Master Functional Skills	Model Solutions (MFS)

Pearson Edexcel Functional Skills

Centre Number	Candidate Number
MFS-UK	FSM01/01

Mathematics

Level 1

8 – 12 January 2018
Time: 1 hour 30 minutes

Paper Reference
FSM01/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A: Rowing

Answer all questions in this section.

Write your answers in the spaces provided.

1 Luke is a member of a rowing club.
The rowing club organises a charity event using indoor rowing machines.

The table shows the time it took Luke to row 10 km in 6 training sessions.

Time taken (minutes)	54	52	47	51	45	42

Luke can enter the rowing event if his mean time to row 10 km is less than 50 minutes.

(a) Is his mean time to row 10 km less than 50 minutes?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total rowing time across all 6 sessions:

- *Total = 54 + 52 + 47 + 51 + 45 + 42 = 291 minutes [M1]*

  Working: (54 + 52) + (47 + 51) + (45 + 42) = 106 + 98 + 87 = 291 mins

Step 2: Calculate the mean time (Total ÷ 6 sessions):

- *Mean = 291 ÷ 6 = 48.5 minutes (48 mins 30 secs) [M1]*

Step 3: Compare mean time with 50 minutes target:

- *48.5 mins < 50 mins (he beats target by 1.5 minutes).*
- *Alternative: 50 × 6 = 300 mins; 291 mins < 300 mins.*

Therefore, Yes, his mean time is less than 50 minutes. [A1]

Use the box below to show your check.

☑

Reverse Calculation Check:

- *Reverse multiplication: 48.5 × 6 = 291 minutes [B1]*
- *Subtraction check: 291 − (52 + 47 + 51 + 45 + 42) = 54 mins (matches session 1)*

DO NOT WRITE IN THIS AREA

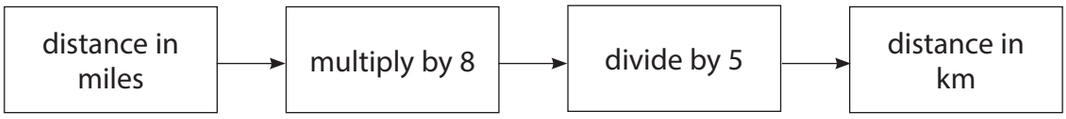

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Teams take part in the rowing event.
Each team must row a total distance of 67 miles.

The indoor rowing machines show the distance rowed in kilometres (km).

Luke uses this rule to change miles into km.

Luke thinks 67 miles is the same distance as 110 km.

(b) Is Luke correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Apply the conversion rule to 67 miles:

- Rule: Distance in miles × 8 ÷ 5 = Distance in km
- **Multiply by 8: 67 × 8 = 536 [M1]**

Step 2: Divide result by 5 to find distance in km:

- **536 ÷ 5 = 107.2 km [M1]**

  Working: 500 ÷ 5 = 100, 35 ÷ 5 = 7, 1 ÷ 5 = 0.2 -> 107.2 km

Step 3: Compare with Luke's thought of 110 km:

- **107.2 km ≠ 110 km (actual distance is 2.8 km shorter).**

Therefore, No, Luke is NOT correct. [A1]

Alternative Method (Converting 110 km back to miles):

- **Reverse rule: 110 km × 5 ÷ 8 = 550 ÷ 8 = 68.75 miles**
- 68.75 miles ≠ 67 miles (proves Luke is incorrect).

(Total for Question 1 is 7 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

2 Luke wants to make some snacks for the rowing event.
He has these lists of ingredients.

Energy bars (makes 8 bars)

1 tbsp oil
3 bananas
1 tbsp honey
1 tbsp peanut butter
280g oats
2 tbsp mixed seeds

Smoothie (each)

1 banana
300ml skimmed milk
30g oats
100g plain yoghurt
140g mixed berries

Luke has 2kg of oats.
He will make 4 smoothies.

Luke also wants to make 50 energy bars to sell at the event.

Does Luke have enough oats to make 4 smoothies and 50 energy bars?

(5)

Use the box below to show clearly how you get your answer.

Step 1: Convert total oats to grams (consistent units):

- *1 kg = 1,000 g -> 2 kg = 2,000 g of oats available [B1]*

Step 2: Calculate oats needed for 4 smoothies:

- *1 smoothie needs 30 g oats*
- *4 smoothies = 4 × 30 g = 120 g oats [M1]*

Step 3: Calculate oats needed for 50 energy bars:

- *8 energy bars need 280 g oats -> 1 bar = 280 ÷ 8 = 35 g oats [M1]*
- *50 bars = 50 × 35 g = 1,750 g oats [M1]*

Step 4: Calculate total oats needed and compare with 2,000 g:

- *Total oats needed = 120 g + 1,750 g = 1,870 g oats*
- *1,870 g needed < 2,000 g available (he has 130 g oats left over!).*

Therefore, Yes, Luke has enough oats. [A1]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Alternative Proportion Methods & Ingredient Allocation Matrix:

Method 2: Batch Scaling Method for Energy Bars:

- 1 batch = 8 energy bars
- **Batches needed for 50 bars = 50 ÷ 8 = 6.25 batches [M1]**
- **Oats for 6.25 batches = 6.25 × 280 g = 1,750 g oats [M1]**
- **1,750 g + 120 g = 1,870 g < 2,000 g -> Yes, enough oats. [A1]**

Method 3: Maximum Energy Bars Afforded from Remaining Oats:

- **Oats remaining after smoothies = 2,000 g − 120 g = 1,880 g oats**
- **Bars possible = 1,880 g ÷ 35 g per bar = 53.7 bars [M1]**
- 53 full bars > 50 bars needed -> Luke can make all 50 bars with oats to spare.

Comprehensive Oats Allocation Summary Table:

Snack Item	Quantity / Recipe	Oats Needed (g)
Smoothies	4 drinks @ 30 g each	120 g
Energy Bars	50 bars @ 35 g each	1,750 g
Total Required	4 smoothies + 50 bars	1,870 g
Oats Available	2 kg packet	2,000 g (130 g spare)

Reverse Check & Verification:

- **2,000 g − 1,750 g = 250 g remaining**
- **250 g ÷ 30 g = 8.33 smoothies (> 4 needed) [B1]**

(Total for Question 2 is 5 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

3 The table shows the amount of money collected by each team for the rowing event.

Team	Amount collected
A	£2347
B	£3862
C	£3581
D	£1954

Luke was in team A.
He says

> Team A collected $\frac{1}{5}$ of the total amount.

(a) Is $\frac{1}{5}$ of the total amount of money collected £2347?

(3)

Use the box below to show clearly how you get your answer.

Step 1: Calculate the total money collected by all 4 teams:

- **Total = £2,347 + £3,862 + £3,581 + £1,954 = £11,744 [M1]**

  Working: (2,347 + 3,862) + (3,581 + 1,954) = 6,209 + 5,535 = £11,744

Step 2: Calculate 1/5 of the total amount collected:

- **1/5 of £11,744 = £11,744 ÷ 5 = £2,348.80 [M1]**

  Working: 10,000 ÷ 5 = 2,000; 1,500 ÷ 5 = 300; 244 ÷ 5 = 48.80 -> £2,348.80

Step 3: Compare with Team A's collected amount (£2,347):

- **£2,348.80 ≠ £2,347 (Team A is £1.80 short of exactly 1/5).**
- *Alternative: £2,347 × 5 = £11,735 ≠ £11,744 (short by £9 across 5 teams).*

Conclusion: No, 1/5 of the total is £2,348.80, not £2,347. [A1]

(Note: Mark scheme also accepts "Yes, almost/nearly", as it is within £1.80).

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

The rowing club is writing a cheque to present to the charity.

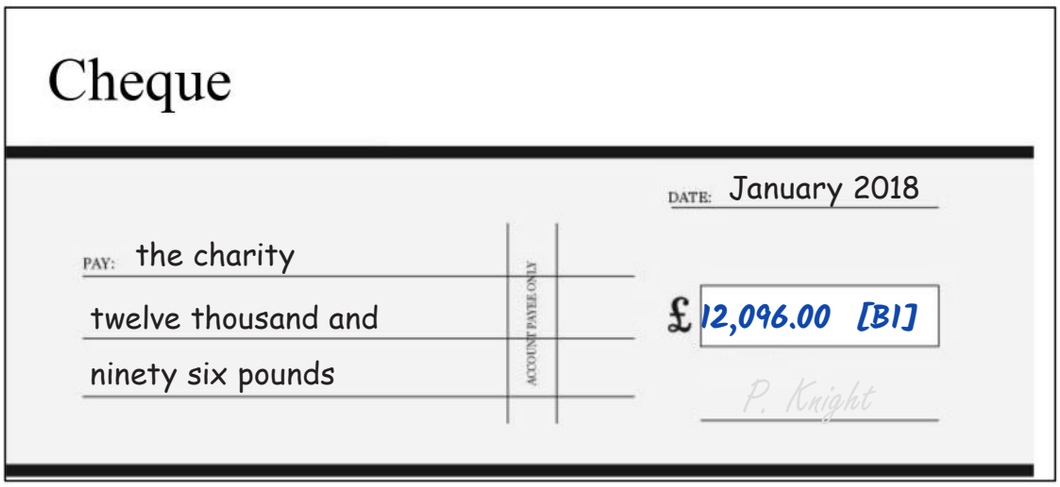

The total amount collected for the charity is

twelve thousand and ninety six pounds.

(b) Write twelve thousand and ninety six pounds in figures on the cheque.

(1)

Write the figure next to the pound sign on the cheque below.

Place Value Breakdown & Cheque Writing Rules:

- "Twelve thousand" = 12,000
- "Ninety six" = 96 (0 hundreds, 9 tens, 6 units)
- **Total in figures: 12,000 + 96 = 12,096 (or 12096.00) [B1]**
- Common Error Alert: Writing 1296 (missing zero) or 120096 (too many zeros).

(Total for Question 3 is 4 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

SECTION B: Keeping rabbits

Answer all questions in this section.

Write your answers in the spaces provided.

4 Ben wants to keep rabbits in his garden.
The rabbits will live in a rabbit run and hutch.

Ben wants to have 2 rabbits.

He knows that each rabbit needs a floor space of 4500 cm^2

Ben has a hutch with a floor space of 9500 cm^2

(a) Is this floor space big enough for 2 rabbits?
Show why you think this. **(2)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total floor space needed for 2 rabbits:

- *1 rabbit needs 4,500 cm^2*
- **2 rabbits need 2 × 4,500 cm^2 = 9,000 cm^2 [M1]**

Step 2: Compare floor space needed with hutch floor space:

- *Hutch floor space available = 9,500 cm^2*
- **9,000 cm^2 needed < 9,500 cm^2 available (500 cm^2 extra room!).**
- *Alternative: 9,500 ÷ 2 = 4,750 cm^2 per rabbit (> 4,500 cm^2).*

Step 3: Conclusion:

Therefore, Yes, this floor space is big enough for 2 rabbits. [A1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Ben has a lawn in his garden.
The lawn is in the shape of a rectangle 6 m by 5 m.

(b) What is the area of the lawn?

(2)

Use the box below to show clearly how you get your answer.

Step 1: Formula for area of a rectangle:

- *Area = Length × Width*

Step 2: Calculate lawn area with given dimensions (6 m by 5 m):

- **Area = 6 m × 5 m = 30 m² [M1]**

Step 3: State final answer with correct units:

- **Area of lawn = 30 m² (square metres) [A1]**

(Total for Question 4 is 4 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

5 Ben wants to put the rabbit run and hutch on his lawn.

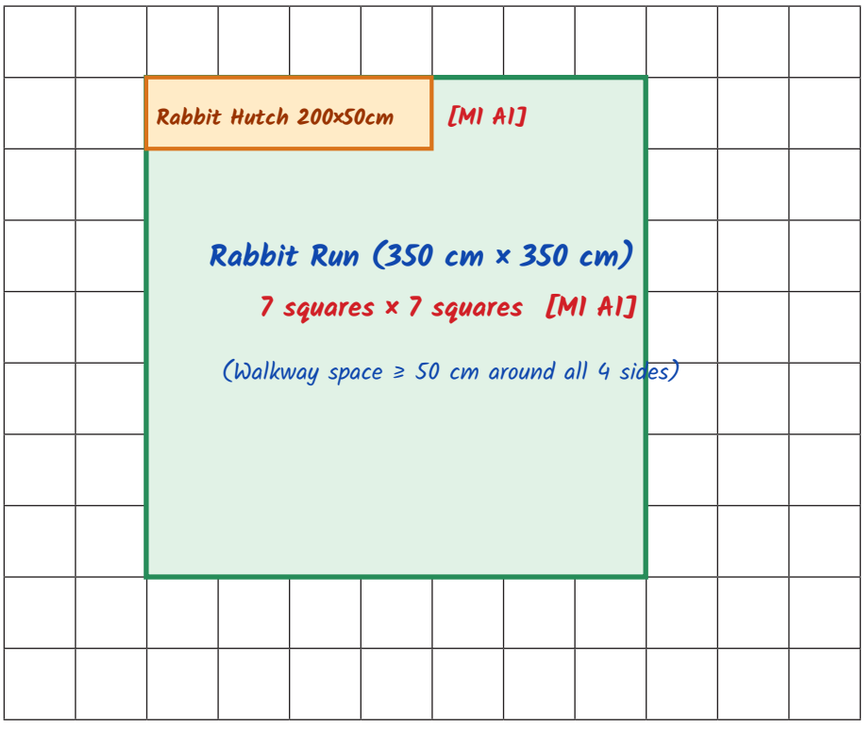

The space for the rabbit run must
- be square 350 cm by 350 cm
- have at least 50 cm space to walk around it.

The space for the rabbit hutch must be
- rectangular 200 cm by 50 cm.

The rabbit hutch will be in a corner inside the rabbit run.

The grid below is a plan of the lawn.

(a) Draw a space for the rabbit run and the rabbit hutch on the grid.
Remember to use the key. **(4)**

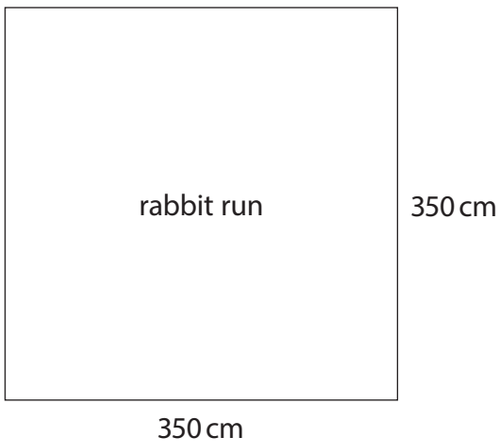

Key: 1 square on the grid is 50 cm by 50 cm on the lawn

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Ben needs to put wire fencing around the rabbit run.

Wire fencing is sold in rolls of length 6 m.
The fencing can be joined.

Ben has 3 rolls of wire fencing.

(b) Are 3 rolls of wire fencing enough to go around the rabbit run?

(4)

Use the box below to show clearly how you get your answer.

Step 1: Convert units consistently (centimetres to metres):

- **Side of rabbit run = 350 cm = 350 ÷ 100 = 3.5 m [B1]**

Step 2: Calculate perimeter of the square rabbit run (4 sides):

- **Perimeter = 4 × 3.5 m = 14 m of wire fencing needed [M1]**

  (In cm: 4 × 350 cm = 1,400 cm needed)

Step 3: Calculate total wire fencing available from 3 rolls:

- **1 roll = 6 m -> 3 rolls = 3 × 6 m = 18 m available [M1]**

  (In cm: 3 × 600 cm = 1,800 cm available)

Step 4: Compare fencing needed with fencing available:

- **14 m needed < 18 m available (he has 4 m of fencing left over!).**
- *Alternative: 14 ÷ 6 = 2.33 rolls needed < 3 rolls available.*

Therefore, Yes, 3 rolls of wire fencing are enough. [A1]

(Total for Question 5 is 8 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

6 Ben wants to compare different types of rabbit food.

He knows that

- 500 g of dried rabbit food contains 90 g of fibre
- 30% of the weight of hay is fibre.

Ben thinks that 500 g of hay has twice as much fibre as 500 g of dried rabbit food.

Is Ben correct?
Show why you think this.
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate fibre content in 500 g of hay (30% of 500 g):

- 10% of 500 g = 500 ÷ 10 = 50 g
- **30% of 500 g = 3 × 50 g = 150 g of fibre in hay [M1]**

  Alternative: 0.30 × 500 = 150 g (or 30/100 × 500 = 150 g)

Step 2: Calculate twice the fibre in 500 g of dried rabbit food:

- Dried food fibre = 90 g
- **Twice dried food fibre = 2 × 90 g = 180 g of fibre [M1]**

Step 3: Compare hay fibre with twice dried food fibre:

- **150 g in hay ≠ 180 g (hay has 30 g less fibre than twice dried food).**
- Alternative: 150 ÷ 2 = 75 g of fibre (not 90 g).

Therefore, No, Ben is NOT correct. [A1]

Key Takeaway for Exam:

- Always compare like-for-like values (150 g vs 180 g, or 75 g vs 90 g).

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Alternative Percentage Comparison Method:

- Fibre percentage in dried food = (90 ÷ 500) × 100 = 18%
- Twice dried food percentage = 2 × 18% = 36%
- Hay fibre percentage = 30% (30% ≠ 36%, hay is 6% less).

Conclusion confirmed: Ben is not correct. [A1]

Use the box below to show your check.

☑

Reverse Calculation Check:

- Reverse division: 150 g ÷ 0.30 = 500 g of hay [B1]
- Reverse dried food check: 180 g ÷ 2 = 90 g fibre (matches dried food)

(Total for Question 6 is 4 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

SECTION C: Eye care centre

Answer all questions in this section.

Write your answers in the spaces provided.

7 Carrie works at an eye care centre.

Amal has an eye test at the eye care centre.

The table below shows some information about the results of her eye test in 2017 and in 2015.

	Lens strength needed	
Date of test	**left lens**	**right lens**
2017	1.25	2.25
2015	1.5	2.75

NB all figures are positive.

Amal wants to know which lens strength has changed the most.

(a) Which lens strength has changed the most?

(3)

Use the box below to show clearly how you get your answer.

Step 1: Calculate change in Left Lens strength (2015 to 2017):

- *2015 = 1.50, 2017 = 1.25*
- *Change = 1.50 − 1.25 = 0.25 [M1]*

Step 2: Calculate change in Right Lens strength (2015 to 2017):

- *2015 = 2.75, 2017 = 2.25*
- *Change = 2.75 − 2.25 = 0.50 [M1]*

Step 3: Compare the two changes to find which changed the most:

- *0.50 (Right lens) > 0.25 (Left lens).*

Therefore, the Right lens has changed the most. [A1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

After her eye test, Amal needs to pay

- £25 for her eye test
- £155 for the frames
- £39.50 for the lenses
- insurance for her frames and lenses.

The table below shows the cost of insurance.

Total cost of frames and lenses	Cost of insurance
Below £101	£9
£101 – £200	£19
£201 – £300	£29
Over £300	£39

(b) How much does Amal have to pay in total?

(4)

Use the box below to show clearly how you get your answer.

Step 1: Calculate combined cost of frames and lenses:

- *Frames (£155) + Lenses (£39.50) = £194.50 [M1]*

  Working: 155.00 + 39.50 = £194.50

Step 2: Determine insurance cost from the pricing table:

- *£194.50 falls into the "£101 – £200" bracket*
- *Table entry for insurance = £19.00 [M1]*

Step 3: Calculate total amount Amal has to pay (all 4 items):

- *Eye test = £25.00*
- *Frames + Lenses = £194.50*
- *Insurance = £19.00*
- *Total = £25.00 + £194.50 + £19.00 = £238.50 [M1]*

Step 4: State final bill with correct money notation (£ and 2 d.p.):

- *Amal has to pay £238.50 in total. [A1]*

(Total for Question 7 is 7 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

8 George has an eye test.
These are part of his results.

Contact lens strength needed	
Left lens	**Right lens**
– 3.00	– 4.00

George wants to know which number is smaller – 3.00 or – 4.00

(a) Which is the smaller number – 3.00 or – 4.00?

(1)

Write your answer in the box below.

Understanding Negative Numbers on a Number Line:

- *On a number line, values decrease as you move further left from zero.*
- *– 4.00 is further to the left than – 3.00, so – 4.00 is smaller (– 4.00 < – 3.00).*

Answer:

- *The smaller number is – 4.00 (Right lens). [A1]*

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

George has these two options for contact lenses.

Option A	Option B
£108 for 90 pairs	£1.15 each pair

George wants to buy 90 pairs of contact lenses.
He wants to pay as little as possible.

(b) Which option should George use?
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total cost for 90 pairs with Option B:

- Option B unit price = £1.15 per pair
- **Cost for 90 pairs = 90 × £1.15 = £103.50 [M1]**

Working: 90 × £1 = £90; 90 × 10p = £9; 90 × 5p = £4.50 -> £103.50

Step 2: Compare Option B cost with Option A cost (£108.00):

- Option A cost = £108.00 (Unit cost = £108 ÷ 90 = £1.20 per pair)
- **Option B (£103.50) < Option A (£108.00) -> Saving = £4.50**

Step 3: State final recommendation:

Therefore, George should use Option B (saves £4.50). [A1]

Use the box below to show your check.

☑

Reverse Calculation / Unit Rate Check:

- **Reverse division: £103.50 ÷ 90 = £1.15 per pair [B1]**
- Unit cost check: Option A is £1.20/pair vs Option B at £1.15/pair (5p cheaper/pair)

(Total for Question 8 is 4 marks)

9 Carrie wants to record information about the type of eyewear people like.

She needs a data collection sheet to show

- their age (under 20, 20 to 60, over 60)
- which type of eyewear people like (glasses only, contact lenses only or both).

(a) Design a data collection sheet for Carrie.

(3)

Use the box below for your data collection sheet.

Two-Way Data Collection & Tally Sheet Design:

Criteria included: 3 non-overlapping age groups & 3 eyewear options [M1]

Age Group	Glasses Only	Contact Lenses	Both (G & C)	Total
Under 20 (< 20)	//// (4)	/// (3)	/ (1)	8
20 to 60	//// // (7)	//// / (6)	/// (3)	16
Over 60 (> 60)	//// //// (9)	/ (1)	// (2)	12
Total	20	10	6	36

Key Features of an Efficient Data Collection Sheet: [A1 B1]

- *Clear, descriptive table title and column/row headings*
- *Mutually exclusive, exhaustive age categories (<20, 20-60, >60)*
- *Specific eyewear options (glasses only, contacts only, both)*
- *Distinct spaces for recording tally marks and calculating totals*

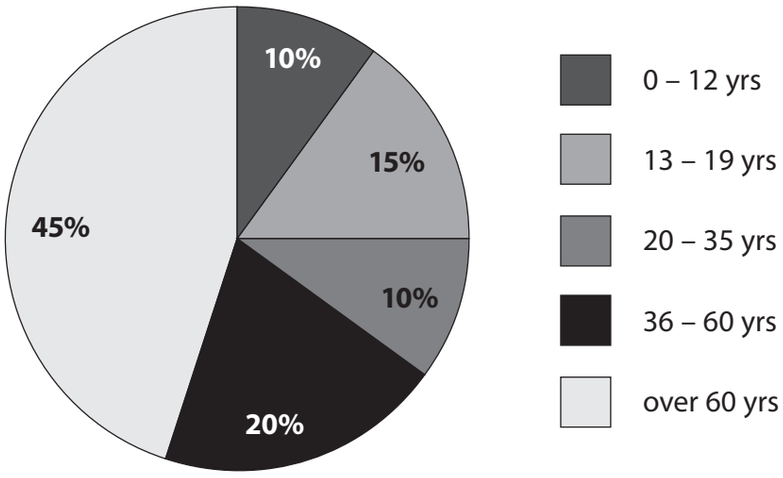

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Carrie has this information about the age of people who used the eye care centre.

Age of people

Carrie says

> The pie chart shows that a quarter of the people using the eye care centre were 36 to 60 years old.

(b) Is Carrie correct?
Show why you think this. **(2)**

Use the box below to explain your answer.

Step 1: Read the percentage for 36 to 60 years old from the pie chart:

- *From pie chart: 36 – 60 years old sector = 20% [M1]*

Step 2: Convert "a quarter" into a percentage:

- *A quarter = 1/4 = 25% (or 0.25) [M1]*

Step 3: Compare and state final decision:

- *20% < 25% (20% is actually one-fifth, not a quarter).*

Therefore, No, Carrie is NOT correct. [A1]

(Total for Question 9 is 5 marks)
