Time: 25 minutes | Paper Reference **PMAT1/N10**

## Mathematics

**Level 1**
**Section A (Non-Calculator)**

**You must have:**
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses. Tracing paper may be used.

Total Marks
14 /14

**My signature confirms that I will not discuss the content of the test with anyone.**

**Signature:** Master Functional Skills (MFS)

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and answers at each stage.
- Diagrams are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used**.
- Take the value of $\pi$ to be 3.14

### Information

- The total mark for this section is 14.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

### Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

# MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

## Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

## 1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

## 2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

## 3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

## Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

## SECTION A

**Answer ALL questions.**
**Write your answers in the spaces provided.**

**1** Samira reads the results of a holiday survey.

> We asked 860 people about their holidays.
>
> 15% of these people said that Greece was their favourite holiday destination.

Samira thinks that more than 100 people said that Greece was their favourite holiday destination.

Is she correct?
You **must** show your working.

**(3)**

Step 1: Calculate 15% of 860 people using non-calculator breakdown:

- 10% of 860 = 860 ÷ 10 = 86 people [M1]
- 5% of 860 = 86 ÷ 2 = 43 people
- 15% of 860 = 86 + 43 = 129 people [M1]

Step 2: Compare with Samira's statement (more than 100 people):

- 129 > 100 (129 is 29 people more than 100)
- Yes, Samira is correct. [A1]

Alternative Check: 0.15 × 860 = 86 + 43 = 129 people (Confirmed)

[A1]

Yes (129)

**(Total for Question 1 is 3 marks)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**2** Norbert is a doctor.
He starts his first shift of the week on Monday at 8 pm.
The shift lasts 12 hours.

Norbert then has 30 hours off work.
He then starts his second shift of the week.

Work out the day and time Norbert starts his second shift of the week.

**(3)**

**Step 1: Calculate the end of Norbert's first shift:**

- **Monday 8:00 pm + 12 hours = Tuesday 8:00 am [M1]**

**Step 2: Add 30 hours off work (split into 24 hours + 6 hours):**

- 30 hours = 24 hours (1 full day) + 6 hours
- Tuesday 8:00 am + 24 hours = Wednesday 8:00 am
- **Wed 8:00 am + 6 hours = Wed 2:00 pm (14:00) [M1]**

**Alternative Method Check (Total Elapsed Hours):**

- Total time from start = 12 h + 30 h = 42 hours
- 42 h = 24 h (1 day) + 18 h
- Mon 8 pm + 24 h = Tue 8 pm; + 18 h = Wed 2 pm [A1]

[A1]

Day: **2 pm**

[A1]

Time: **Wednesday**

**(Total for Question 2 is 3 marks)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**3** Here are some numbers.

147 116 213 394 178 312

(a) Work out the range of these numbers.

**(2)**

Definition of Range = Highest value – Lowest value:

- Highest value = 394; Lowest value = 116 [M1]
- Range = 394 – 116 = 278 [A1]

Check: 278 + 116 = 394 (Confirmed)

[A1]

**278**

(b) Round 4.749 to 1 decimal place.

**(1)**

Round 4.749 to 1 decimal place (tenths):

- 2nd decimal place is 4 (< 5) --> round down: 4.7 [B1]

**4.7** [B1]

(c) Convert 0.9 kilogram into grams.

**(1)**

Convert kilograms to grams (1 kg = 1000 g --> multiply by 1000):

- 0.9 × 1000 = 900 g [B1]

[B1]

**900** grams

**(Total for Question 3 is 4 marks)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**4** Zac is a hotel manager.
He knows that 3 out of every 5 guests usually order room service on a Saturday.

There are 624 guests staying at the hotel this Saturday.

(a) Use **estimation** to work out the number of guests Zac expects to order room service this Saturday.
You **must** show your working.

**(3)**

*Step 1: Round figures to convenient manageable numbers for estimation:*

- *Round total guests: 624 ≈ 600 guests (nearest hundred) [M1]*

*Step 2: Calculate 3/5 of 600 guests:*

- *Divide by denominator: 600 ÷ 5 = 120 guests [M1]*
- *Multiply by numerator: 120 × 3 = 360 guests [A1]*

*Alternative Rounding: 3/5 ≈ 1/2; 1/2 of 600 = 300 guests (also accepted in MS)*

*[A1]*

**360** guests

(b) Use a reverse calculation to show a check of your answer.

**(1)**

*Reverse check using multiplication (inverse of division 600 ÷ 5 = 120):*

- *120 × 5 = 600 guests (or 360 ÷ 3 = 120; 120 × 5 = 600) [B1]*

*[B1]*

**120 × 5 = 600**

**(Total for Question 4 is 4 marks)**

## SECTION B

**Answer ALL questions.**
**Write your answers in the spaces provided.**

**1** Inka looks at the performance reports for 2020 from three companies.

Company A made three quarters of a million pounds profit.

Company B made £648 900 profit.

Company C made seven hundred and twenty-five thousand pounds profit.

(a) Which company made the most profit in 2020?
Show why you think this.

**(2)**

Step 1: Write all company profits in numerical figures (£):

- Co. A: 3/4 × £1 000 000 = £750 000 [M1]
- Co. B: £648 900; Co. C: £725 000

Step 2: Compare profits in descending order to find the greatest:

- £750 000 > £725 000 > £648 900
- Company A made the most profit (£750 000). [A1]

[A1]

Company A

Here are some numbers.

2.89 2.39 3.09 2.41 2.9

(b) Write these numbers in order of size.
Start with the smallest number.

**(1)**

Compare place values (units, tenths, hundredths):

2.39, 2.41, 2.89, 2.9, 3.09 [B1]

Smallest --> Largest (Note: 2.9 = 2.90)

**(Total for Question 1 is 3 marks)**

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

**2** Alex and Seamus play golf.

Alex played 90 games of golf last year.
She won 60% of these games.

Seamus played 80 games of golf last year.
He won 55% of these games.

Alex thinks that last year she won 12 more games than Seamus did.

Is she correct?
Show why you think this.

**(4)**

Step 1: Calculate games won by Alex (60% of 90 games):

- Alex wins = 0.60 × 90 = 54 games won [M1]

Step 2: Calculate games won by Seamus (55% of 80 games):

- Seamus wins = 0.55 × 80 = 44 games won [M1]

Step 3: Calculate the difference between their wins:

- Difference = 54 − 44 = 10 games [M1]

Step 4: Compare with Alex's statement (12 more games):

- 10 ≠ 12 (Alex won 10 more games, not 12)
- No, Alex is not correct. [A1]

Alternative Comparison Check:

- Check: 44 + 12 = 56 games (Alex won 54 games) (Confirmed)

[A1]

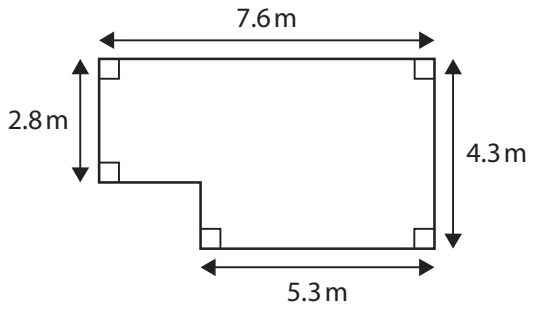

No (won 10 more, not 12)

**(Total for Question 2 is 4 marks)**

**3** Akeem wants to put wooden flooring in a room.

He has this sketch of the floor in the room.

Akeem will buy the wooden flooring in packs.
Each pack covers an area of 0.4 $m^2$

Akeem can cut and join the flooring.

Work out the number of packs of wooden flooring Akeem needs to buy.

**(5)**

*Step 1: Find the missing side lengths of the compound L-shape:*

- *Missing horizontal length = 7.6 m − 5.3 m = 2.3 m [M1]*
- *Missing vertical length = 4.3 m − 2.8 m = 1.5 m*

*Step 2: Method 1 — Split the room into two rectangles (A and B):*

- *Rectangle A (left part) = 5.3 m × 4.3 m = 22.79 $m^2$ [M1]*
- *Rectangle B (right part) = 2.3 m × 2.8 m = 6.44 $m^2$*
- *Total Floor Area = 22.79 + 6.44 = 29.23 $m^2$ [M1]*

*Method 2 Check (Outer Rectangle − Cutout):*

- *Outer rectangle = 7.6 m × 4.3 m = 32.68 $m^2$*
- *Cutout corner = 2.3 m × 1.5 m = 3.45 $m^2$*
- *Total Floor Area = 32.68 − 3.45 = 29.23 $m^2$ (Matches perfectly!)*

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**Step 3: Calculate the number of packs needed (Area ÷ pack coverage):**

- Total floor area = 29.23 $m^2$
- Each pack covers = 0.4 $m^2$
- **Number of packs = 29.23 ÷ 0.4 = 73.075 packs [M1]**

**Step 4: Interpret the practical context (buying whole packs):**

- You cannot purchase a fraction of a pack.
- 73 packs cover 73 × 0.4 = 29.2 $m^2$ (not enough, 0.03 $m^2$ short!)
- **Therefore, must round UP to 74 full packs. [A1]**

**Coverage Verification Check:**

- 74 packs × 0.4 $m^2$ = 29.6 $m^2$
- 29.6 $m^2$ > 29.23 $m^2$ (Provides full floor coverage with offcuts)

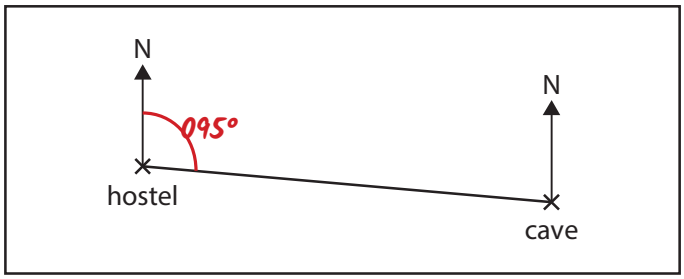

[A1]

**74** packs

**(Total for Question 3 is 5 marks)**

**5** Jesse is the head of sport at a college.

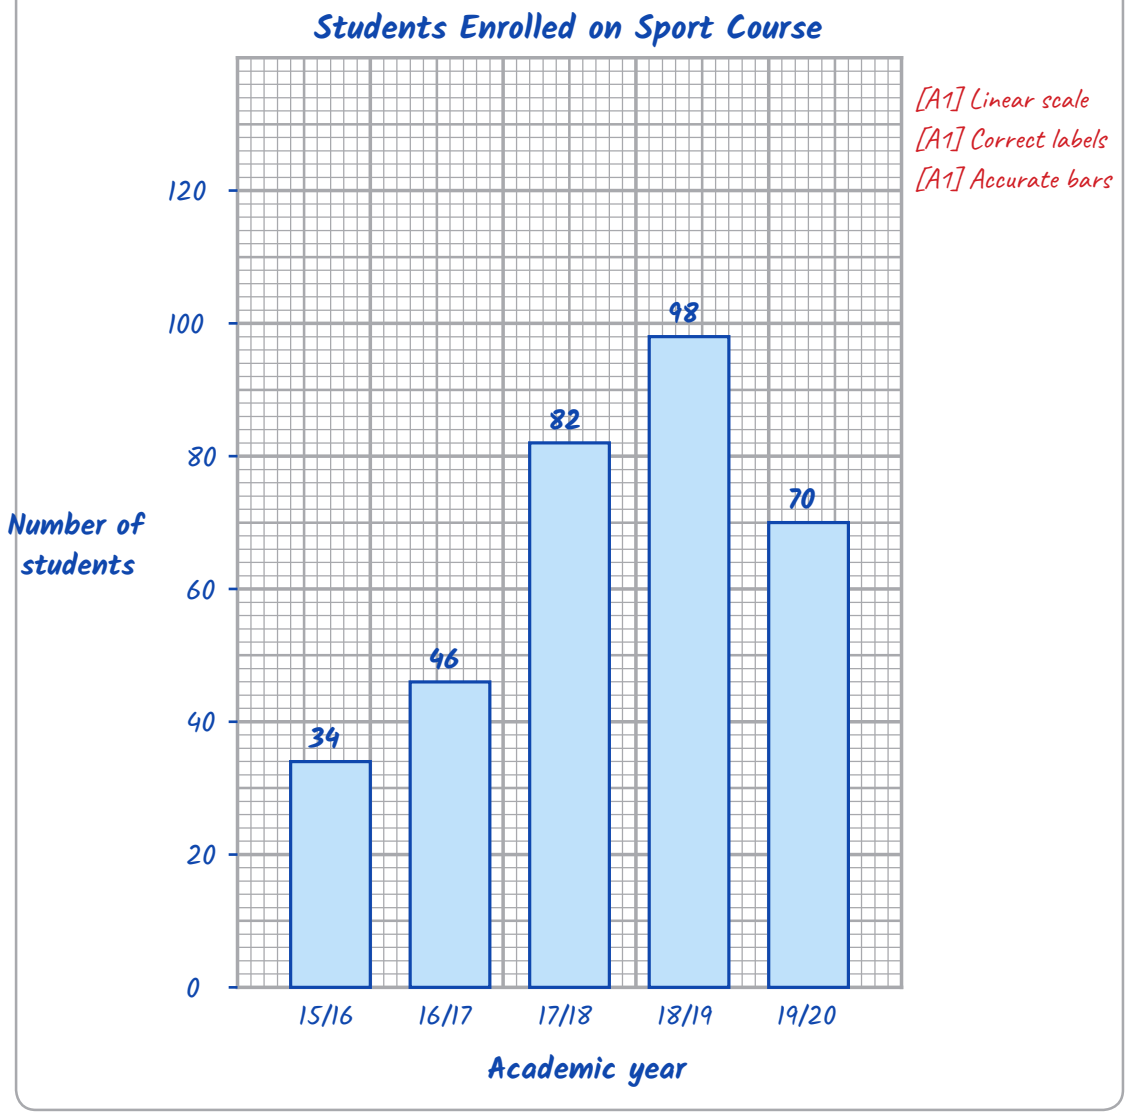

He has data about the number of students studying sport for the five academic years.

| **academic year** | 15/16 | 16/17 | 17/18 | 18/19 | 19/20 |
|---|---|---|---|---|---|
| **number of students** | 34 | 46 | 82 | 98 | 70 |

Jesse will show this data in a bar chart at a staff conference.

Draw a suitable bar chart for Jesse.

**(3)**

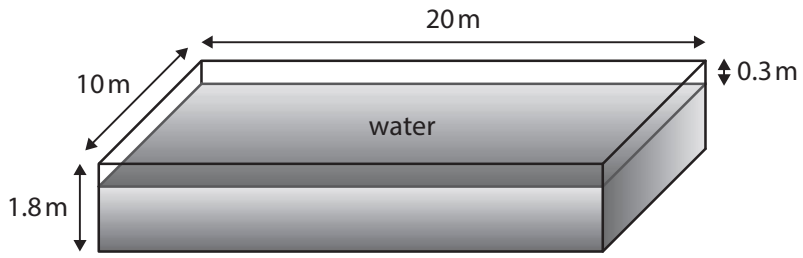

**(Total for Question 5 is 3 marks)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**6** Zelda works in a spa.
She takes care of the swimming pool.

The swimming pool is in the shape of a cuboid.
The water level in the swimming pool is 0.3 m below the top of the pool.

Zelda knows $1\,m^3 = 1000$ litres.

She needs to put chlorine powder in the water.

Zelda uses this rule to work out how much chlorine powder she needs.

volume of water (litres) → divide by 5000 → multiply by 56 → chlorine powder needed (grams)

Work out how much chlorine powder Zelda needs to put in the water.

**(6)**

*Step 1: Calculate the depth of water in the swimming pool:*

- Water depth = 1.8 m − 0.3 m = 1.5 m [M1]

*Step 2: Calculate the volume of water in cubic metres ($m^3$):*

- Volume = Length × Width × Depth
- Volume = 20 m × 10 m × 1.5 m = 300 $m^3$ [M1]

*Step 3: Convert volume from cubic metres to litres (1 $m^3$ = 1000 L):*

- Volume in litres = 300 × 1000 = 300 000 litres [M1]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

**Step 4: Apply the chlorine powder dosage formula:**

- Chlorine powder (g) = (Volume in litres ÷ 5000) × 56
- **Part 1 (divide by 5000): 300 000 ÷ 5000 = 60 [M1]**
- **Part 2 (multiply by 56): 60 × 56 = 3360 grams [M1]**

**Step 5: Verify using combined multiplication factor:**

- Dosage per $m^3$ = 1000 ÷ 5000 × 56 = 0.2 × 56 = 11.2 g per $m^3$
- **300 $m^3$ × 11.2 g/$m^3$ = 3360 grams (Confirmed)**

**Reverse Calculation Check:**

- 3360 ÷ 56 = 60; 60 × 5000 = 300 000 litres (Verified)

[A1]

**3360** grams

**(Total for Question 6 is 6 marks)**

**7** Tom looks at a map.
1 cm on the map represents 3 km on the ground.

The distance between two cities on the map is 5 cm.

(a) Work out the actual distance between the two cities.

**(1)**

Scale factor: 1 cm on map represents 3 km on ground

• Actual distance = 5 × 3 = 15 km [B1]

[B1]

15 km

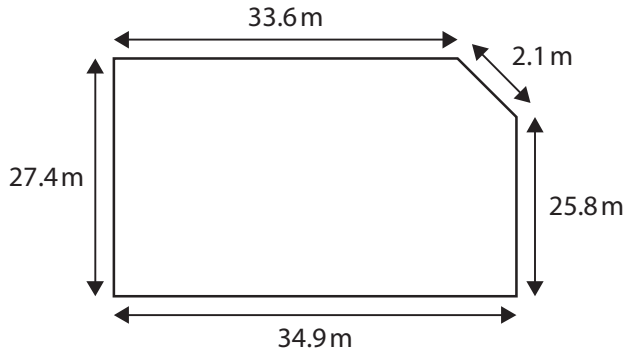

(b) How many lines of symmetry does a square have?

**(1)**

A square has 4 lines of symmetry (2 perpendicular + 2 diagonal):

4 [B1]

Here is the front elevation of a building.

(c) What is the greatest height of the building?

**(1)**

Compare vertical height dimensions shown on front elevation:

• Heights: 25.8 m and 27.4 m (34.9 m is width)

• Greatest height = 27.4 m [B1]

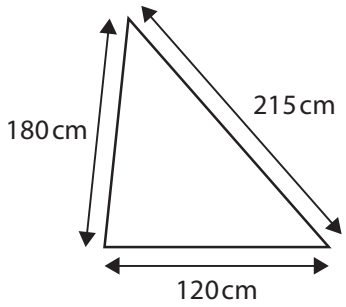

[B1]

27.4 m

**8** Maya designs a flower bed.
She has this sketch of the flower bed.

Maya will put an edging along each side of the flower bed.

(a) Work out the total length of the edging Maya needs.

**(2)**

Step 1: Recall definition of perimeter (total distance around boundary):

- Perimeter = Side 1 + Side 2 + Side 3
- Perimeter = 120 cm + 180 cm + 215 cm [M1]
- 120 + 180 = 300; 300 + 215 = 515 cm [A1]

[A1]

515 cm

(b) Show a check of your answer.

**(1)**

Reverse calculation check (subtraction):

- 515 − 215 = 300 cm [B1] [B1]
- 300 − 180 = 120 cm (Matches original side length perfectly)

**(Total for Question 8 is 3 marks)**

**9** Tim makes sandwiches in a cafe.
The sandwiches can only be sold on the day they are made.

The table shows the number of sandwiches Tim did not sell last week.

| **day** | Mon | Tue | Wed | Thu | Fri | Sat | Sun |
|---|---|---|---|---|---|---|---|
| **number of sandwiches** | 15 | 26 | 9 | 11 | 20 | 16 | 1 |

The cost of making each sandwich is £1.95

Tim thinks the mean cost of making the sandwiches he did not sell last week was more than £25 per day.

Is he correct?
Show why you think this.

**(4)**

Step 1: Calculate total number of unsold sandwiches across 7 days:

- Total unsold = 15+26+9+11+20+16+1 = 98 [M1]

Step 2: Calculate mean number of unsold sandwiches per day:

- Mean per day = 98 ÷ 7 = 14 sandwiches [M1]

Step 3: Calculate mean cost per day (14 × £1.95):

- Mean cost = 14 × £1.95 = £27.30 per day [M1]

Step 4: Compare with Tim's statement (more than £25 per day):

- £27.30 > £25.00 (exceeds target by £2.30 per day)
- Yes, Tim is correct. [A1]

Alternative Method Check (Total Cost First):

- Total cost = 98 × £1.95 = £191.10
- Mean cost = £191.10 ÷ 7 = £27.30 per day (Confirmed)

[A1]

Yes (£27.30 > £25)

**10** Colin has this data about the number of treadmills in several gyms.

| | | | | | |
|---|---|---|---|---|---|
| 6 | 11 | 5 | 12 | 7 | 15 |
| 13 | 4 | 8 | 10 | 12 | 14 |

Colin begins to design a grouped frequency table to show this data.
He will use 3 groups of equal size.

Complete the grouped frequency table for Colin.

**(3)**

| number of treadmills | tally | frequency |
|---|---|---|
| 1 to 5 | II | 2 |
| 6 to 10 | IIII | 4 |
| 11 to 15 [B1] | ~~HHT~~ I [M1] | 6 [A1] |

Step 1: Order the raw data to ensure no values are missed:

- Sorted data (12 values): 4, 5 | 6, 7, 8, 10 | 11, 12, 12, 13, 14, 15

Step 2: Verify frequency sum equals total number of data points:

- Total gyms = 2 + 4 + 6 = 12 gyms (All 12 values accounted for)

**11** Ashley wants to a buy a wall clock.
She finds these two offers.

Ashley thinks she will save less than 50p if she uses offer B rather than offer A.

Is Ashley correct?
Show why you think this.

**(5)**

**Step 1: Calculate Offer A sale price (45% off £31.80):**

- **Discount = 45% of £31.80 = 0.45 × £31.80 = £14.31 [M1]**
- **Sale Price A = £31.80 − £14.31 = £17.49 [M1]**

*(Or directly: 100% − 45% = 55%; 0.55 × £31.80 = £17.49)*

**Step 2: Calculate Offer B sale price (half price of £34.50):**

- **Sale Price B = £34.50 ÷ 2 = £17.25 [M1]**

**Step 3: Calculate the saving of Offer B compared to Offer A:**

- **Difference = £17.49 − £17.25 = £0.24 (24p) [M1]**

**Step 4: Compare saving with Ashley's claim (save less than 50p):**

- **24p < 50p (or £0.24 < £0.50)**
- **Yes, Ashley is correct — she saves 24p (< 50p). [A1]**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
