Master Functional Skills	Model Solutions (MFS)

Pearson Edexcel Functional Skills

Centre Number	Candidate Number
MFS-UK	L2-MAY18

Mathematics

Level 2

30 April – 4 May 2018
Time: 1 hour 30 minutes

Paper Reference
FSM02/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

SECTION A: Car trader

Answer all questions in this section.

Write your answers in the spaces provided.

1 Adam works for a car trading company.

He has this information about the number of cars sold by the company in the first six months of 2017

	Jan	Feb	Mar	Apr	May	Jun
Number of cars sold	31	28	46	52	44	62

Adam says

> The mean number of cars sold each month in this period was more than 42
>
> The number of cars sold in June 2017 was more than $\frac{1}{5}$ of the number of cars sold from the beginning of January to the end of June.

(a) Is Adam correct?
Show why you think this. **(4)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Part 1: Check Statement 1 – Mean monthly cars sold > 42 *[M1 sum]*

Total cars sold (Jan–Jun) = 31 + 28 + 46 + 52 + 44 + 62

Total cars sold = 263 cars

Calculate mean monthly sales (Total ÷ 6 months): *[M1 mean]*

Mean = 263 ÷ 6 = 43.833... ≈ 43.8 cars per month

43.83 > 42 (Mean is greater than 42 by 1.83 cars) Statement 1 is TRUE

Part 2: Check Statement 2 – June sales > 1/5 of total 6-month sales *[M1 fraction]*

Number of cars sold in June = 62 cars

1/5 of total sales = 263 ÷ 5 = 52.6 cars

62 > 52.6 (June sales exceeded 1/5 by 9.4 cars) Statement 2 is TRUE

Alternative percentage check for Statement 2:

June proportion = (62 ÷ 263) × 100 = 23.57...% > 20% (1/5)

Final Conclusion & Decision:

[A1 decision]

Conclusion: Yes, Adam is correct on both statements.

(Mean was 43.83 > 42, and June sales of 62 were > 52.6).

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Adam has an annual target to sell 94 cars a year.

Adam gets a bonus if he meets his target.
His bonus is

- 1.75% of the total sales he makes in a year
- an extra £150 for each car he sells over his target.

In 2017 Adam sold 114 cars and the total sales he made were £316 400

Adam thinks he will get a bonus of more than £8000 for 2017

(b) Will Adam get a bonus of more than £8000?

(4)

Use the box below to show clearly how you get your answer.

Step 1: Calculate percentage bonus (1.75% of total annual sales) *[M1 sales %]*

Sales Bonus = 1.75% of £316,400

= 0.0175 × £316,400 = £5,537.00

Step 2: Calculate extra car bonus (£150 per car sold over target of 94) *[M1 extra cars]*

Cars over target = 114 − 94 = 20 extra cars

Extra Car Bonus = 20 × £150 = £3,000.00

Step 3: Calculate total bonus for 2017 *[M1 total bonus]*

Total Bonus = £5,537 + £3,000 = £8,537.00

Step 4: Compare total bonus with Adam's claim (> £8,000)

£8,537 > £8,000 (exceeds £8,000 target by £537.00)

[A1 decision]

Conclusion: Yes, Adam will get a bonus of more than £8,000.

Verification: £8,000 − £5,537 = £2,463 needed; £2,463 ÷ £150 = 16.42 cars; 20 > 16.42 cars (verified)

(Total for Question 1 is 8 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

2 Adam offers 3 payment options to car buyers.

The payment options are

A) cash
B) instalments
C) lease.

Adam sold 114 cars last year

- 19 cars with option A
- 57 cars with option B
- the remaining cars with option C.

Adam is going to write a report for his manager.
He needs to show the ratio of the number of cars sold using each payment option in the form A : B : C

Write down the ratio in the form A : B : C
Give the ratio in its simplest form. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate the number of cars sold with option C (lease) *[M1 option C]*

Total cars sold = 114 cars

Option A (cash) = 19 cars, Option B (instalments) = 57 cars

Option C = 114 − 19 − 57 = 38 cars

Step 2: Write down the unsimplified ratio A : B : C *[M1 ratio]*

Ratio A : B : C = 19 : 57 : 38

Step 3: Simplify the ratio by dividing by highest common factor (19)

19 ÷ 19 = 1, 57 ÷ 19 = 3, 38 ÷ 19 = 2

Simplest Form Ratio = 1 : 3 : 2 *[A1 answer]*

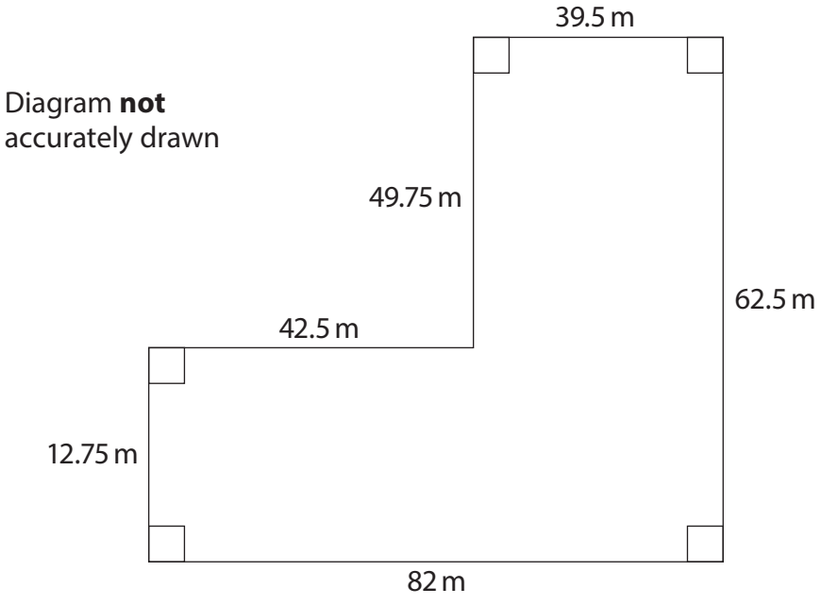

Check: Total parts = 1 + 3 + 2 = 6 parts; 114 ÷ 6 = 19 cars per part (19, 57, 38) (verified)

(Total for Question 2 is 3 marks)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 Kali works for a building company.
She needs to put a new surface on the car park of the car trading company.

The diagram shows the section of the car park that needs a new surface.

Kali will cover the whole section of the car park with concrete.
The concrete will be 0.09 m deep.

What is the total volume of concrete Kali will need?
Show a check of your working. **(5)**

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Split L-shaped car park into two simple rectangles [M1 split]

Rectangle 1 (Left): 39.5 m wide by 62.5 m long

Area 1 = 39.5 × 62.5 = 2,468.75 m^2

Rectangle 2 (Bottom right): 42.5 m wide by 12.75 m long

Area 2 = 42.5 × 12.75 = 541.875 m^2

Step 2: Calculate total surface area of car park [M1 total area]

Total Area = 2,468.75 + 541.875 = 3,010.625 m^2

(Alternative: Full bounding box 82 × 62.5 − cutout 42.5 × 49.75 = 5,125 − 2,114.375 = 3,010.625 m^2)

Step 3: Calculate volume of concrete (Area × Depth) [M1 volume]

Depth of concrete = 0.09 m

Volume = 3,010.625 m^2 × 0.09 m

= 270.95625 m^3

Final Answer with appropriate rounding & units:

Total Volume of Concrete = 270.96 m^3 (or 271 m^3)

[A1 answer]

Use the box below to show your check.

☑

Reverse division check: [B1 check]

270.95625 ÷ 0.09 = 3,010.625 m^2 (matches area exactly)

Estimation: 3,000 m^2 × 0.1 m = 300 m^3 ≈ 271 m^3 (realistic) (correct)

(Total for Question 3 is 5 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

SECTION B: Theatre

Answer all questions in this section.

Write your answers in the spaces provided.

4 Catherine works in a theatre.
She sets the price of tickets for a new show.

Catherine uses this formula to find the price of a ticket for a seat in the stalls.

$$P = \frac{6500}{x + 0.9y}$$

P is the normal price of a ticket for a seat in the stalls (£)
x is the total number of seats in the stalls
y is the total number of seats in the balcony

The theatre has

- 180 seats in the stalls
- 70 seats in the balcony.

On Monday Catherine sells 45 tickets for seats in the stalls to a school.
She charges 60% of the normal ticket price for each seat.

(a) Work out the total amount Catherine should charge the school.

(5)

Use the box below to show clearly how you get your answer.

Step 1: Substitute seats into formula denominator: x + 0.9y *[M1 sub]*

x = 180 stalls seats, y = 70 balcony seats

Denominator = 180 + (0.9 × 70) = 180 + 63 = 243

Step 2: Calculate normal ticket price for stalls seat (P) *[M1 normal P]*

P = 6,500 ÷ 243 = £26.74897... per ticket

Step 3: Apply 40% discount for school (school pays 60% of normal price) *[M1 discount]*

Discounted Price = 0.60 × £26.74897... = £16.04938... per ticket

Total for 45 tickets = 45 × £16.04938... = £722.22
[A1 answer]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Catherine checks the formula.
She realises the figure 6500 should have been 6000

(b) What effect does this error have on the price of a ticket for a seat in the stalls?

(1)

Use the box below to write your comment.

Comment on Effect of Error: *[A1 comment]*

The price of a ticket will decrease (it will be lower).

Because the numerator is smaller (6000 < 6500), so 6000 ÷ 243 = £24.69 < £26.75.

Catherine wants to record information about the people who see the new show on Friday.

She wants to know their

- gender (female, male)
- age (16–24, 25 and over)
- rating for the show (excellent, good, poor).

(c) Design a data collection sheet for Catherine.

(3)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show your data collection sheet.

Two-Way Audience Feedback Collection Sheet (Tally & Frequency): *[M1 design]*

	Male		Female	
Show Rating	16 · 24	25 & over	16 · 24	25 & over
Excellent	//// ///	//// ////	//// ////	//// //// //
Good	//// /	//// //	//// ///	//// /
Poor	//	/	///	//
Total Audience	16	18	21	20

Key Design Features & Standards Met: *[A1 efficiency]*

- **Gender Categories:**
  Separate primary columns for Female and Male.
- **Age Group Subdivisions:**
  Distinct sub-columns for 16–24 and 25 & over within each gender.
- **Rating Hierarchy:**
  Dedicated row options for Excellent, Good, and Poor with tally spaces and totals.
- **Data Efficiency:**
  Allows instant tally recording as audience members exit the theatre.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

6 Catherine sells bags of popcorn at the theatre.
The bags come in three sizes.

small	medium	large
60 g	150 g	250 g
£1.49	£3.99	£5.99

Catherine thinks the medium bag of popcorn is the best value for money.

Is the medium bag of popcorn the best value for money?

(3)

Use the box below to show clearly how you get your answer.

Step 1: Calculate cost per gram (or price per 100g) for each bag *[M1 rate]*

- **Large bag (250 g for £5.99):**

  Cost per gram = £5.99 ÷ 250 g = £0.02396 / g (= £2.40 per 100g)

- **Medium bag (150 g for £3.99):**

  Cost per gram = £3.99 ÷ 150 g = £0.02660 / g (= £2.66 per 100g)

- **Small bag (60 g for £1.49):**

  Cost per gram = £1.49 ÷ 60 g = £0.02483 / g (= £2.48 per 100g)

Step 2: Compare value across all three sizes *[M1 compare]*

Lowest cost per gram = Large bag (£0.02396 / g)

Highest cost per gram = Medium bag (£0.02660 / g) (Worst Value!)

Conclusion & Decision:

[A1 decision]

Conclusion: No, the medium bag is NOT the best value for money.

(The large bag is the best value at 2.40p/g; medium is dearest at 2.66p/g).

(Total for Question 6 is 3 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

SECTION C: Garden party

Answer all questions in this section.

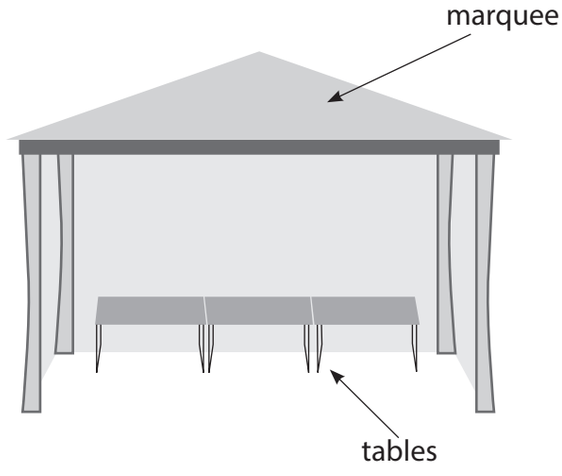

Write your answers in the spaces provided.

7 Fez and Zoe are organising a garden party for their wedding anniversary.

Fez wants to hire a marquee for 2 days.

He finds information about some marquees.

marquee	**A**	**B**	**C**
size (L by W)	6 m by 3 m	3 m by 3 m	4 m by 4 m
hire charge per day	£67	£59	£74
delivery and set up	£49.95	£41.99	£39.99

The marquee needs to be big enough to fully cover

- 3 rectangular tables, each 150 cm by 90 cm, joined together along the same edge (short edge or long edge) with no gap between them
- 50 cm free space around the joined tables for people to walk around.

Fez wants to spend the least amount of money for the marquee hire, delivery and set up.

(a) Which marquee should Fez choose?
Show why you think this. **(5)**

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Calculate required dimensions for 3 joined tables + 50 cm border [M1 dimensions]

Each table: Length = 150 cm = 1.5 m, Width = 90 cm = 0.9 m

Arrangement 1 (Joined along 90 cm edge in a long line):

- Tables Length = 3 × 1.5 m = 4.5 m, Width = 0.9 m
- Space needed (adding 50 cm = 0.5 m each side):

  Required Length = 4.5 + 2 × 0.5 = 5.5 m

  Required Width = 0.9 + 2 × 0.5 = 1.9 m --> Fits in 6m × 3m (Marquee A)

Arrangement 2 (Joined along 150 cm edge side-by-side):

- Tables Length = 1.5 m, Width = 3 × 0.9 m = 2.7 m
- Space needed: Length = 1.5 + 1.0 = 2.5 m, Width = 2.7 + 1.0 = 3.7 m

  --> Fits in 4m × 4m (Marquee C)

Step 2: Check which marquees can accommodate the tables

- Marquee A (6m × 3m): FITS Arrangement 1 (5.5m ≤ 6m and 1.9m ≤ 3m)
- Marquee B (3m × 3m): TOO SMALL (3m < 5.5m and 3m < 3.7m) --> Eliminated
- Marquee C (4m × 4m): FITS Arrangement 2 (2.5m ≤ 4m and 3.7m ≤ 4m)

Step 3: Compare total hire costs for 2 days + delivery/setup [M1 cost]

- Marquee A: (2 days × £67) + £49.95 = £134.00 + £49.95 = £183.95
- Marquee C: (2 days × £74) + £39.99 = £148.00 + £39.99 = £187.99

Conclusion (Fez wants to spend the least amount of money):

Fez should choose Marquee A (Total cost £183.95). [A1 decision]

(Marquee A is £4.04 cheaper than Marquee C: £183.95 < £187.99).

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Fez needs to organise some food for the party.

There will be 80 people at the party.
A catering company has this offer for hot meals

non-vegetarian	£19.95 per person
vegetarian	£14.95 per person

Special offer
get $\frac{1}{3}$ off your total bill

Fez uses this offer.

He will order vegetarian meals for 49 people and non-vegetarian meals for the remaining people.

Fez has a budget of £1000 for all the meals.

(b) Is £1000 enough for all the meals?

(4)

Use the box below to show clearly how you get your answer.

Step 1: Calculate normal catering cost for 80 guests *[M1 meals]*

- 49 Vegetarian meals @ £14.95 = 49 × £14.95 = £732.55
- Non-veg meals = 80 − 49 = 31 guests
- 31 Non-vegetarian meals @ £19.95 = 31 × £19.95 = £618.45

Total Bill before discount = £732.55 + £618.45 = £1,351.00

Step 2: Apply 1/3 special offer discount (pay 2/3 of bill) *[M1 discount]*

Discount = 1/3 × £1,351.00 = £450.333...

Total to Pay = £1,351.00 − £450.333... = £900.666... ≈ £900.67

Step 3: Compare with Fez's budget (£1,000)

£900.67 < £1,000 (under budget by £1,000 − £900.67 = £99.33)

[A1 decision]

Conclusion: Yes, £1,000 is enough for all the meals.

(Total for Question 7 is 9 marks)

8 Zoe needs to do some things before the party.
This is her list.

- 11:45 am hair appointment at salon (one and a half hours)
- then collect the cake from the bakery (10 minutes)
- finally, buy decorations at the arcade (a quarter of an hour)

She knows that it takes

- 13 minutes to drive from the salon to the bakery
- 12 minutes to drive from the bakery to the arcade
- 16 minutes to drive from the arcade to her home.

These times include time to park her car.

Zoe wants to do all the things on the list and return home by 2:30 pm.

Can Zoe do all the things on the list and return home by 2:30 pm?

(3)

Use the box below to show clearly how you get your answer.

Timeline Schedule (Starting at 11:45 am): *[M1 time]*

- 11:45 am to 1:15 pm: Salon hair appointment (1 h 30 min = 90 mins)
- 1:15 pm to 1:28 pm: Drive salon to bakery (13 mins)
- 1:28 pm to 1:38 pm: Collect cake at bakery (10 mins)
- 1:38 pm to 1:50 pm: Drive bakery to arcade (12 mins)
- 1:50 pm to 2:05 pm: Buy decorations at arcade (15 mins)
- 2:05 pm to 2:21 pm: Drive arcade to home (16 mins)

Total Duration & Arrival Calculation: *[M1 total]*

Total time = 90 + 13 + 10 + 12 + 15 + 16 = 156 mins (2 h 36 min)

Arrival Home = 11:45 am + 2 h 36 min = 2:21 pm (9 minutes before 2:30 pm)

[A1 decision]

Conclusion: Yes, Zoe can do all things and return home by 2:30 pm.

(Total for Question 8 is 3 marks)

9 Zoe prepares some lemonade for the party.

She needs to use $\frac{3}{4}$ of a kilogram of sugar.

Zoe knows that 1 kg is 2.2 pounds.

(a) What is $\frac{3}{4}$ of a kilogram in pounds?
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Convert fraction 3/4 kg to decimal

3/4 kg = 3 ÷ 4 = 0.75 kg

Step 2: Multiply by conversion factor (1 kg = 2.2 pounds) *[M1 convert]*

Weight in pounds = 0.75 × 2.2

= 1.65 pounds

Final Answer with units:

3/4 kg = 1.65 pounds *[A1 answer]*

Use the box below to show your check.

☑

Reverse calculation check: *[B1 check]*

1.65 ÷ 2.2 = 0.75 kg = 3/4 kg (matches original quantity exactly)

Or: 1/4 kg = 0.55 lb; 3 × 0.55 lb = 1.65 pounds (verified) (correct)
