Master Functional Skills	Model Solutions (MFS)

Pearson Edexcel Functional Skills

Centre Number	Candidate Number
MFS-UK	FSM01/01

Mathematics

Level 1

19 – 23 March 2018
Time: 1 hour 30 minutes

Paper Reference
FSM01/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A: The beehive

Answer all questions in this section.

Write your answers in the spaces provided.

1 Alia keeps bees in a beehive.

She needs to check the beehive on a day when
- the wind speed is less than 15 km/h
- the temperature is greater than 10 °C.

Alia has this weather forecast.

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
wind speed (km/h)	26	19	16	13	19	15	13
temperature (°C)	9	10	11	14	9	8	8

(a) On which day should Alia check the beehive?

(2)

Write your answer in the box below.

Step 1: Check Alia's 2 weather conditions against each day:

- *Condition 1: Wind speed < 15 km/h -> Thursday (13) & Sunday (13) [M1]*
  (Mon=26, Tue=19, Wed=16, Fri=19 are all ≥ 15; Sat=15 is not < 15)
- *Condition 2: Temperature > 10 °C:*
  - *Thursday: 14 °C > 10 °C (Valid - meets both conditions)*
  - *Sunday: 8 °C < 10 °C (Too cold)*

Answer: Thursday [A1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

There are 6000 bees in the beehive.
15% of the bees in the beehive are male bees.

Alia thinks there are 900 male bees in the beehive.

(b) Is Alia correct?
Show why you think this. **(2)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate 15% of 6,000 total bees:

- *10% of 6,000 = 6,000 ÷ 10 = 600*
- *5% of 6,000 = 600 ÷ 2 = 300*
- *15% of 6,000 = 600 + 300 = 900 male bees [M1]*

Alternative method: 0.15 × 6,000 = 900 (or 15/100 × 6000 = 900)

Step 2: Compare with Alia's statement of 900:

- *Calculated count (900) = Alia's thought (900).*

Therefore, Yes, Alia is correct. [A1]

(Total for Question 1 is 4 marks)

2 Alia fills 5 jars with honey from the beehive.
She wants to know the mean weight of the honey in the 5 jars.

jar	**1**	**2**	**3**	**4**	**5**
weight of honey (g)	440	460	465	455	450

(a) Work out the mean weight of the honey in the 5 jars.
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate the total weight of honey across all 5 jars:

- ***Total = 440 + 460 + 465 + 455 + 450 = 2,270 g [M1]***

Working: (440 + 460) + (465 + 455) + 450 = 900 + 920 + 450 = 2,270 g

Step 2: Divide by the number of jars (5) to find the mean:

- *Mean = Total weight ÷ 5 jars*
- ***Mean = 2,270 ÷ 5 = 454 g [M1]***

Step 3: State final answer with correct units:

- ***Mean weight of honey = 454 grams (or 0.454 kg) [A1]***

Show your check in the box below.

☑

Reverse Calculation Check:

- ***Reverse multiplication: 454 g × 5 = 2,270 g [B1]***
- *Subtraction check: 2,270 − (460 + 465 + 455 + 450) = 440 g (matches jar 1)*

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Alia also wants to know the range of the weight of the honey in the 5 jars.

jar	1	2	3	4	5
weight of honey (g)	440	460	465	455	450

(b) Work out the range of the weight of the honey in the 5 jars.

(2)

Use the box below to show clearly how you get your answer.

Step 1: Identify the highest and lowest honey weights:

- *Highest weight = 465 g (Jar 3)*
- *Lowest weight = 440 g (Jar 1) [M1]*

Step 2: Calculate the range (Difference):

- *Range = Highest weight – Lowest weight*
- *Range = 465 – 440 = 25 g [A1]*

(Total for Question 2 is 6 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 Alia wants to send a parcel to her friend.
The parcel is 2 jars of honey in a box.

Each jar of honey weighs 625 grams.
The empty box weighs 70 grams.

Alia finds the following prices for sending parcels.

	weight of parcel	
type of postage	**less than 1000 g**	**1000 g to 2000 g**
first class standard	£3.40	£5.50
second class standard	£2.82	£3.82
first class signed for	£4.40	£6.50
second class signed for	£2.90	£3.90

Alia wants to send the parcel first class standard.

How much will it cost to send this parcel using first class standard?

(2)

Use the box below to show clearly how you get your answer.

Step 1: Calculate total weight of the parcel (2 jars + box):

- *2 jars of honey = 2 × 625 g = 1,250 g [M1]*
- *Empty box weight = 70 g*
- *Total parcel weight = 1,250 + 70 = 1,320 g [M1]*

Step 2: Determine postage cost from the pricing table:

- *Service requested: First class standard*
- *Weight bracket: 1,320 g falls into "1000 g to 2000 g"*
- *Table entry for First class standard (1000 g – 2000 g) = £5.50*

Step 3: State final answer:

- *Cost to send parcel = £5.50 [A1]*

(Total for Question 3 is 2 marks)

P 5 8 6 4 1 A 0 6 2 0

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

4 The beehive has wooden frames.
Each frame is made from 4 pieces of wood.

All corners of the frame are right angles.
The diagram shows the lengths of the sides of the frame.

Alia wants to make 2 new frames.
She has a 2.4 metre length of wood.
Alia thinks this will be enough to make the 2 frames.

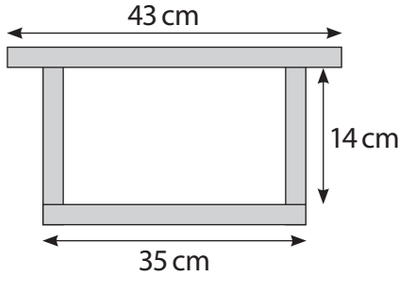

Diagram **not** accurately drawn

Is Alia correct?
Show why you think this. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Convert wood length to centimetres (consistent units):

- Length of wood = 2.4 m = 2.4 × 100 = 240 cm [M1]

Step 2: Calculate total perimeter of ONE frame (4 sides):

- Top side = 43 cm, Bottom side = 35 cm
- Two vertical sides = 14 cm each
- Perimeter of 1 frame = 43 + 35 + 14 + 14 = 106 cm [M1]

Step 3: Calculate wood needed for TWO frames:

- Total wood needed = 2 frames × 106 cm = 212 cm [M1]

Step 4: Compare wood needed with wood available:

- 212 cm needed < 240 cm available (she has 28 cm spare wood).
- Alternative: 240 ÷ 2 = 120 cm per frame; 106 cm < 120 cm.

Therefore, Yes, Alia is correct (wood is enough). [A1]

(Total for Question 4 is 4 marks)

Section B: Beach office

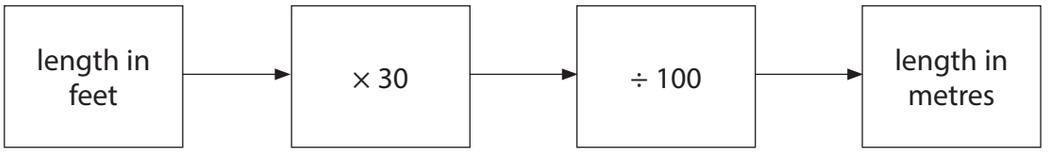

Answer all questions in this section.

Write your answers in the spaces provided.

5 Marta works at the beach office.
She needs to buy a new surfboard for the lifeguards.

The surfboard must be 6 feet in length.

Marta uses this formula to convert feet into metres.

What is 6 feet in metres?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Multiply length in feet (6) by 30:

- *6 × 30 = 180 [M1]*

Step 2: Divide result by 100 to convert to metres:

- *180 ÷ 100 = 1.8 metres [M1]*

Step 3: State final converted length:

- *6 feet = 1.8 metres (or 1 4/5 m) [A1]*

Show your check in the box below.

☑

Reverse Calculation Check:

- *Reverse multiplication: 1.8 × 100 = 180 [B1]*
- *Reverse division: 180 ÷ 30 = 6 feet (matches original length)*

(Total for Question 5 is 4 marks)

6 Marta manages the rentals of beach huts.

There are 96 beach huts.
24 of these beach huts are available to rent.

Marta thinks that $\frac{1}{4}$ of the beach huts are available to rent.

Is Marta correct?
Show why you think this. **(2)**

Use the box below to show clearly how you get your answer.

Step 1: Write the fraction of available beach huts:

- *Fraction = Available huts ÷ Total huts*
- **Fraction = 24 / 96 [M1]**

Step 2: Simplify the fraction to simplest form:

- *Divide top and bottom by 12: 24 ÷ 12 = 2, 96 ÷ 12 = 8 -> 2 / 8*
- **Divide by 2: 2 ÷ 2 = 1, 8 ÷ 2 = 4 -> 1 / 4 [M1]**

  Direct division by 24: 24 ÷ 24 = 1, 96 ÷ 24 = 4 -> 1 / 4

Step 3: Alternative calculation (Find 1/4 of 96):

- **1/4 of 96 = 96 ÷ 4 = 24 huts**
- *Decimal conversion: 24 ÷ 96 = 0.25; 1 ÷ 4 = 0.25*

Step 4: Conclusion:

Therefore, Yes, Marta is correct (exactly 1/4 are available). [A1]

(Total for Question 6 is 2 marks)

DO NOT WRITE IN THIS AREA

7 The opening hours for the beach office change during the year.

These are the opening times for the beach office.

Peak season	
Monday to Sunday	9.30 am to 6.30 pm
Off-peak season	
Monday to Friday	9.30 am to 3.30 pm
Saturday and Sunday	closed

Marta wants to compare the number of hours the office is open each week for the two seasons.

(a) For how many more hours is the office open **each week** in the peak season than in the off-peak season? **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate daily opening hours for each season:

- **Peak season: 9.30 am to 6.30 pm = 9 hours per day [M1]**

  Working: 9.30am-12.30pm = 3h; 12.30pm-6.30pm = 6h -> 3 + 6 = 9 hrs

- **Off-peak season: 9.30 am to 3.30 pm = 6 hours per day**

Step 2: Calculate weekly opening hours for both seasons:

- Peak season (Mon to Sun = 7 days):

  7 days × 9 hours = 63 hours open per week [M1]

- Off-peak season (Mon to Fri = 5 days, Sat & Sun closed):

  5 days × 6 hours = 30 hours open per week [M1]

Step 3: Calculate difference between the two seasons:

- Difference = Peak weekly hours − Off-peak weekly hours
- **Difference = 63 − 30 = 33 hours more [A1]**

Step 4: Summary answer:

- **Office is open 33 more hours per week in peak season. [A1]**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Alternative Daily Difference Method & Weekly Schedule Matrix:

Day of Week	Peak Hours	Off-Peak Hours	Extra Hours
Monday	9.30am - 6.30pm (9h)	9.30am - 3.30pm (6h)	+ 3 hours
Tuesday	9.30am - 6.30pm (9h)	9.30am - 3.30pm (6h)	+ 3 hours
Wednesday	9.30am - 6.30pm (9h)	9.30am - 3.30pm (6h)	+ 3 hours
Thursday	9.30am - 6.30pm (9h)	9.30am - 3.30pm (6h)	+ 3 hours
Friday	9.30am - 6.30pm (9h)	9.30am - 3.30pm (6h)	+ 3 hours
Saturday	9.30am - 6.30pm (9h)	Closed (0h)	+ 9 hours
Sunday	9.30am - 6.30pm (9h)	Closed (0h)	+ 9 hours

Alternative Method: Summing the daily differences:

- Weekdays (Mon to Fri): 5 days × 3 hours extra = 15 hours extra [M1]
- Weekend (Sat & Sun): 2 days × 9 hours extra = 18 hours extra [M1]
- **Total extra hours = 15 + 18 = 33 hours extra [A1]**

Reverse Check & Verification:

- Reverse check: 30 + 33 = 63 hours (matches peak total) [B1]
- Percentage increase: (33 ÷ 30) × 100 = 110% more hours in peak season!

Marta needs to cover the whole floor in 3 of the beach huts with tiles.

The floor in each beach hut is rectangular 400 cm by 200 cm.
Each tile is square 50 cm by 50 cm.

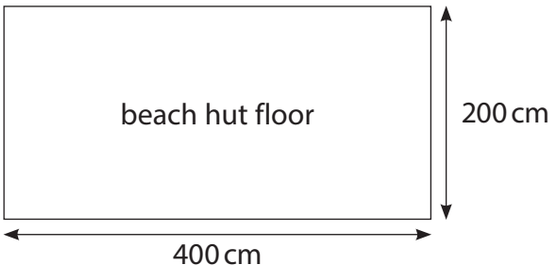

Diagram **not** accurately drawn

Each tile costs £8.99

Marta has £850 to spend on the tiles.

(b) Is £850 enough to buy all the tiles Marta needs?

(6)

Use the box below to show clearly how you get your answer.

Step 1: Calculate number of tiles needed for ONE beach hut floor:

- **Along the length: 400 cm ÷ 50 cm = 8 tiles along length [M1]**
- **Along the width: 200 cm ÷ 50 cm = 4 tiles along width [M1]**
- **Tiles per hut = 8 × 4 = 32 tiles per beach hut [M1]**

Step 2: Calculate total tiles needed for all 3 beach huts:

- **Total tiles = 3 huts × 32 tiles = 96 tiles in total [M1]**

Step 3: Calculate total cost of 96 tiles @ £8.99 each:

- **Total cost = 96 × £8.99 = £863.04 [M1]**

  Working: 96 × £9 = £864; 96 × 1p = £0.96 -> £864 − £0.96 = £863.04

Step 4: Compare total cost with Marta's budget of £850:

- **£863.04 needed > £850 available (she is £13.04 short!).**
- *Difference = £863.04 − £850.00 = £13.04 short.*

Therefore, No, £850 is NOT enough to buy all 96 tiles. [A1]

Alternative Tiling Methods & Visual Grid Breakdown:

Method 2: Floor Area vs Tile Area Method:

- Floor area of 1 hut = 400 cm × 200 cm = 80,000 cm² [M1]
- Area of 1 square tile = 50 cm × 50 cm = 2,500 cm²
- Tiles per hut = 80,000 ÷ 2,500 = 32 tiles
- 3 huts = 3 × 32 = 96 tiles -> 96 × £8.99 = £863.04

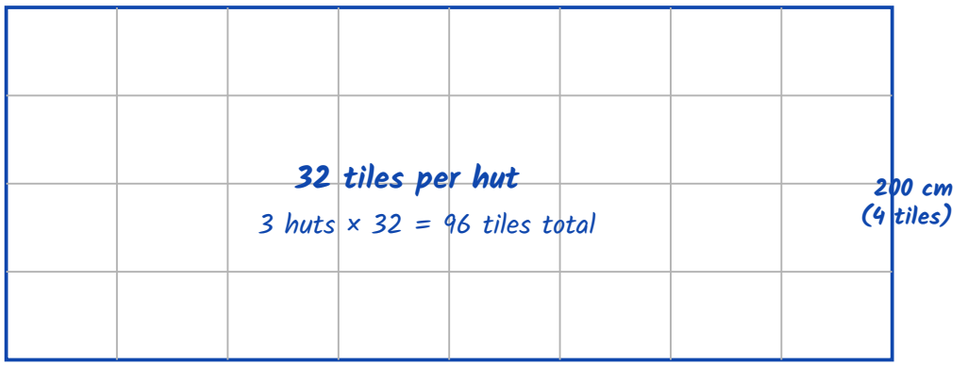

Method 3: Maximum Tiles Afforded from Budget:

- Number of tiles £850 can buy = £850 ÷ £8.99 = 94.549... tiles [M1]
- Marta can only afford 94 whole tiles (needs 96 tiles).
- 94 tiles < 96 tiles (she is 2 full tiles short!).

Conclusion confirmed: £850 is not enough. [A1]

Visual Floor Tile Layout for One Beach Hut (8 × 4 = 32 tiles):

400 cm (8 tiles of 50 cm)

(Total for Question 7 is 10 marks)

Section C: At a cinema

Answer the questions in this section.

Write your answers in the spaces provided.

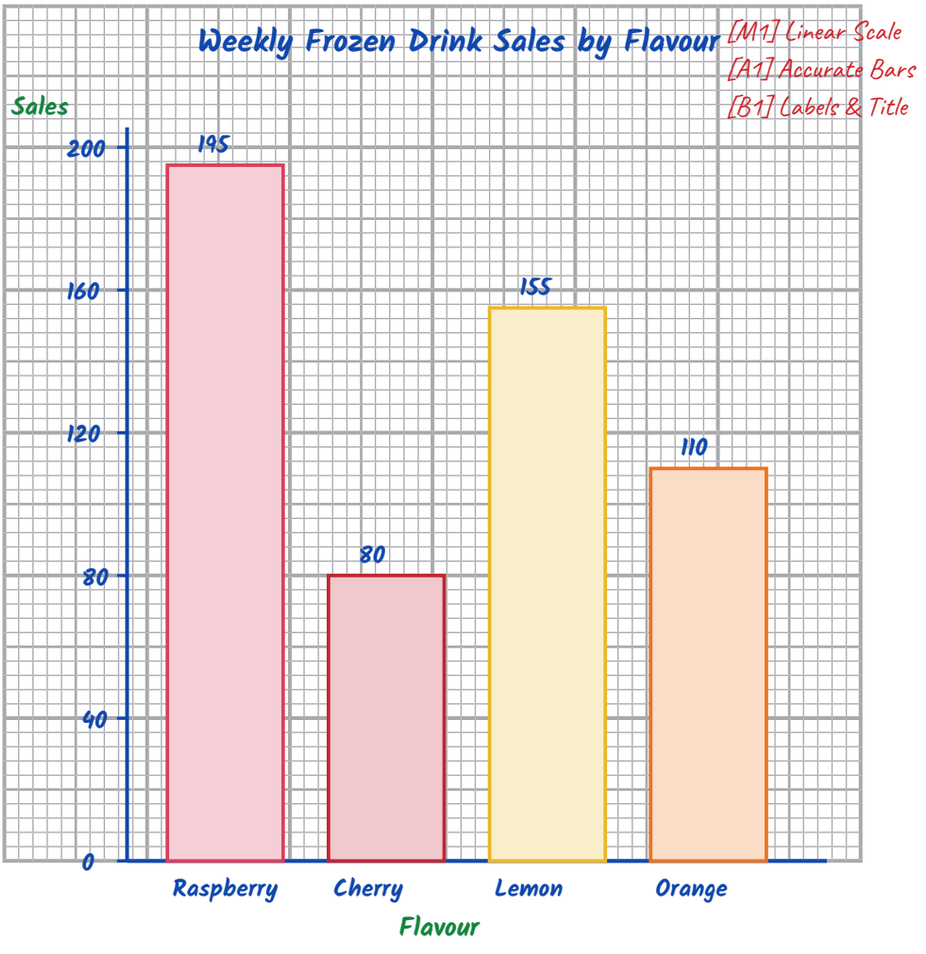

8 Teddy works at a cinema.
He sells frozen drinks in 4 different flavours.

Teddy wants to compare the number of sales of each flavour.
He has this information about the sales last week.

flavour	raspberry	cherry	lemon	orange
number of sales	195	80	155	110

(a) Draw a graph or chart to compare the number of sales of each flavour last week. **(3)**

Use the graph paper below to draw your graph or chart.

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Teddy has a machine to make fizzy drinks.
The machine uses 1 part syrup to 5 parts water to make each drink.

A medium drink is 500 ml.

Teddy has 7 litres of syrup for the machine.
He thinks this is enough syrup to make 85 medium drinks.

(b) Is Teddy correct?
Show why you think this. **(5)**

Use the box below to show clearly how you get your answer.

Step 1: Convert syrup volume to millilitres (consistent units):

- 1 litre = 1,000 ml
- **7 litres = 7 × 1,000 = 7,000 ml of syrup [M1]**

Step 2: Understand the drink ratio (1 part syrup : 5 parts water):

- **Total parts = 1 + 5 = 6 parts in each medium drink [M1]**
- Fraction of drink that is syrup = 1 / 6
- **Syrup per 500 ml medium drink = 500 ÷ 6 = 83.33... ml [M1]**

Step 3: Calculate total syrup needed to make 85 medium drinks:

- **Syrup needed = 85 × 83.33 ml = 7,083.33 ml [M1]**

  Working: 85 × (500 ÷ 6) = 42,500 ÷ 6 = 7,083.33 ml (7.083 litres)

Step 4: Alternative method (How many drinks can 7,000 ml make?):

- **Drinks with 7,000 ml = 7,000 ÷ 83.33 = 84 drinks [M1]**

  Working: (7,000 × 6) ÷ 500 = 42,000 ÷ 500 = 84 full drinks (< 85 drinks)

Step 5: Compare available syrup with syrup needed:

- **7,000 ml available < 7,083.33 ml needed (short by 83.33 ml).**

Therefore, No, Teddy is NOT correct (syrup is not enough). [A1]

(Total for Question 8 is 8 marks)

9 Reece goes to see a film at the cinema.
He wants to buy a large drink and a large popcorn.

Reece sees this price list and a special offer.

Price list

	small	medium	large
drink	£1.99	£2.99	£3.99
popcorn	£2.49	£3.49	£4.49

Special offer!

Get a large drink and a large popcorn for £7.50

(a) How much will Reece save using the special offer to buy his large drink and large popcorn?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate normal price of large drink and large popcorn:

- *Large drink = £3.99*
- *Large popcorn = £4.49*
- ***Total normal cost = £3.99 + £4.49 = £8.48 [M1]***

Step 2: Calculate savings with special offer of £7.50:

- *Special offer price = £7.50*
- *Saving = Normal cost – Special offer price*
- ***Saving = £8.48 – £7.50 = £0.98 (or 98p) [M1]***

Step 3: State final answer with correct money notation:

- ***Reece will save £0.98 (98p). [A1]***

Show your check in the box below.

☑

Reverse Calculation Check:

- ***Reverse addition: £7.50 + £0.98 = £8.48 [B1]***
- *Reverse subtraction: £8.48 – £4.49 = £3.99 (matches large drink price)*

Reece wants to know what time he will get to the bus stop after the film finishes.

The film
- starts at 3.30 pm
- lasts for 135 minutes.

It will take Reece 10 minutes to get to the bus stop from when the film finishes.

Reece thinks he will get to the bus stop at 5.50 pm.

(b) Is Reece correct?
Show why you think this. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Convert film duration (135 mins) into hours and minutes:

- 60 minutes = 1 hour -> 120 minutes = 2 hours [M1]
- **135 minutes = 120 mins + 15 mins = 2 hours 15 minutes**

Step 2: Calculate the time the film finishes:

- Film starts at 3.30 pm
- 3.30 pm + 2 hours = 5.30 pm
- **5.30 pm + 15 minutes = 5.45 pm (film finish time) [M1]**

Step 3: Add walking time to the bus stop (10 minutes):

- **Bus arrival time = 5.45 pm + 10 minutes = 5.55 pm [M1]**

Alternative total time: 135 mins + 10 mins = 145 mins = 2h 25m -> 3.30 + 2h 25m = 5.55 pm

Step 4: Compare with Reece's estimate of 5.50 pm:

- **5.55 pm ≠ 5.50 pm (he arrives at 5.55 pm, which is 5 mins later).**

Therefore, No, Reece is NOT correct. [A1]

(Total for Question 9 is 8 marks)
