MFS-UK	PRACL1/N02

Practice Set 2

Time: 25 minutes | Paper Reference **PRACL1/N02**

Mathematics

Level 1
Section A (Non – Calculator)

You must have:
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses. Tracing paper may be used.

Total Marks
14 /14

My signature confirms that I will not discuss the content of the test with anyone.

Signature: Master Functional Skills (MFS)

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and answers at each stage.
- Diagrams are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**
- Take the value of π to be 3.14

Information

- The total mark for this section is 14.
- The marks for **each** question are shown in brackets.
  – *use this as a guide as to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

1 Joe works for a charity.
Each year the charity gives money to different projects.

The charity has a total of eight thousand nine hundred and sixty-eight pounds to give to the projects this year.

Joe needs to share the total money equally between 8 projects.

Work out how much money each project will receive.

(3)

Step 1: Convert the word number into numerical digits:

Eight thousand nine hundred and sixty eight = £8 968 [B1]

Step 2: Share equally between 8 projects (divide by 8):

8 968 ÷ 8 [M1]

- 8 ÷ 8 = 1 (thousands)
- 9 ÷ 8 = 1 remainder 1 (hundreds)
- 16 ÷ 8 = 2 (tens)
- 8 ÷ 8 = 1 (units)

= £1 121 per project [A1]

£ 1 121 [A1]

(Total for Question 1 is 3 marks)

2 Alex is going to cook a chicken.

He uses this rule to work out the total time needed to cook the chicken.

The weight of the chicken is 3 kg.

Use the rule to find the total time needed to cook the chicken.
Give your answer in minutes.

(3)

Follow the two-step formula rule:

Step 1: Multiply the weight (3 kg) by 45:

3 × 45 = 135 minutes [M1]

Step 2: Add 20 minutes to get the total cooking time:

135 + 20 = 155 minutes [M1]

Total cooking time = 155 minutes [A1]

(Check: 155 − 20 = 135; 135 ÷ 3 = 45 kg rate)

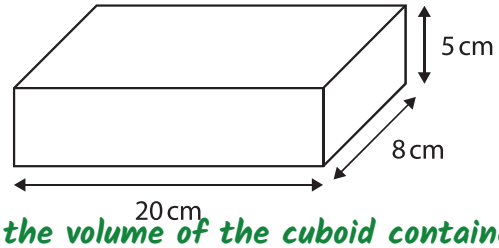

155 minutes [A1]

(Total for Question 2 is 3 marks)

3 Kiara needs a container to put in her freezer.

She sees this container.
The container is in the shape of a cuboid.

Kiara knows 1000 cm^3 = 1 litre.
She thinks the container holds more than $\frac{3}{4}$ litre.

Is Kiara correct?
You **must** show your working.

(4)

Step 1: Calculate the volume of the cuboid container:

Volume = Length × Width × Height

= 20 cm × 5 cm × 8 cm = 800 cm^3 [M1]

Step 2: Convert 3/4 litre into cubic centimetres (cm^3):

3/4 litre = 3 ÷ 4 = 0.75 litres [M1]

Since 1 000 cm^3 = 1 litre:

0.75 × 1 000 = 750 cm^3 [M1]

(Alternatively: 800 cm^3 ÷ 1 000 = 0.8 litres)

Step 3: Compare and conclude:

800 cm^3 > 750 cm^3 (or 0.8 litres > 0.75 litres)

The container holds 800 cm^3, which is more than 3/4 litre (750 cm^3).

Therefore, Kiara is correct. [A1]

Yes [A1]

(Total for Question 3 is 4 marks)

4 Zane needs to travel from Sheffield to London on Saturday.

The table shows the cost for the different types of transport.

type of transport	cost (£)
train first class	47.25
train standard class	34.00
bus	6.30
car	26.52

(a) Calculate the range of these costs.

Highest cost (Train 1st class) = £47.25

Lowest cost (Bus) = £6.30

Range = Highest − Lowest = £47.25 − £6.30 [M1]

= £40.95 [A1]

(2)

£ 40.95 [A1]

Zane buys a standard class train ticket.
He uses a 15% discount voucher.

(b) How much money does he save with this voucher?

Standard ticket price = £34.00

Discount = 15% of £34.00

Method: (15 ÷ 100) × £34 = 0.15 × 34 [M1]

= £5.10 [A1]

(10% of 34 = 3.40; 5% = 1.70; 3.40 + 1.70 = £5.10)

(2)

£ 5.10 [A1]

(Total for Question 4 is 4 marks)

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

1 Jasper decorates flower pots to sell in his shop.
He knows that it takes 12 minutes to decorate a flower pot.

Jasper works from 9.30 am until 12.50 pm on Tuesday.
He takes 20 minutes for a coffee break at 10.30 am.

How many flower pots does Jasper decorate on Tuesday?

(3)

Step 1: Calculate total time elapsed between 9.30 am and 12.50 pm:

9.30 am to 12.30 pm = 3 hours = 180 minutes

12.30 pm to 12.50 pm = 20 minutes

Total elapsed time = 3 hours 20 minutes = 200 minutes [M1]

Step 2: Subtract the 20-minute coffee break to find working time:

Working time = 200 mins − 20 min break = 180 mins (3 hrs)

Step 3: Calculate how many 12-minute flower pots he can decorate:

Number of pots = 180 minutes ÷ 12 minutes per pot [M1]

= 15 flower pots [A1]

Check: 15 pots × 12 mins = 180 mins

180 mins + 20 min break = 200 mins (9.30 am to 12.50 pm)

15 [A1]

2 Cruz is the editor of a magazine.

The magazine has 40 pages.

The magazine must have

- 20% of the pages for adverts
- $\frac{1}{4}$ of the pages for photos
- the remaining pages for articles.

Work out the number of pages for articles in the magazine.

(4)

Total pages in magazine = 40 pages

Step 1: Calculate pages for adverts (20% of 40):

20% of 40 = 0.20 × 40 = 8 pages [M1]

Step 2: Calculate pages for photos (1/4 of 40):

1/4 of 40 = 40 ÷ 4 = 10 pages [M1]

Step 3: Calculate total pages used for adverts and photos:

8 + 10 = 18 pages

Step 4: Subtract from total to find pages for articles:

Pages for articles = 40 − 18 = 22 pages [M1]

= 22 pages [A1]

Check: 8 (adverts) + 10 (photos) + 22 (articles) = 40 pages total

22 pages

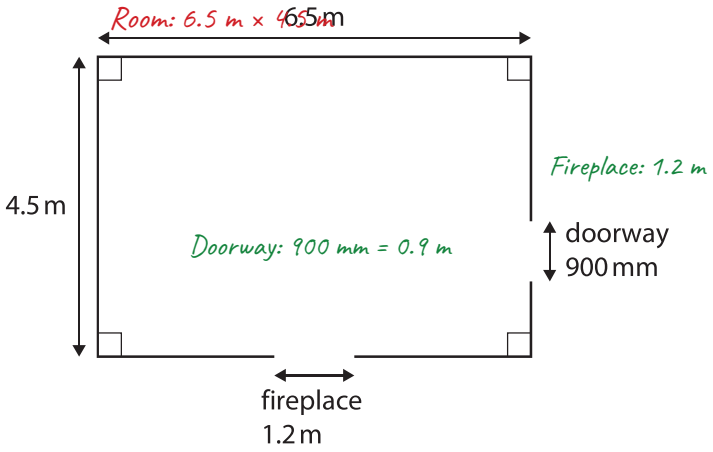

(Total for Question 2 is 4 marks)

3 Amy wants new skirting boards in her living room.

The skirting boards will

- go along the bottom of each wall
- not go across the doorway
- not go across the fireplace.

Amy has this sketch of her living room.

Skirting boards come in lengths of 2.4 m
The lengths of skirting board can be cut and joined.

How many lengths of skirting board does Amy need?
You **must** show your working.

(5)

Step 1: Calculate total perimeter of the living room (4 walls):

Perimeter = 6.5 + 4.5 + 6.5 + 4.5 = 22.0 m [M1]

Step 2: Convert doorway measurement to metres:

Doorway = 900 mm ÷ 1 000 = 0.9 m [M1]

Step 3: Subtract openings (doorway and fireplace) from perimeter:

Skirting needed = 22.0 m − (0.9 + 1.2) m = 19.9 m [M1]

Step 4: Calculate number of 2.4 m lengths required:

Lengths = 19.9 m ÷ 2.4 m = 8.29... lengths [M1]

Boards sold in whole lengths: round UP to 9 lengths! [A1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Summary of skirting board calculations:

- *Total wall perimeter = 22.0 m*
- *Openings (doorway 0.9 m + fireplace 1.2 m) = 2.1 m*
- *Net length needed = 22.0 – 2.1 = 19.9 m*
- *19.9 ÷ 2.4 = 8.29... --> Must round UP to 9 full lengths*

(8 lengths = 8 × 2.4 = 19.2 m, which is 0.7 m too short!)

9 *[A1]*

(Total for Question 3 is 5 marks)

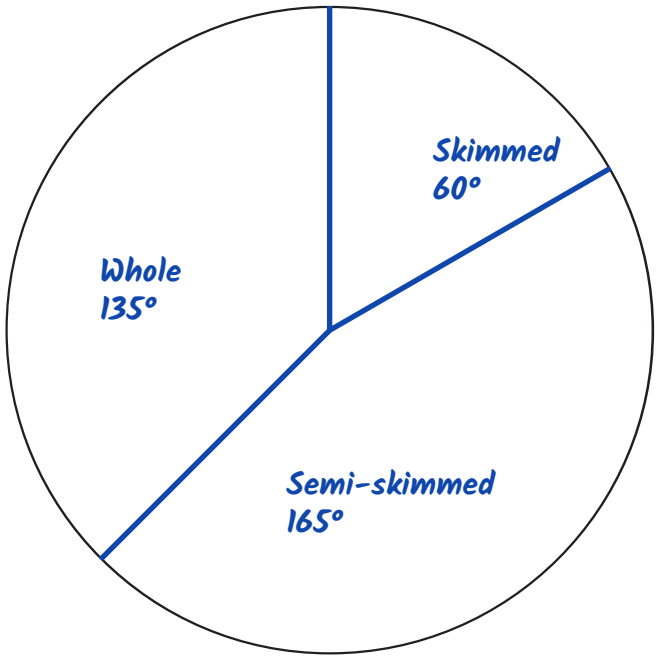

4 John is a milkman.

The table shows information about the types of milk John delivers each day.

type of milk	number	angle
skimmed	20	60°
semi skimmed	55	165°
whole	45	135°

Draw a pie chart to show this information
Remember to label the chart.

(3)

Pie Chart Angles: Skimmed 60° [M1] · Whole 135° [M1] · Semi-skimmed 165° [A1]

Total angles = 60° + 165° + 135° = 360° (full circle accurately drawn & labelled)

8 Penny is the manager of a nursery for pre-school children.

She knows that the ratio of the number of adults to the number of children must be 1 : 8

Penny has 56 children at the nursery.

(a) Work out the number of adults Penny needs for 56 children.

(2)

Ratio of adults to children = 1 : 8

This means 1 adult is required for every 8 children.

Number of adults needed = Total children ÷ 8

= 56 ÷ 8 = 7 adults [M1]

7 [A1]

☑ (b) Use a reverse calculation to show a check of your answer.

(1)

Reverse Multiplication Check:

7 adults × 8 children per adult = 56 children ✓ Matches! [B1]

9 Scott is a journalist.
He is writing an article about fish and chip shops in his town.

The table shows the prices of a standard portion of fish and chips in 5 local shops.

shop	A	B	C	D	E
cost (£)	7.60	6.25	5.85	6.65	8.00

Scott thinks the mean price of a standard portion of fish and chips in these 5 shops is £6.85

Step 1: Calculate total cost of portions in all 5 shops:

(a) Is Scott correct?
Show why you think this.

(3)

Total = £7.60 + £6.25 + £5.85 + £6.65 + £8.00
= £34.35 [M1]

Step 2: Calculate the mean price (divide by 5):

Mean = £34.35 ÷ 5 = £6.87 [M1]

Step 3: Compare with Scott's claim (£6.85):

Since £6.87 > £6.85, Scott is NOT correct. [A1]

No [A1]

☑ (b) Use estimation to show a check of your answer.

(1)

Estimation Check (round each price to nearest pound):

8 + 6 + 6 + 7 + 8 = £35

Estimated Mean = £35 ÷ 5 = £7.00 (close to £6.87) [B1]

7 [B1]

(Total for Question 9 is 4 marks)

10 Matteo works for the local council.
The council has 1260 grit bins.

The council will increase the number of grit bins by 5%
Matteo thinks there will be more than 1300 grit bins after the increase.

Is Matteo correct?
You **must** show your working.

(3)

Method 1: Find 5% increase and add to current count

Current grit bins = 1 260

5% of 1 260 = 1 260 × 0.05 = 63 additional bins [M1]

Total after increase = 1 260 + 63 = 1 323 bins [M1]

Method 2 (Multiplier):

1 260 × 1.05 = 1 323 bins

Evaluation & Decision:

Matteo thinks there will be more than 1 300 grit bins.

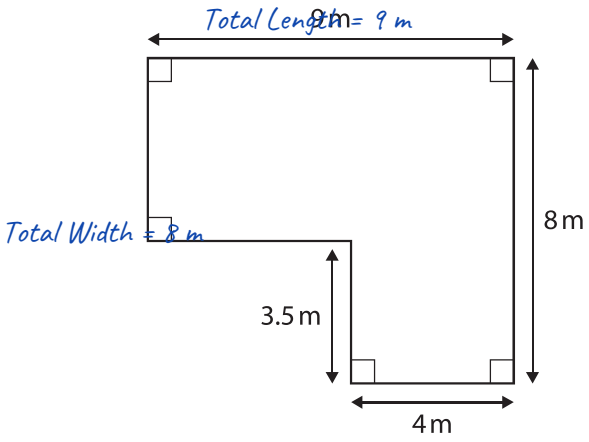

Since 1 323 > 1 300 (by 23 bins), Matteo is correct! [A1]

Yes [A1]

(Total for Question 10 is 3 marks)

11 Lanza is a gardener.
She has this plan of a garden.

Lanza needs to put grass turf to cover this garden.
She charges £16 a square metre to put grass turf in a garden.

Lanza thinks she will need to charge more than £800 to put grass turf in this garden.

Is she correct?
Show why you think this.

(5)

Step 1: Find missing dimensions of the compound L-shape:

- Missing horizontal side = 9 m − 4 m = 5 m [M1]
- Missing vertical side = 8 m − 3.5 m = 4.5 m [M1]

Step 2: Split garden into two rectangles to find total area:

- Area A = 9 m × 4.5 m = 40.5 m²
- Area B = 4 m × 3.5 m = 14.0 m²

Total Area = 40.5 + 14.0 = 54.5 m² [M1]

(Or subtract cut-out: (9 × 8) − (5 × 3.5) = 72 − 17.5 = 54.5 m²)

Step 3: Calculate total cost at £16 per square metre:

Total cost = 54.5 m² × £16 = £872 [M1]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Step 4: Compare with Lanza's estimate (£800):

Lanza thinks she will need to charge more than £800.

Since £872 > £800 (by £72), Lanza is correct. [A1]

Alternative check: £800 ÷ £16 = 50 m^2. Since garden is 54.5 m^2 > 50 m^2, cost > £800.

Yes [A1]
