Master Functional Skills	Model Solutions (MFS)

Pearson Edexcel Functional Skills

Centre Number	Candidate Number
MFS-UK	L2-JUN18

Mathematics

Level 2

11 – 15 June 2018
Time: 1 hour 30 minutes

Paper Reference
FSM02/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

SECTION A: Advertising

Answer all questions in this section.

Write your answers in the spaces provided.

1 Laypin monitors social media for a company.

She begins to draw a scatter graph for the number of posts and the number of likes for the company in the last seven weeks of 2017

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

The table shows some rounded information for the first five weeks of 2018

number of posts	18	43	32	25	27
number of likes	2300	6300	3100	5100	4400

Laypin wants to add this information to the scatter graph.

(a) Complete the scatter graph for Laypin.
Use the grid on the page opposite. **(3)**

Laypin needs to write a comment about any correlation shown by the scatter graph.

(b) Write a comment for Laypin. **(1)**

Use the box below to write your comment.

Comment on Correlation: *[A1 comment]*

There is a positive correlation between the number of posts and likes.

As the number of posts increases, the number of likes also increases.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

The table below shows the exact number of likes received in the first 5 weeks of 2018

week	1	2	3	4	5
number of likes	2341	6310	3129	5128	4357

Laypin thinks the mean weekly number of likes in these 5 weeks is more than 4000

(c) Is the mean weekly number of likes in these 5 weeks more than 4000?
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total number of likes across the 5 weeks *[M1 sum]*

Total Likes = 2,341 + 6,310 + 3,129 + 5,128 + 4,357

Total Likes = 21,265 likes

Step 2: Calculate mean weekly number of likes (sum ÷ 5 weeks) *[M1 mean]*

Mean = 21,265 ÷ 5 = 4,253 likes per week

Step 3: Compare calculated mean with Laypin's claim (> 4,000)

4,253 > 4,000 (exceeds 4,000 by 253 likes)

[A1 decision]

Conclusion: Yes, Laypin is correct (mean is 4,253 > 4,000).

Write your check in the box below.

☑

Reverse multiplication check: *[B1 check]*

4,253 × 5 = 21,265 likes (matches total sum of 5 weeks)

Alternative: 5 × 4,000 = 20,000 < 21,265 (confirms mean > 4,000) (correct)

(Total for Question 1 is 7 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

2 Laypin has this information about the number of sales the company made last month.

	Type of customer	
Type of product	first time	returning
new	1634	5618
existing	435	2394
clearance	731	3012

(a) What percentage of the products sold last month to first time customers were new products?
Give your answer correct to 1 decimal place. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Total products sold last month to first-time customers *[M1 total]*

Total First-Time Sales = 1,634 (new) + 435 (existing) + 731 (clearance)

Total First-Time Sales = 2,800 products

Step 2: Calculate percentage of first-time sales that were new products *[M1 percent]*

Fraction = 1,634 ÷ 2,800 = 0.5835714...

Percentage = (1,634 ÷ 2,800) × 100 = 58.35714...%

Step 3: Round percentage correct to 1 decimal place

58.357...% rounds to 58.4% (to 1 d.p.)

Percentage of new products = 58.4% *[A1 answer]*

Verification check:

0.584 × 2,800 = 1,635.2 ≈ 1,634 products (matches accurately)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

The company stocks 240 different products.

It stocks the products in the ratio

new : existing : clearance

3 : 2 : 1

Laypin thinks it stocks 117 new products.

(b) Is Laypin correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Find total number of ratio parts *[M1 ratio]*

Ratio new : existing : clearance = 3 : 2 : 1

Total Parts = 3 + 2 + 1 = 6 parts

Step 2: Calculate the number of products per 1 part

1 part = 240 products ÷ 6 = 40 products

Step 3: Calculate the number of new products in stock (3 parts) *[M1 new]*

New Products = 3 × 40 = 120 products

(Full breakdown: New = 120, Existing = 80, Clearance = 40; 120+80+40 = 240)

Step 4: Compare with Laypin's claim (117 new products)

120 ≠ 117 (actual stock is 120, which is 3 more than 117)

[A1 decision]

Conclusion: No, Laypin is NOT correct (it stocks 120, not 117).

(Total for Question 2 is 6 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 The company also advertises its products in France.

One French website charges €195 per advert.
The company buys 5 of these adverts.

The exchange rate is £1 = 1.1025 euros.

What would be the total cost of the 5 adverts in pounds?

(3)

Use the box below to show clearly how you get your answer.

Step 1: Calculate total cost of 5 adverts in euros (€) *[M1 euros]*

Total Euros (€) = 5 adverts × €195 per advert

Total Euros = €975

Step 2: Convert total euros to pounds (£) using exchange rate *[M1 convert]*

Exchange rate: £1 = 1.1025 euros (divide euros by 1.1025 to get £)

Cost in Pounds (£) = €975 ÷ 1.1025

= 884.3537415... ≈ £884.35

Final Answer with correct money notation:

Total cost of 5 adverts = £884.35 *[A1 answer]*

Alternative check (cost per advert in £):

€195 ÷ 1.1025 = £176.8707... per advert

5 × £176.8707... = £884.35 (matches total accurately)

(Total for Question 3 is 3 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

SECTION B: Safari Park

Answer all questions in this section.

Write your answers in the spaces provided.

4 The Lawson family want to go to the safari park.
They see this online offer.

Safari Park

Admission Prices

	peak	off peak
adults	£17.80	£14.50
children (aged 3 and over)	£12.50	£10.25
children (under 3)	FREE	FREE
senior citizen (65 and over)	£13.50	£10.25
family (2 adults and 2 children)	£56.00	£44.00

peak Saturday and Sunday

off peak Monday to Friday

Buy online and save 18% off the normal ticket price

The Lawson family are 2 adults, 2 children over the age of 3 and 1 senior citizen.
They will visit the safari park on Sunday.

Mrs Lawson uses the online offer to pay for the tickets for all the family.
She wants to pay as little as possible.

How much will Mrs Lawson pay in total for all the tickets?

(5)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Identify family members and determine best ticket option *[M1 figures]*

Family: 2 adults, 2 children (over 3), 1 senior citizen (Sunday = Peak)

Option A (All individual tickets):

- **2 Adults = 2 × £17.80 = £35.60**
- **2 Children = 2 × £12.50 = £25.00**
- **1 Senior citizen = 1 × £13.50 = £13.50**

Total Individual = £35.60 + £25.00 + £13.50 = £74.10

Option B (Family ticket + 1 senior citizen ticket): *[M1 combo]*

- **1 Family ticket (2 adults + 2 children) = £56.00**
- **1 Senior citizen ticket = £13.50**

Total Normal Price = £56.00 + £13.50 = £69.50 (Cheaper by £4.60)

Step 2: Apply 18% online discount to normal ticket price (£69.50) *[M1 discount]*

Discount amount = 18% of £69.50

= 0.18 × £69.50 = £12.51 savings

Step 3: Calculate total amount payable after discount *[M1 subtract]*

Total to pay = £69.50 − £12.51 = £56.99

Alternative multiplier: (100% − 18%) = 82% --> 0.82 × £69.50 = £56.99

Final Answer with correct money notation:

Total cost for all tickets = £56.99 *[A1 answer]*

Check: £56.99 ÷ 0.82 = £69.50 normal price (verified)

(Total for Question 4 is 5 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

5 The Lawson family need to plan their day at the safari park.
They will arrive at 10.30 am and leave no later than 3.30 pm.

They want to do the following activities

safari drive	1.5 hours
play park	20 mins
bird display	$\frac{3}{4}$ of an hour, starts at 11.30 am or 1.30 pm or 3 pm
wild trail	40 mins
lunch	$\frac{1}{2}$ an hour between 12 noon and 1 pm.

They need to allow at least 10 minutes between each of these activities.

Design a plan of the day for the Lawson family.
Remember to show the start and end times for each activity. **(4)**

Use the box below to show clearly how you get your answer.

Timetable Plan (10.30 am to 3.30 pm) with ≥ 10-minute intervals: *[M1 plan]*

Activity	Time Slot	Duration	Interval
Safari Drive	10:30 am – 12:00 pm	90 mins (1.5 h)	10 mins gap
Lunch (12–1 pm)	12:10 pm – 12:40 pm	30 mins (1/2 h)	10 mins gap
Play Park	12:50 pm – 1:10 pm	20 mins	20 mins gap
Bird Display	1:30 pm – 2:15 pm	45 mins (3/4 h)	10 mins gap
Wild Trail	2:25 pm – 3:05 pm	40 mins	25 mins spare
Park Departure	3:05 pm (Leaves ≤ 3:30)	All done	✓ Meets all rules

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Checklist of Rules and Constraints Satisfied: [A1 complete plan]

1. Arrival & Departure:

Arrive 10.30 am, activities conclude by 3.05 pm (well before 3.30 pm deadline).

2. Safari Drive (1.5 h):

Scheduled 10.30 am – 12.00 pm (exact 90 minutes). [M1 activity time]

3. Lunch Window:

Scheduled 12.10 pm – 12.40 pm (30 minutes, strictly between 12.00 pm and 1.00 pm). [M1 lunch]

4. Play Park (20 mins):

Scheduled 12.50 pm – 1.10 pm (exact 20 minutes).

5. Bird Display (45 mins):

Scheduled 1.30 pm – 2.15 pm (matches official scheduled start slot of 1.30 pm).

6. Wild Trail (40 mins):

Scheduled 2.25 pm – 3.05 pm (exact 40 minutes).

7. Intervals (≥ 10 mins):

All intervals between activities: 10m, 10m, 20m, 10m (all ≥ 10 mins). [M1 intervals]

Conclusion: Fully valid, realistic and clash-free day plan created.

(Total for Question 5 is 4 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

6 At the safari park Mrs Lawson sees this offer.

Special Offer

$\frac{1}{3}$ off the cost of all photographs today

The normal price of a photograph is £12.60

How much is the cost of a photograph with this special offer?
Show a check of your answer. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate 1/3 discount off normal price (£12.60) *[M1 discount]*

Discount = 1/3 × £12.60 = £12.60 ÷ 3 = £4.20

Step 2: Subtract discount to find special offer price *[M1 price]*

Special Offer Price = £12.60 − £4.20 = £8.40

(Alternative method: 2/3 × £12.60 = 2 × £4.20 = £8.40)

Cost of photograph = £8.40 *[A1 answer]*

Use the box below to show your check.

☑

Reverse calculation check: *[B1 check]*

£8.40 + £4.20 (discount) = £12.60 (matches normal price) (correct)

Or: £8.40 ÷ 2 × 3 = £4.20 × 3 = £12.60

(Total for Question 6 is 3 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

7 The Lawson family live 65 miles from the safari park.
They will leave the park at 3.30 pm.

The average speed of the journey home will be 50 mph.
They need to arrive home by 4.45 pm.

Will the Lawson family arrive home by 4.45 pm?

(4)

Use the box below to show clearly how you get your answer.

Step 1: Calculate journey time at average speed of 50 mph *[M1 time]*

Time = Distance ÷ Speed = 65 miles ÷ 50 mph

Time = 1.3 hours

Step 2: Convert 1.3 hours into hours and minutes *[M1 convert]*

0.3 hours = 0.3 × 60 minutes = 18 minutes

Total Time = 1 hour 18 minutes (or 78 minutes)

Step 3: Calculate actual arrival time (departing at 3.30 pm) *[M1 arrival]*

Arrival Time = 3:30 pm + 1 hr 18 min = 4:48 pm

Step 4: Compare with deadline (4.45 pm / 75 minutes available)

Available time from 3:30 to 4:45 pm = 1 hr 15 mins (75 minutes)

78 mins > 75 mins (journey takes 3 minutes too long; arrives at 4:48 pm)

[A1 decision]

Conclusion: No, the Lawson family will NOT arrive home by 4.45 pm.

(Total for Question 7 is 4 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

SECTION C: The park

Answer all questions in this section.

Write your answers in the spaces provided.

8 Josh is redesigning the local park.
He wants to include 3 components, a play area, a water feature and a garden.

Josh asks local residents to choose one option from each component

- play area (slide or climbing wall)
- water feature (lake or fountain)
- garden (roses or trees).

Josh also asks how many times each of these residents visit the park each month

- 0 to 1
- 2 to 5
- 6 or more.

He needs to record the answers on a data collection sheet.

Design a data collection sheet for Josh.

(3)

Use the box below to show clearly how you get your answer.

Data Collection Matrix (Two-Way Tally & Frequency Sheet): [M1 design]

Monthly Visits	Play Area		Water Feature		Garden	
	Slide	Climb Wall	Lake	Fountain	Roses	Trees
0 to 1 visits	////	//	//// /	/	///	///
2 to 5 visits	//// //	////	//// ///	///	//// /	//// /
6 or more visits	///	//// /	////	//// /	////	//// //
Total Frequency	14	12	18	8	15	16

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Design Specification & Assessment Criteria Met: [A1 efficiency]

1. Comprehensive Variables:

Sheet includes all 3 park components (Play area, Water feature, Garden) alongside visit frequency.

2. Full Mutually Exclusive Categories:

Every specific option is represented: Slide vs Climbing wall, Lake vs Fountain, Roses vs Trees, and frequency bands (0-1, 2-5, 6+).

3. Dual Recording (Tally & Frequency):

Spacious individual cells permit live tallying during interviews followed by numeric total frequencies.

4. Efficiency & Usability:

A single two-way matrix captures all resident responses in one concise, orderly layout without separate questionnaires.

✓ Fully compliant, professional data collection sheet designed.

(Total for Question 8 is 3 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

9 The residents decide to have a lake in the park.
There will be a grass path around the lake.

The lake will be circular with a diameter of 95 m.
The grass path will be 4 m wide.

Josh has this sketch of the lake and the path.

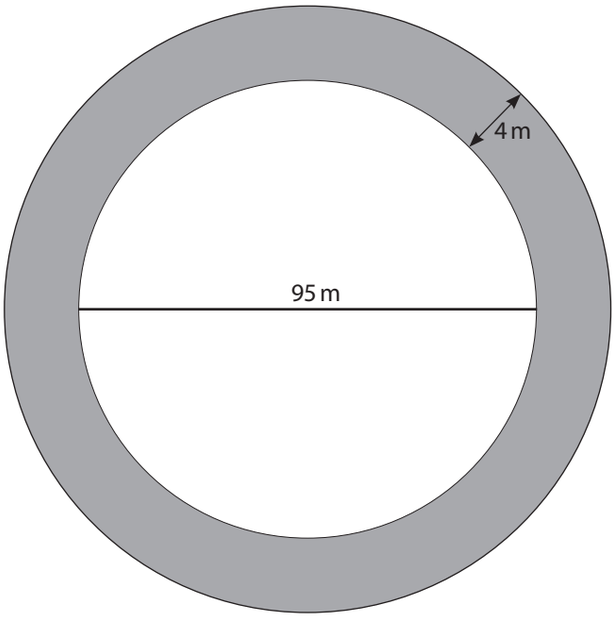

Diagram **not** accurately drawn.

$A = \pi r^2$

A = area of a circle
r = radius of a circle
use $\pi = 3.14$

Josh needs to order enough grass seed for the path around the lake.

Work out the area of the path for Josh.

(5)

Use the box below to show clearly how you get your answer.

Step 1: Find radius of the inner circular lake (r_1) *[M1 inner radius]*

Diameter of lake = 95 m

Radius of lake (r) = 95 ÷ 2 = 47.5 m

Step 2: Find radius of the outer circle (lake + 4m grass path) (r_2) *[M1 outer radius]*

Grass path width = 4 m

Outer radius (r) = 47.5 + 4 = 51.5 m

(Or: Outer diameter = 95 + 4 + 4 = 103 m; 103 ÷ 2 = 51.5 m)

Formula: Area of circle A = πr^2 (using $\pi = 3.14$ as specified)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Step 3: Calculate area of outer circle (lake + grass path) [M1 outer area]

Outer Area = $3.14 \times (51.5)^2 = 3.14 \times 2,652.25$

Outer Area = $8,328.065\ m^2$

Step 4: Calculate area of inner circle (lake alone) [M1 inner area]

Lake Area = $3.14 \times (47.5)^2 = 3.14 \times 2,256.25$

Lake Area = $7,084.625\ m^2$

Step 5: Calculate area of the grass path (Outer Area – Inner Area) [M1 subtract]

Path Area = $8,328.065 - 7,084.625$

Path Area = $1,243.44\ m^2$

Final Answer with correct area units:

Area of the grass path = $1,243.44\ m^2$ [A1 answer]

(Note: Using full calculator π gives: 8332.29 – 7088.22 = 1244.07 m^2)

(Total for Question 9 is 5 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

10 Josh creates a picnic area in the park.

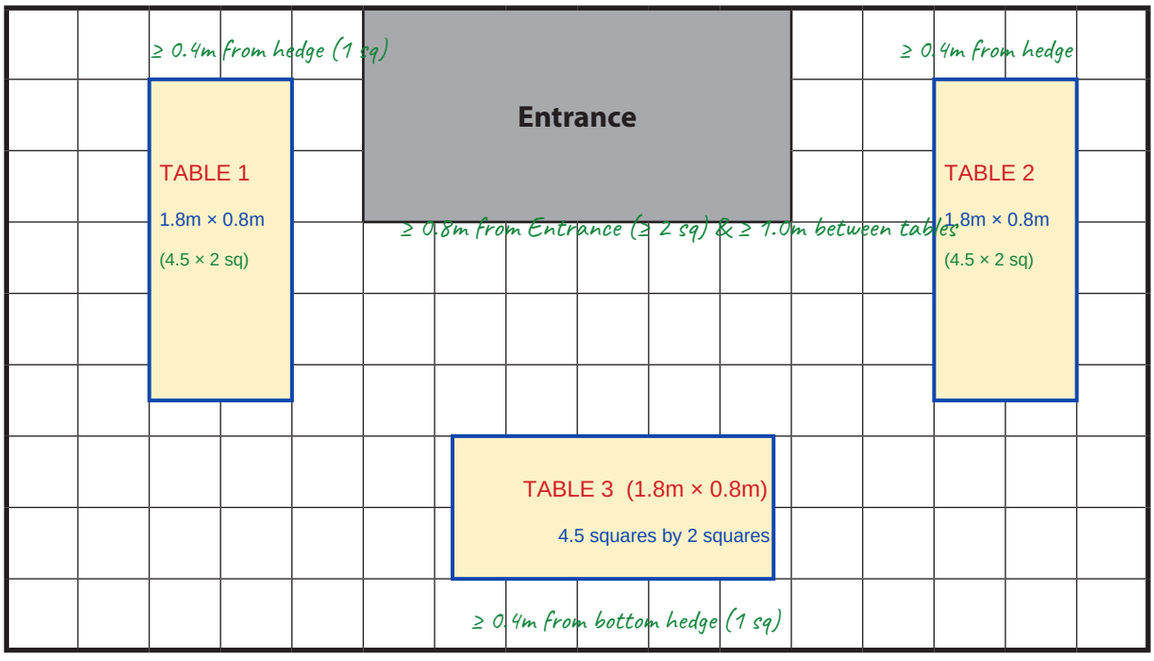

He wants to put 3 identical tables in the picnic area.

Each table needs a rectangular space 1.8 m by 0.8 m.

The tables must be at least

- 0.8 m away from the entrance space
- 0.4 m away from the hedge
- 1 m away from each other.

Josh has this scale diagram of the picnic area.

Key 1 square on the grid is 40 cm by 40 cm on the picnic area

——— hedge

[A1 scale diagram]

(a) On the grid above draw the spaces for the tables for Josh.

(3)

Josh needs to build a concrete base for each of the 3 tables.

Each concrete base must be a cuboid 0.8 m by 1.8 m by 12 cm.

Josh thinks 0.5 m^3 of concrete will be enough to build all 3 bases.

(b) Is Josh correct?
Show why you think this.

(4)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Convert all base dimensions to metres [M1 convert]

Length = 1.8 m, Width = 0.8 m

Depth = 12 cm = 12 ÷ 100 = 0.12 m

Step 2: Calculate volume of 1 concrete base (cuboid = l × w × d) [M1 volume]

Volume of 1 base = 1.8 × 0.8 × 0.12 = 0.1728 m^3

Step 3: Calculate total volume of concrete for all 3 bases [M1 total]

Total Concrete Required = 3 × 0.1728 m^3 = 0.5184 m^3

Step 4: Compare with Josh's claim (0.5 m^3)

0.5184 m^3 > 0.5 m^3 (short of concrete by 0.5184 − 0.5 = 0.0184 m^3)

[A1 decision]

Conclusion: No, Josh is NOT correct (0.5 m^3 is not enough).

Josh wants to double the depth of the concrete bases.
He thinks he needs to double the total amount of concrete.

(c) Is Josh correct?
Explain why you think this. **(1)**

Use the box below to write your answer.

Evaluative Decision & Explanation on Doubling Depth: [A1 decision]

Yes, Josh is correct.

Explanation: The volume of a cuboid is given by Length × Width × Depth.

Since the length and width stay the same and only depth is doubled (× 2),

the volume is directly proportional to depth: $V_{new} = L \times W \times (2D) = 2 \times (L \times W \times D)$.

Therefore, the total amount of concrete required doubles exactly (e.g. 2 × 0.5184 = 1.0368 m^3).
