Past Paper 4

Time: 25 minutes | Paper Reference **PMAT1/N04**

Mathematics

Level 1
Section A (Non-Calculator)

You must have:
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses. Tracing paper may be used.

Total Marks: 14 /14

My signature confirms that I will not discuss the content of the test with anyone.

Signature: Master Functional Skills (MFS)

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and answers at each stage.
- Diagram are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used**.
- Take the value of π to be 3.14

Information

- The total mark for this section is 14.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

MasterFunctionalSkills.co.uk

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

1 Su has a new job.

She wants to compare the cost of travelling to work by train with the cost of travelling to work by car.

	daily cost	weekly cost
train	£11.50	
car		£65

Su travels to work 5 days each week.

She knows that it will be more expensive to travel to work by car.

How much more expensive is travelling to work by car each week?

(3)

Step 1: Calculate the total weekly cost of travelling by train (5 days):

Train weekly cost = 5 × £11.50 = £57.50 [M1]

- 5 × £11.00 = £55.00
- 5 × £0.50 = £2.50
- £55.00 + £2.50 = £57.50

Step 2: Find how much more expensive the car is (£65 vs £57.50):

Difference = £65.00 − £57.50 = £7.50 [M1]

- £65.00 − £57.00 = £8.00
- £8.00 − £0.50 = £7.50

Alternative method per day:

- Car daily cost = £65 ÷ 5 = £13.00
- Daily difference = £13.00 − £11.50 = £1.50 -> Weekly = 5 × £1.50 = £7.50

£ 7.50 [A1]

(Total for Question 1 is 3 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

2 Use a common fraction to work out an estimate for 73% of 120
You **must** show your working.

(3)

Step 1: Choose a common fraction close to 73%:

73% ≈ 75% = 3/4 (three quarters) [M1]

(Or: 73% ≈ 70% = 7/10)

Step 2: Calculate 3/4 of 120 using non-calculator steps:

Estimate = (120 ÷ 4) × 3 [M1]

- 1/4 of 120 = 120 ÷ 4 = 30
- 3/4 of 120 = 30 × 3 = 90

Alternative check using 7/10 (70%):

- 1/10 of 120 = 12, so 7/10 of 120 = 12 × 7 = 84
- Both 90 and 84 are fully accepted in the mark scheme.

90 [A1]

(Total for Question 2 is 3 marks)

DO NOT WRITE IN THIS AREA

3 Evie needs to make 200 scones.

Her recipe uses 150 ml of milk to make 10 scones.

How many litres of milk does Evie need for 200 scones?

(4)

Step 1: Work out the scaling factor for 200 scones:

Scale factor = 200 scones ÷ 10 scones = 20 batches [M1]

Step 2: Calculate total milk needed in millilitres (ml):

Total milk = 20 × 150 ml = 3000 ml [M1]

- 2 × 150 = 300 ml -> 20 × 150 = 3000 ml

Step 3: Convert millilitres to litres (1000 ml = 1 litre):

Litres of milk = 3000 ml ÷ 1000 = 3 litres [M1]

Alternative unitary method:

- Milk per scone = 150 ml ÷ 10 = 15 ml
- 200 scones = 200 × 15 ml = 3000 ml = 3 litres

3 [A1] litres

4 Fred makes solid pyramids.

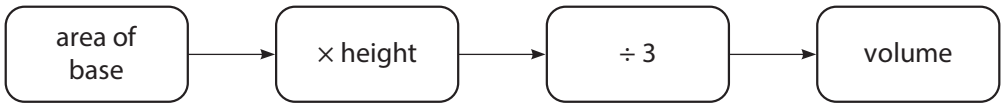

The height of each pyramid is 9 cm.

The base of each pyramid is in the shape of a square with side length 6 cm.

Fred needs to know the volume of one pyramid.

He uses this formula to work out the volume of one pyramid.

Fred thinks that the volume of one pyramid is more than 100 cm^3

Is Fred correct?
Show why you think this.

(4)

Step 1: Calculate the area of the square base:

Base area = side × side = 6 cm × 6 cm = 36 cm^2 [M1]

Step 2: Apply the volume formula:

Volume = (Base area × height) ÷ 3 [M1]

Volume = (36 × 9) ÷ 3 = 108 cm^3 [M1]

· 36 × (9 ÷ 3) = 36 × 3 = 108 cm^3 (or 324 ÷ 3 = 108 cm^3)

Step 3: Compare with Fred's claim (volume > 100 cm^3):

108 cm^3 is greater than 100 cm^3, so Fred is correct!

Yes (108 cm^3) [A1]

(Total for Question 4 is 4 marks)

TOTAL FOR SECTION A IS 14 MARKS

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

1 Mia has a job interview at 9:20 am.

When Mia wakes up she will need

- $1\frac{3}{4}$ hours to get ready
- 25 minutes to walk to the interview.

What is the latest time Mia needs to wake up?

(3)

Step 1: Convert 1 3/4 hours into hours and minutes:

3/4 hour = 3/4 × 60 = 45 minutes

1 3/4 hours = 1 hour 45 minutes = 105 minutes [M1]

Step 2: Find total time required before the 9:20 am interview:

Total time = 1 hr 45 mins + 25 mins = 2 hours 10 mins [M1]

- 45 mins + 25 mins = 70 mins = 1 hr 10 mins
- 1 hr + 1 hr 10 mins = 2 hours 10 minutes (or 130 mins)

Step 3: Count back 2 hours 10 minutes from 9:20 am:

- 9:20 am − 2 hours = 7:20 am
- 7:20 am − 10 mins = 7:10 am

Conclusion: Mia needs to wake up at 7:10 am at the latest.

7:10 [A1] am

(Total for Question 1 is 3 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

2 Jonathan is writing a report about recycling in the local town.

In 2019

- there were 2170 people living in the town
- each person in the town recycled an average of 395.4 kg of waste.

Jonathan knows that 1 tonne = 1000 kg.

(a) How many tonnes of waste were recycled in the town in total in 2019?
Give your answer correct to 2 decimal places.

(3)

Step 1: Calculate total kilograms of waste recycled:

Total kg = 2170 × 395.4 kg = 858 018 kg [M1]

Step 2: Convert kilograms to tonnes (1 tonne = 1000 kg):

Tonnes = 858 018 ÷ 1000 = 858.018 tonnes [M1]

Step 3: Round correct to 2 decimal places:

858.018 ≈ 858.02 tonnes (8 in 3rd decimal rounds up)

858.02 [A1] tonnes

☑ (b) Use estimation to show a check of your answer.

(1)

Check using estimation (round to 1 significant figure):

- 2170 ≈ 2000 people and 395.4 kg ≈ 400 kg
- Estimated tonnes = (2000 × 400) ÷ 1000 = 800 tonnes ✓

800 tonnes is close to 858.02, confirming the answer is sensible.

(Total for Question 2 is 4 marks)

3 Layla starts a business making and selling scarves.

The table shows information about the profit she makes in the first four months.

month	1	2	3	4
profit (£)	200	180	220	275

(a) Draw a graph for this information on the grid below.

(2)

Graph Construction Summary:

- Vertical axis: linear scale completed in 50s (£10 per square). [M1]
- Month 1: (£200 plotted 20 squares up at x = 1)
- Month 2: (£180 plotted 18 squares up at x = 2)
- Month 3: (£220 plotted 22 squares up at x = 3)
- Month 4: (£275 plotted at x = 4, halfway between 270 and 280)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Layla gives

- 120 scarves to Shop A to sell
- 152 scarves to Shop B to sell.

Shop A sold 15% of its 120 scarves.

Shop B sold an eighth of its 152 scarves.

(b) Which shop sells the most scarves?
You **must** show your working.

(3)

Step 1: Calculate scarves sold by Shop A (15% of 120):

Shop A sales = 0.15 × 120 = 18 scarves [M1]

- 10% of 120 = 12
- 5% of 120 = 6
- 15% = 12 + 6 = 18 scarves

Step 2: Calculate scarves sold by Shop B (1/8 of 152):

Shop B sales = 152 ÷ 8 = 19 scarves [M1]

- 152 ÷ 8: 8 into 15 goes 1 rem 7, 8 into 72 goes 9 -> 19

Step 3: Compare Shop A and Shop B sales:

19 (Shop B) > 18 (Shop A), difference = 1 scarf.

Conclusion: Shop B sells the most scarves (19 scarves).

Shop B (19 vs 18) [A1]

(Total for Question 3 is 5 marks)

4 On Monday Selma has £202.69 in her bank account.

Selma needs to pay a bill of £465.20 from the account on Wednesday.

She will pay some money into the account on Tuesday so that there is

- enough money in the account to pay the bill
- £10 left in the account after the bill has been paid.

No other payments occur.

How much money does Selma pay into the account on Tuesday?

(3)

Step 1: Calculate the total money needed in the account on Wednesday:

Target amount = Bill (£465.20) + Buffer (£10.00) [M1]

Target amount = £465.20 + £10.00 = £475.20

Step 2: Find how much money Selma must pay in on Tuesday:

Payment required = Target amount − Current balance [M1]

Payment = £475.20 − £202.69 = £272.51

Alternative method working backwards from bill deficit:

- *Shortfall for bill = £465.20 − £202.69 = £262.51*
- *Add required £10 buffer = £262.51 + £10.00 = £272.51*

£ *272.51* *[A1]*

5 Kelly is designing a pattern on a grid.

The pattern must

- cover all the grid
- use only black squares and white squares
- have exactly 2 lines of symmetry.

(a) Complete the pattern on the grid.

(2)

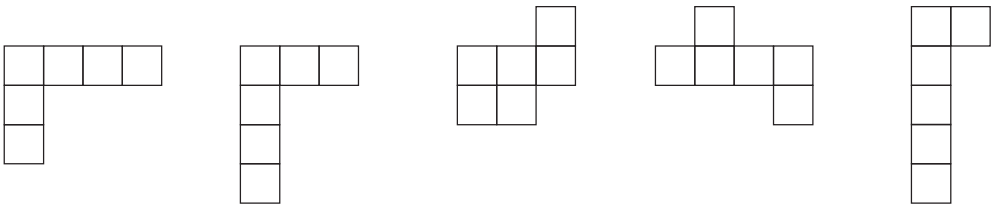

[M1][A1]

(b) Which **one** of these nets will make a cube?

Tick [✔] a net to show your answer.

(1)

A [ ] B [ ] C [ ] D [✓] [B1] E [ ]

Net Verification:

- *Net D is a standard valid "T-shape / cross" cube net (folds into 6 closed faces).*
- *Nets A, B, C, and E overlap faces or have incorrect base alignments.*

(Total for Question 5 is 3 marks)

6 Carl is running a charity race.

Here is a map for part of the route.

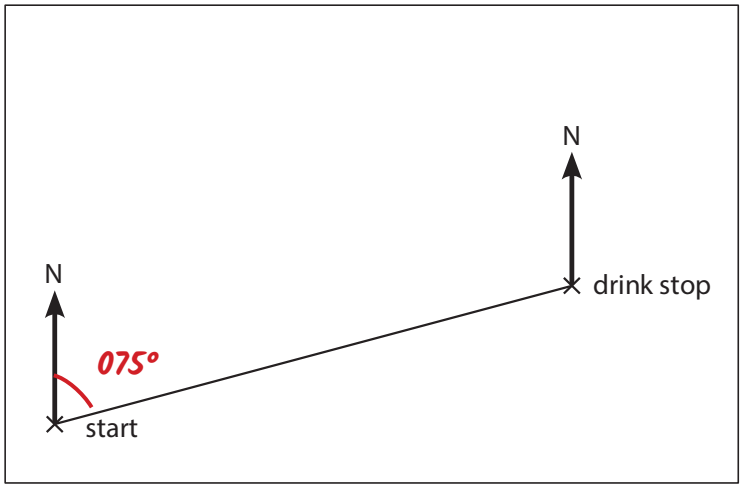

Diagram drawn accurately

Carl wants to know the bearing of the route.

(a) Find the bearing of the drink stop from the start.

(1)

Bearing Method & Golden Rules:

1. Measured clockwise from the North line at the Start point.

2. Using a protractor, the angle from North to the route line is 75°.

3. Three-figure bearing format: write with a leading zero as 075°.

075 [B1] °

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

Carl is running the race as part of a team.

The table shows the running times for all the team members.

team member	Brenda	Carl	Dillon	Ebony	Fred
running time (minutes)	47	42	53	40	38

(b) Work out the range of the running times.

(2)

Step 1: Identify highest and lowest running times from the table:

- Highest time = 53 minutes (Dillon)
- Lowest time = 38 minutes (Fred)

Range = Highest − Lowest = 53 − 38 = 15 minutes [M1]

15 [A1] minutes

The same team ran the race last year.

The mean running time for the runners in the team last year was 45 minutes.

Carl thinks that the mean running time for the runners in the team this year is less than 45 minutes.

(c) Is Carl correct?
Show why you think this.

(3)

Step 2: Total time = 47 + 42 + 53 + 40 + 38 = 220 minutes [M1]

Step 3: Mean running time = 220 ÷ 5 = 44 minutes [M1]

Step 4: 44 minutes is less than last year's 45 minutes (44 < 45).

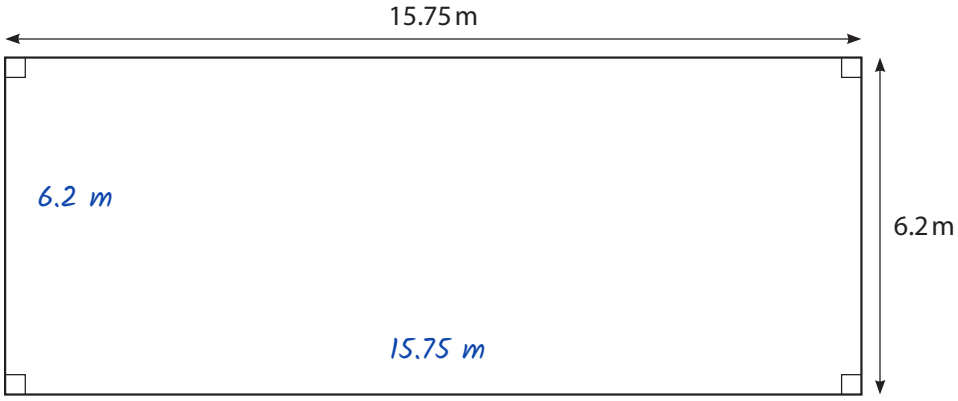

Conclusion: Carl is correct!

Yes (44 < 45 mins) [A1]

(Total for Question 6 is 6 marks)

7 Jasmine has an allotment.

The allotment is in the shape of a rectangle.

Jasmine wants to put a fence around the edge of the allotment.

There needs to be a gap in the fencing of 1.5 m for a gate.

Fencing is sold in whole metres.

Work out the length of fencing Jasmine needs to buy.

(3)

Step 1: Calculate total perimeter of the rectangular allotment:

Perimeter = 2 × (Length + Width) [M1]

Perimeter = 2 × (15.75 + 6.2) = 2 × 21.95 = 43.9 m

Step 2: Subtract the 1.5 m gap for the gate:

Fencing required = 43.9 m − 1.5 m = 42.4 m [M1]

Step 3: Round up to whole metres (fencing sold in whole metres):

42.4 m requires 43 whole metres to completely fence the garden.

(42 m would leave a 0.4 m gap; must buy 43 m)

43 [A1] m

(Total for Question 7 is 3 marks)

8 Samir is planning a new kitchen.

He has this diagram of one of the walls.

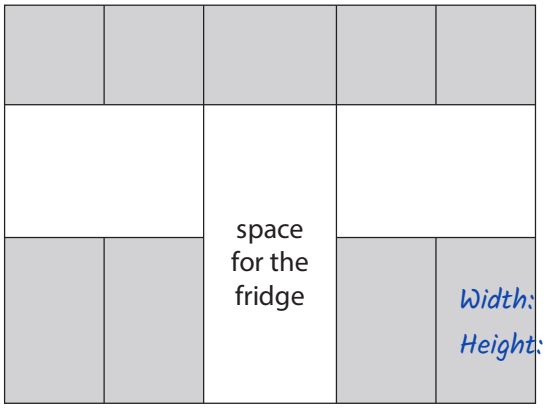

Diagram drawn accurately

Width: 2 cm -> 80 cm

Height: 4.5 cm -> 180 cm

Key 1 cm on the diagram represents 40 cm on the wall

kitchen cabinet

The diagram shows the space for a fridge.

Samir has these fridges to choose from.

fridge	A	B	C	D
width	54.5 cm	54.5 cm	69.5 cm	91 cm
height	182 cm	177.5 cm	178.8 cm	179.5 cm

Samir wants to buy the largest fridge possible to fit in this space.

Which fridge should Samir choose?
Show why you think this.

(3)

Step 1: Space for fridge on wall (scale 1 cm = 40 cm):
- Space width = 2 cm × 40 = 80 cm [M1]
- Space height = 4.5 cm × 40 = 180 cm [M1]

Step 2: Compare fridges (must fit within 80 cm wide × 180 cm high):
- A is too tall (182 > 180); D is too wide (91 > 80); B & C fit.
- Fridge C is the LARGEST (69.5 cm wide vs 54.5 cm for B).

Samir chooses Fridge C.

Fridge C [A1]

9 Rita wants to buy an oak shelf from a shop.

The normal price of the shelf is £170
The shop has this offer.

45% off the normal price

Rita will use this offer.
She has a budget of £100 to buy the shelf.

(a) Can Rita buy the shelf?

(3)

Step 1: Calculate the discount amount (45% off £170):

Discount = 0.45 × £170 = £76.50 [M1]

- 10% of £170 = £17.00 -> 40% = 4 × £17.00 = £68.00
- 5% of £170 = £8.50
- Total discount = £68.00 + £8.50 = £76.50

Step 2: Work out the sale price of the shelf:

Sale price = £170 − £76.50 = £93.50 [M1]

(Or: 100% − 45% = 55% -> 0.55 × £170 = £93.50)

Yes (£93.50) [A1]

☑ (b) Use a reverse method to show a check of your answer.

(1)

Reverse calculation check:

- **Add discount back to sale price: £93.50 + £76.50 = £170.00 [B1]**
- Or division: £93.50 ÷ 0.55 = £170.00 (original normal price)

Both reverse methods return exactly £170, fully verifying the result. ✓

10 Tom rolls an ordinary fair dice.

(a) Mark with a cross (X) on the scale the probability that Tom rolls an even number.

(1)

[B1]

Even numbers on 6-sided dice: {2, 4, 6} -> 3 out of 6 = 3/6 = 0.5 (halfway).

Tom has a fair dice with 12 faces of equal size.

There is one number on each face.

The numbers are 1 to 12

Tom rolls the dice and looks at the number on the top face.

(b) What is the probability that this number is more than 5?

(2)

Step 1: Identify numbers strictly greater than 5 on a 12-sided dice:

Numbers > 5: {6, 7, 8, 9, 10, 11, 12} -> 7 outcomes [M1]

Step 2: Write as a fraction of total possible outcomes (12):

Probability (number > 5) = 7 / 12

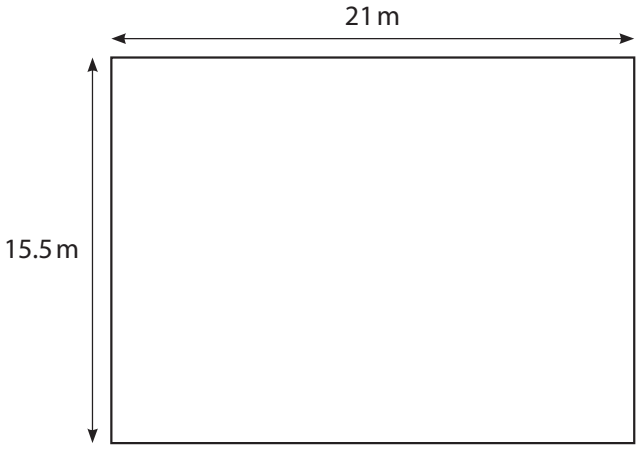

$$\frac{7}{12}$$ [A1]

11 Georgia is an office manager.

The office floor is in the shape of a rectangle.
The diagram shows the floor space of the office.

A total of 65 people work in the office.
Each person needs at least 4 m^2 of floor space to work in.

Georgia wants to increase the number of people working in the office by 20%.

She thinks that each person will still have at least 4 m^2 of floor space to work in.

Is Georgia correct?
Show why you think this.

(5)

Step 1: Calculate the total floor area of the rectangular office:

Area = Length × Width = 21 m × 15.5 m = 325.5 m^2 [M1]

Step 2: Calculate the new number of people after a 20% increase:

20% increase on 65 people = 0.20 × 65 = 13 additional people [M1]

New total staff = 65 + 13 = 78 people [M1]

Step 3: Work out total floor space required for 78 people:

Space needed = 78 people × 4 m^2 = 312 m^2 [M1]

(Full comparison and final answer continued on next page)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Step 4: Compare available floor area with required space:

- **Available area = 325.5 m²**
- **Space needed for 78 people = 312 m²**

325.5 m² > 312 m² (there is 13.5 m² surplus floor space).

Alternative method checking floor space per person:

- Space per person = 325.5 m² ÷ 78 people ≈ 4.17 m² per person
- 4.17 m² is greater than the required 4 m².

Alternative method checking maximum capacity:

- Maximum people allowed = 325.5 m² ÷ 4 m² = 81.375 people
- 81 people can comfortably fit, and 78 < 81.

Conclusion: Georgia is correct; each person will still have at least 4 m².

Yes (325.5 m²) [A1]
