20-minute breaks.

On Tuesday, all the rooms are used.

How many cleaners are needed on Wednesday?
You **must** show your working.

[6 marks]

$128 \times 25 = 3200$ mins to clean all standard rooms.

$40 \times 30 = 1200$ mins to clean all deluxe rooms.

$\Rightarrow 3200 + 1200 = 4400$ mins total.

8:30am to 2:00pm is 330 mins.

$330 - (2 \times 20) = 290$ mins from each cleaner.

$\frac{4400}{290} = 15.17$

$\Rightarrow$ 16 cleaners are needed.

box

Each day, the cleaners replace used milk cartons.

3 (b) The table shows the number of milk cartons put in 50 rooms yesterday.

Number of milk cartons	Number of rooms
4	18
3	8
2	11
1	9
0	4

Show that 2.54 was the mean number of milk cartons put in the 50 rooms. **[3 marks]**

$(4 \times 18) + (3 \times 8) + (2 \times 11) + (1 \times 9) = 127$ cartons.

$18 + 8 + 11 + 9 + 4 = 50$ rooms.

$\frac{127}{50} = 2.54$ cartons per room.

MasterFunctionalSkills.co.uk · AQA Maths Level 2 · January 2017 Solutions
MFS Step 10: Accredited AQA Method & Mark Scheme Verified by Tutor Abdul [M1 A1] [100% PASS]

3 (c) Kim estimates the cost of the milk cartons she needs next year.
She makes these notes.

> 365 days in a year
> 75% of the 168 rooms will be used each day
> An average of 2.54 cartons per day for each room used
> A box of 240 cartons costs £12.60

Kim says,

"The cost will be less than £6000"

Is she correct?
You **must** show your working.

[7 marks]

$0.75 \times 168 =$ 126 rooms per day

$\Rightarrow 126 \times 2.54 =$ 320.04 milk cartons per day.

$320.04 \times 365 =$ 116814.6 cartons per year.

$\frac{116814.6}{240} =$ 486.7275 boxes per year.

$486.7275 \times £12.60 =$ £6132.7665 per year.

No, she is not correct.

Do not write outside the box

4 **Transporting hamsters**

There is a **data sheet** for Transporting hamsters.

Ola makes cuboid boxes for transporting hamsters.

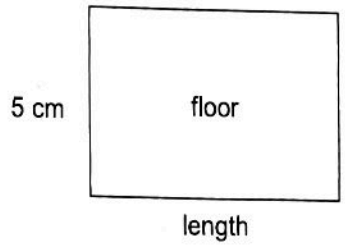

She is making a box to transport **one** 4-week-old Syrian hamster.

She wants

the width of the box to be 5 cm

the floor area to be no more than 60 cm^2

4 (a) Ola draws this sketch of the floor of the box.

Not drawn accurately

Write a suitable measurement for the length.

[1 mark]

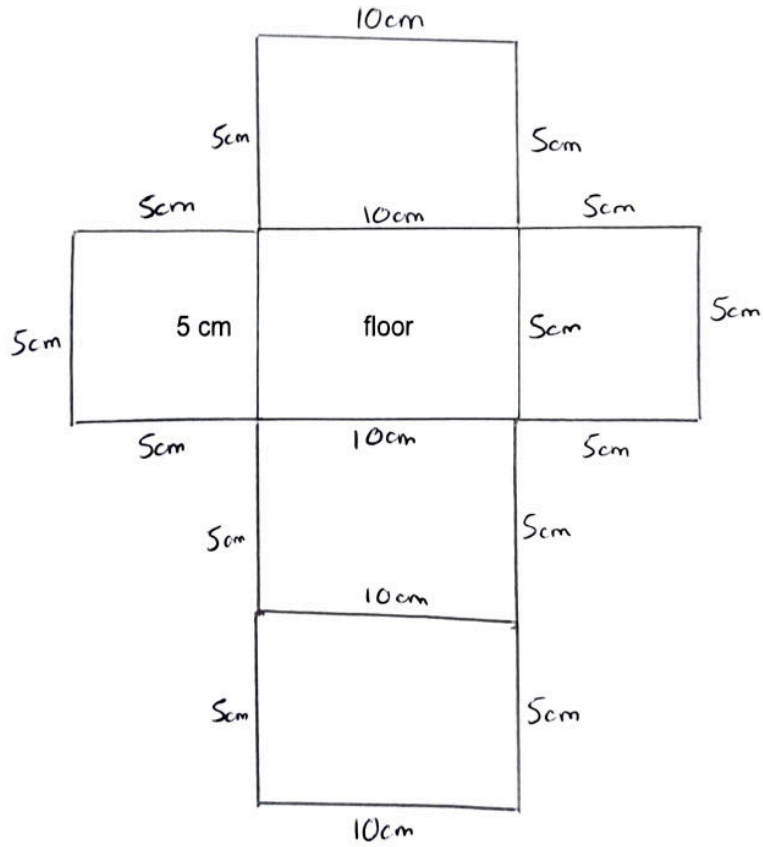

$\frac{45cm^2}{5cm} = 9cm.$ $\frac{60cm^2}{5cm} = 12cm$ length between 9cm and 12cm. 10cm, for example.

4 (b) Complete the sketch of the net of the box on the opposite page.
Include the measurements of all edges.
Do **not** include windows.

[3 marks]

box

Not drawn accurately

box

Ola has made a different box.

4 (c) One side of this box has
an area of 112 cm^2
a 6 cm by 4 cm rectangular window.

The area of the window must be between 16% and 25% of the area of the side.

Is the area of the window suitable?
You **must** show your working.

[4 marks]

Area of window: $6 \times 4 = 24cm^2$.

$\frac{24}{112} = 0.214$

$\Rightarrow$ 21.4%.

Yes, this window is suitable.

4 (d) The temperature in the box must be between 46°F and 85°F
Ola's thermometer only measures in degrees Celsius.

Work out the two temperatures in degrees Celsius to the nearest whole number.

[3 marks]

$\frac{5}{9}(46°F - 32) = \frac{5}{9} \times 14 = 7.\dot{7}°C \approx 8°C$

$\frac{5}{9}(85°F - 32) = 29.\dot{4}°C \approx 29°C$

Temperature must be between
8°C and 29°C.

Ola makes a box with a floor area of 2000 cm^2
The box is tall enough to transport Syrian hamsters or Dwarf hamsters.

†4 (e) Ola could transport 6-week-old Syrian hamsters in this box.

Work out the **maximum** number she could transport. **[2 marks]**

$\frac{2000}{71} = 28.17 \Rightarrow$ 28 Syrian hamsters.

Check your answer.
Show how you have done your check. **[1 mark]**

$28 \times 71 = 1988 < 2000$

$29 \times 71 = 2059 > 2000.$

28 is the maximum.

4 (f) Instead, Ola could transport 6-week-old Dwarf hamsters in the box.

How many **more** Dwarf hamsters than Syrian hamsters could she transport? **[3 marks]**

$\frac{2000}{48} = 41.\dot{6} \Rightarrow 41$ Dwarf hamsters

$41 - 28 = 13.$
