MFS-UK	L2-SAM

Sample assessment material for first teaching September 2019

Time: 25 minutes | Paper Reference **SAML2/01**

Mathematics

Level 2
Section A (Non – Calculator)

You must have:
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses.

Total Marks 16 /16

My signature confirms that I will not discuss the content of the test with anyone.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and your answers at each stage.
- Diagrams are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used**
- Take the value of π to be 3.14

Information

- The total mark for this section is 16
- The marks for each question are shown in brackets.
  – *use this as a guide to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

Pearson

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

1 Ria works in a paint shop.
She needs to make 1500 ml of purple paint.

Ria makes purple paint by mixing red paint and blue paint and white paint in the ratio 3 : 2 : 1

How much blue paint does Ria need to make 1500 ml of purple paint?

(3)

Step 1: Calculate total ratio parts (red : blue : white = 3 : 2 : 1)

Total parts = 3 + 2 + 1 = 6 parts

Step 2: Find the volume of 1 ratio part

1 part = 1500 ml ÷ 6 = 250 ml *[M1 1 part]*

Step 3: Calculate the amount of blue paint (2 parts)

Blue paint = 2 parts × 250 ml = 500 ml
[M1 blue paint]

Check all components:

- **Red (3 parts) = 3 × 250 = 750 ml**
- **Blue (2 parts) = 2 × 250 = 500 ml**
- **White (1 part) = 1 × 250 = 250 ml**
- **Total = 750 + 500 + 250 = 1500 ml (correct)**

500 *[A1]* ml

(Total for Question 1 is 3 marks)

2 Here is some information about the number of houses sold by 20 sales people.

Number of houses sold	Frequency	Midpoint (x)	fx
1 – 5	7	3	21
6 – 10	6	8	48
11 – 15	5	13	65
16 – 20	2	18	36
			Total = 170

Work out an estimate for the mean number of houses sold.

(3)

Step 1: Find midpoints (x) and fx products (shown in table above)

- 1 to 5: midpoint 3 × 7 = 21 *[M1 midpoints & fx]*
- 6 to 10: midpoint 8 × 6 = 48
- 11 to 15: midpoint 13 × 5 = 65
- 16 to 20: midpoint 18 × 2 = 36

Step 2: Calculate total estimated houses sold (Sum of fx)

Total Houses = 21 + 48 + 65 + 36 = 170 houses

Step 3: Calculate estimated mean (Total fx ÷ Total salespeople)

Total salespeople = 7 + 6 + 5 + 2 = 20

Estimated Mean = 170 ÷ 20 = 8.5 houses

[M1 mean]

8.5 *[A1]*

(Total for Question 2 is 3 marks)

Pearson Edexcel Functional Skills Qualification in Mathematics at Level 2
Sample assessment materials (SAMs) – Issue 1 – June 2019 ©Pearson Education Limited 2019

3 Amanda wants to buy a new mobile phone.
She sees these two offers for the same mobile phone.

Offer A	**Offer B**
2 year contract monthly cost £59 and mobile phone cost £39.96	SIM only monthly cost £11 and mobile phone cost £889.92

Amanda says,

'I will save more than £300 in total over 2 years with offer B'.

Use estimation to check if her statement is reasonable.
You **must** show your working.

(4)

Step 1: Round values to convenient numbers for estimation *[M1 rounding]*

- Offer A: £59/mo ≈ £60/mo; Phone £39.96 ≈ £40
- Offer B: £11/mo ≈ £10/mo; Phone £889.92 ≈ £900
- Contract length: 2 years = 2 × 12 = 24 months

Step 2: Calculate estimated total cost for Offer A (24 months) *[M1 Offer A]*

Monthly = 24 × £60 = £1,440; Total = £1,440 + £40 = £1,480

Step 3: Calculate estimated total cost for Offer B (24 months) *[M1 Offer B]*

Monthly = 24 × £10 = £240; Total = £240 + £900 = £1,140

Step 4: Calculate estimated savings with Offer B

Estimated Savings = £1,480 − £1,140 = £340

Step 5: Compare with Amanda's statement (£300 savings)

£340 > £300 --> Amanda's statement IS reasonable.

[A1]

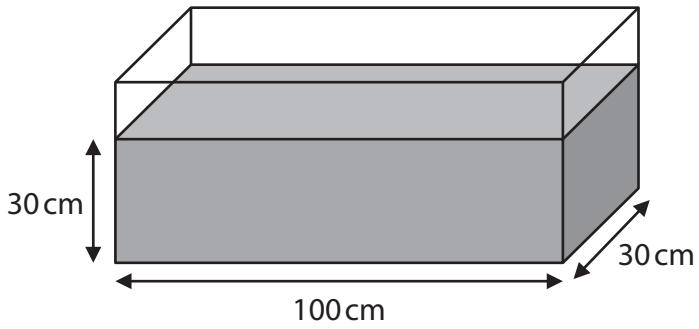

Yes, reasonable because estimated savings = £340 (> £300)

(Total for Question 3 is 4 marks)

4 Matt buys a new fish tank.

The fish tank is in the shape of a cuboid.

The diagram shows water in the tank.

Matt knows

1000 cm^3 = 1 litre

1 gallons = 4.5 litres

He can keep 2 small fish in the tank for every 1 gallon of water in the tank.

Matt thinks he can keep more than 36 small fish in the tank.

Is Matt correct?

(6)

Step 1: Calculate the volume of the fish tank in cm^3 *[M1 volume]*

Volume = length × width × height

Volume = 100 cm × 30 cm × 30 cm = 90,000 cm^3

Step 2: Convert volume to litres (1000 cm^3 = 1 litre) *[M1 litres]*

Litres = 90,000 cm^3 ÷ 1000 = 90 litres

Step 3: Convert litres to gallons (1 gallon = 4.5 litres) *[M1 gallons]*

Gallons = 90 litres ÷ 4.5 litres/gal = 20 gallons

(Complete evaluation and conclusion continue on next page -->)

Step 4: Calculate maximum number of fish allowed (2 fish per gallon) [M1 max fish]

Maximum Fish = 20 gallons × 2 fish/gallon = 40 fish

Alternative check using 36 fish:

- **Gallons needed for 36 fish = 36 ÷ 2 = 18 gallons**
- **Litres needed = 18 gallons × 4.5 L = 81 litres**
- **Available tank holds 90 litres > 81 litres (correct)**

Step 5: Compare capacity with Matt's 36 fish

40 fish ≥ 36 fish --> Matt CAN keep all 36 fish in this tank.

Yes, tank holds 20 gallons (up to 40 fish, which is more than 36)

Yes [A1]

(Total for Question 4 is 6 marks)

TOTAL FOR SECTION A = 16 MARKS

Please check the examination details below before entering your candidate information

S 6 4 8 5 3 A 0 1 2 0

Pearson

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

1 Data set A has a median value of 3.1

Here is data set B.

14 −9 28 −38 −13 −2

(a) Write a statement to compare the median values of the two sets of data.

(2)

Step 1: Order Data Set B from smallest to largest *[M1 ordering]*

Data Set B in order: −38, −13, −9, −2, 14, 28

Step 2: Calculate median of Data Set B (average of 3rd and 4th values)

Median of B = (−9 + −2) ÷ 2 = −11 ÷ 2 = −5.5

Step 3: Compare median of Data Set A (3.1) with Data Set B (−5.5)

3.1 > −5.5 (Data Set A median is 8.6 greater than Data Set B)

Data Set A has a higher median than Data Set B
Median A (3.1) > Median B (−5.5) *[A1]*

☑ (b) Show a check of your answer for the median of data set B.

(1)

Position count check for median (−5.5): *[A1 check]*

- **3 values lie below −5.5: −38, −13, −9**
- **3 values lie above −5.5: −2, 14, 28**
- **Reverse check: −5.5 × 2 = −11; −11 − (−2) = −9 (correct)**

(Total for Question 1 is 3 marks)

2 Dan throws two fair dice.

The numbers on dice A are 1 −2 3 −4 5 −6
The numbers on dice B are −1 2 −3 4 −5 6

The table shows some total scores from throwing the two dice.

Dice B \ Dice A	+	1	−2	3	−4	5	−6
	−1	0	−3	2	−5	4	−7
	2	3	0	5	−2	7	−4
	−3	−2	−5	0	−7	2	−9
	4	5	2	7	0	9	−2
	−5	−4	−7	−2	−9	0	−11
	6	7	4	9	2	11 [A1 table]	0

(a) Complete the table.

(1)

Dan throws the two dice once.

(b) What is the probability that the total score is −11?

(1)

1 outcome out of 36: (−5, −6)

1/36 [A1]

Dan throws the two dice again.

(c) What is the probability that the new total score is 0?

(1)

6 outcomes sum to 0 (diagonal)

6/36 (= 1/6) [A1]

(Total for Question 2 is 3 marks)

3 Last year Zack had two jobs.

Zack worked

- in an office for 12 months and earned £2600 per month
- at a gym for 39 weekends and earned £80 per weekend.

What fraction of his total income last year came from his work at the gym?
Write the fraction in its simplest form.

(4)

Step 1: Calculate annual income from office job *[M1 office]*

Office Income = 12 months × £2600 = £31,200

Step 2: Calculate annual income from gym job *[M1 gym]*

Gym Income = 39 weekends × £80 = £3,120

Step 3: Calculate total annual income from both jobs *[M1 total]*

Total Income = £31,200 + £3,120 = £34,320

Step 4: Form fraction and simplify to simplest form

Fraction = 3,120 / 34,320

Divide numerator & denominator by 3,120:

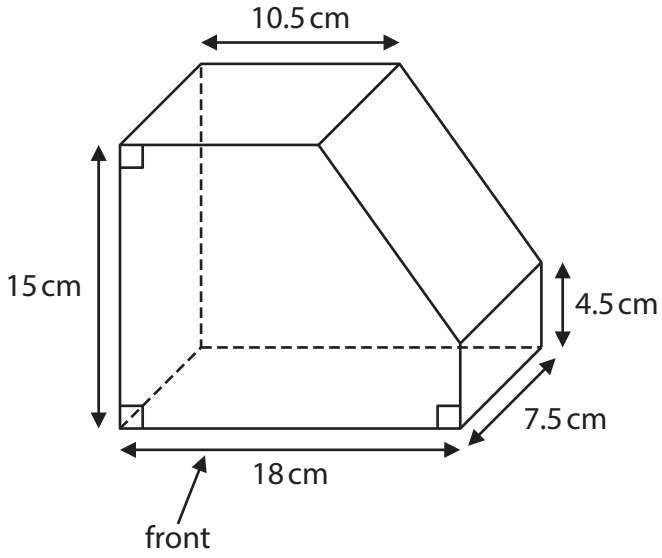

3,120 ÷ 3,120 = 1 and 34,320 ÷ 3,120 = 11

Simplest form = 1 / 11

Gym fraction = $\frac{1}{11}$ *[A1]*

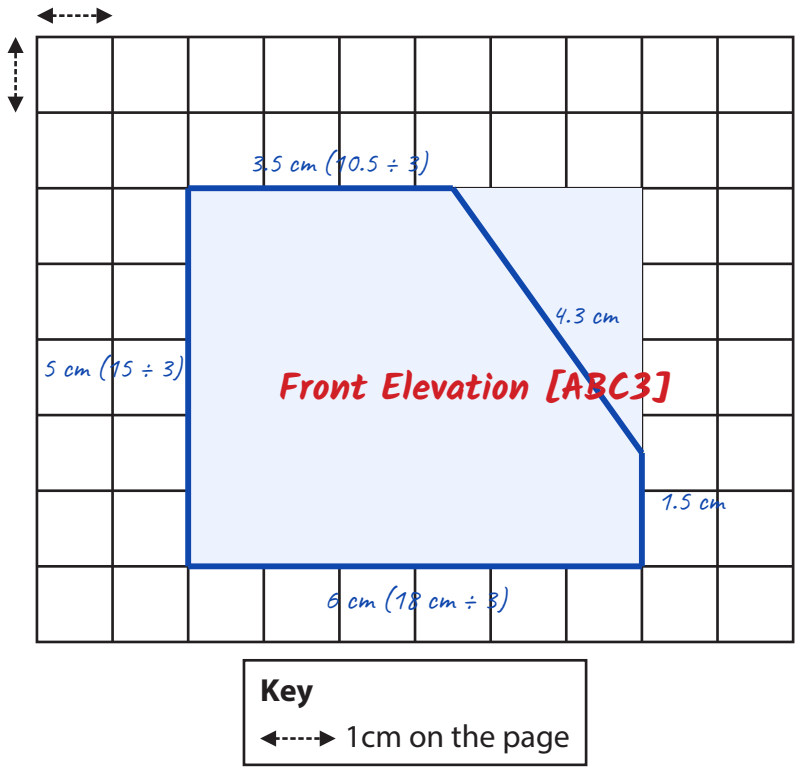

(Total for Question 3 is 4 marks)

4 Here is a prism.
The cross section of the prism is a pentagon.

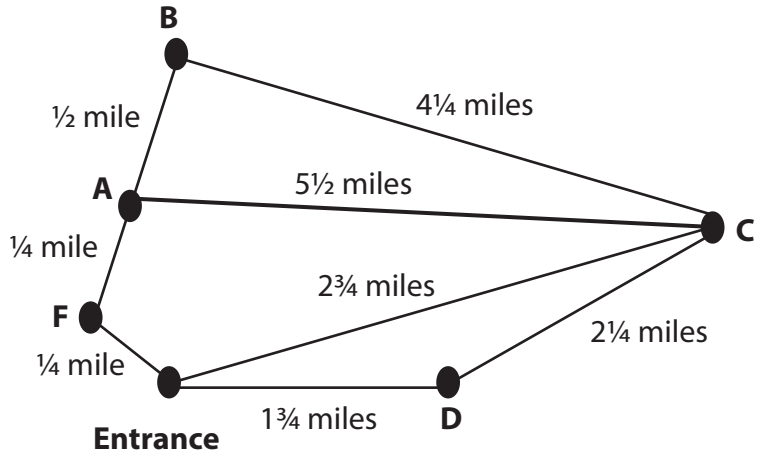

Draw the front elevation of the prism on the grid.
Use the scale 1 : 3

(3)

(Total for Question 4 is 3 marks)

5 Olga has this sketch of the paths in a park.

She wants a cycle route that

- starts and ends at the entrance
- goes through point C at least once
- has a total length between 15 **kilometres** and 20 **kilometres**.

1 km = 0.6 miles.

Plan a suitable route.
Work out the total distance of the route.

(5)

[M1 route]

Step 1: Plan candidate route on sketch (starts/ends at Entrance, via C):

Route: Entrance (E) -> D -> C -> A -> F -> Entrance (E)

Step 2: Sum the path distances in miles *[M1 total miles]*

- **E to D = 1¾ miles = 1.75 miles**
- **D to C = 2¼ miles = 2.25 miles**
- **C to A = 5½ miles = 5.50 miles**
- **A to F = ¼ mile = 0.25 miles**
- **F to E = ¼ mile = 0.25 miles**

Total = 1.75 + 2.25 + 5.50 + 0.25 + 0.25 = 10 miles

(Detailed km conversion and answer boxes continue on next page -->)

Pearson Edexcel Functional Skills Qualification in Mathematics at Level 2
Sample assessment materials (SAMs) – Issue 1 – June 2019 ©Pearson Education Limited 2019

Step 3: Convert distance from miles to kilometres (1 km = 0.6 miles) [M1 conversion]

Kilometres = 10 miles ÷ 0.6 = 16.67 km

Step 4: Check if total distance is between 15 km and 20 km

15 km < 16.67 km < 20 km --> Condition met!

Reverse check:

16.67 km × 0.6 = 10.0 miles (matches total path miles)

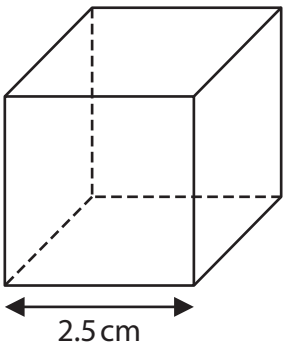

Route E -> D -> C -> A -> F -> E

Total distance [A1]

16.67 km

(Total for Question 5 is 5 marks)

6 Here is a cube of side length 2.5 cm.

Work out the surface area of this cube.

(3)

Step 1: Calculate the area of one square face of the cube *[M1 1 face]*

Face Area = length × width = 2.5 cm × 2.5 cm = 6.25 cm²

Step 2: Multiply by 6 (a cube has 6 identical square faces) *[M1 total SA]*

Total Surface Area = 6 × 6.25 cm² = 37.5 cm²

Check using expanded net:

- **6.25 + 6.25 + 6.25 + 6.25 + 6.25 + 6.25 = 37.5 cm² (correct)**

37.5 *[A1]* cm²

(Total for Question 6 is 3 marks)

7 Megan is the manager of a computer shop.
She organises a sale with 18% off all tablets.

Megan changes the price of one tablet from £389 to £330.98

(a) Has Megan changed the price correctly?

(3)

Step 1: Calculate 18% discount on the original price (£389) [M1 discount]

Discount = 18% of £389 = 0.18 × £389 = £70.02

Step 2: Calculate correct sale price after 18% discount [M1 sale price]

Correct Sale Price = £389 − £70.02 = £318.98

Or direct multiplier: £389 × (1 − 0.18) = £389 × 0.82 = £318.98

Step 3: Compare correct sale price with Megan's advertised price

£330.98 − £318.98 = £12.00 (advertised price is £12 too high!)

Therefore, Megan has NOT changed the price correctly.

No, correct price is £318.98, which is £12 cheaper than £330.98

No [A1]

☑ (b) Use estimation to show a check of your answer.

(1)

[A1 check]

Estimation check using rounded numbers (round 18% to 20%, £389 to £400):

- **20% of £400 = 0.20 × £400 = £80**
- **Estimated Sale Price = £400 − £80 = £320**
- **£320 is very close to £318.98, confirming exact calculation (correct)**

(Total for Question 7 is 4 marks)

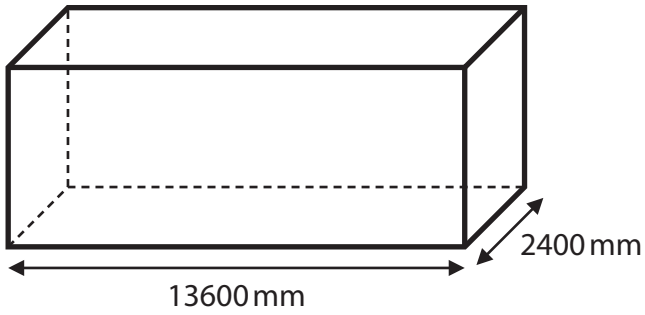

8 A team of workers deliver identical fridges.

The team will use the average time to fully load an old lorry to predict the time to fully load a new lorry.

The table shows the times it took to fully load the old lorry with 24 fridges.

Time (mins)	52	60	55	59	54	63	56

The diagram shows the space available for fridges in the new lorry.
The space is in the shape of a cuboid.

Each fridge needs a rectangular floor space 1000 mm by 800 mm.

The team do not stack fridges.

They think it will take less than 90 minutes to fully load the new lorry.

Are they correct?

(6)

Step 1: Calculate how many fridges fit into the lorry *[M1 fridges]*

- Length: 13,600 mm ÷ 1000 mm = 13 fridges
- Width: 2400 mm ÷ 800 mm = 3 fridges

Total Fridges = 13 × 3 = 39 fridges in new lorry

Step 2: Find median loading time for old lorry (24 fridges) *[M1 median]*

Order: 52, 54, 55, [56], 59, 60, 63 mins

Median loading time = 56 minutes

Pearson Edexcel Functional Skills Qualification in Mathematics at Level 2
Sample assessment materials (SAMs) – Issue 1 – June 2019 ©Pearson Education Limited 2019

Step 3: Calculate average loading time per single fridge [M1 rate]

Time per fridge = 56 mins ÷ 24 fridges = 2.333... minutes

Step 4: Predict time to fully load new lorry with 39 fridges [M1 total time]

Total Time = 39 fridges × (56 ÷ 24) = 91 minutes

Step 5: Compare predicted time with 90 minutes

91 minutes > 90 minutes (takes 1 min longer than 90 mins)

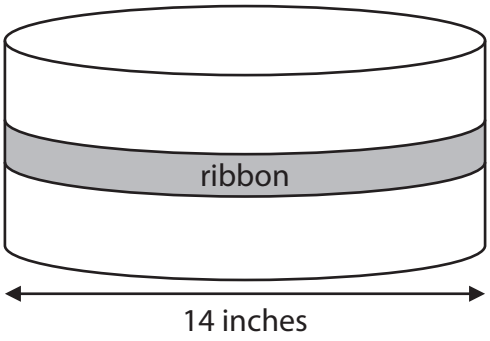

Therefore, they are NOT correct.

No, it will take 91 minutes to load 39 fridges (> 90 minutes)

No [A1]

(Total for Question 8 is 6 marks)

9 Louis makes a cake.
The cake is in the shape of a cylinder with diameter 14 inches.

Louis needs to put a ribbon around this cake.
The ribbon will go around the cake once with a 6 inch overlap.

Louis has a piece of ribbon 48 inches in length.

Is this piece of ribbon long enough for this cake?

(3)

Step 1: Calculate circumference of cake (diameter = 14 in) [M1 circ]

Circumference = π × d = π × 14 in ≈ 43.98 inches

Step 2: Add the required 6-inch overlap for the ribbon [M1 total]

Total Ribbon Needed = 43.98 + 6 inches = 49.98 inches

Step 3: Compare ribbon needed with available piece (48 inches)

49.98 inches > 48 inches (short by 49.98 − 48 = 1.98 inches)

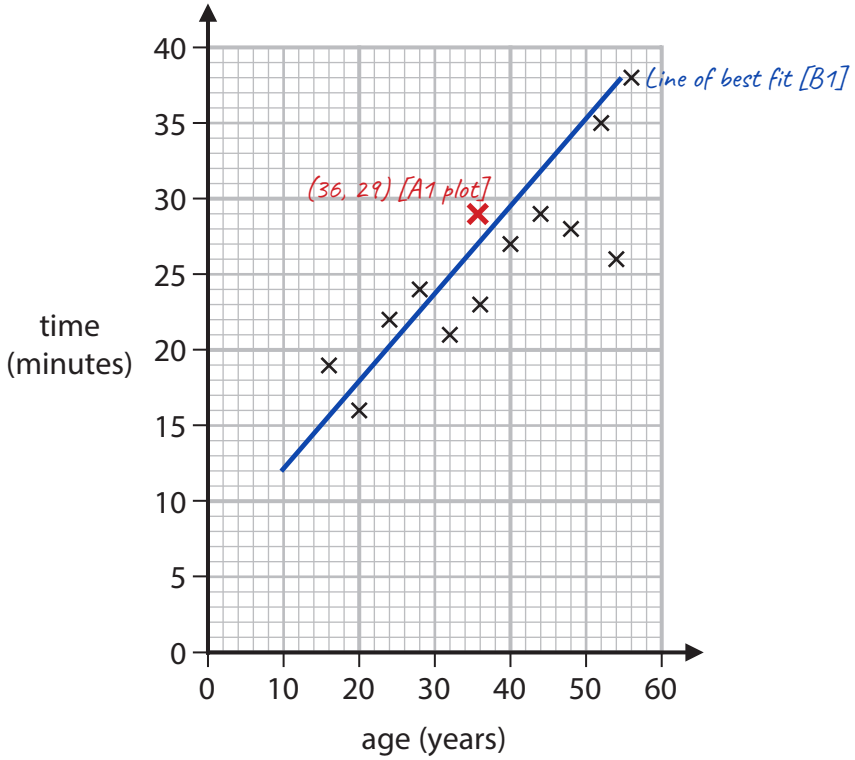

Therefore, the piece of ribbon is NOT long enough.

No, cake needs ~49.98 inches of ribbon, which is longer than 48 inches

No [A1]

(Total for Question 9 is 3 marks)

10 The scatter diagram shows some information about 12 athletes who have run a race.

Here is the information for another athlete

- age 36, time 29 minutes.

(a) Plot this information on the scatter diagram.

(1)

(b) Draw the line of best fit on the scatter diagram.

(1)

(c) Describe the relationship shown in this scatter diagram.

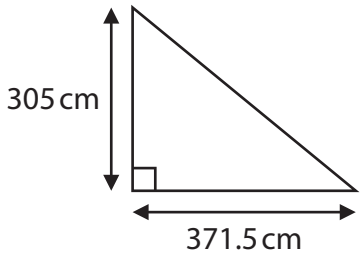

(1)

Positive correlation [A1]

As age increases, the time taken to run the race increases.

(Total for Question 10 is 3 marks)

11 George will cover part of a floor with tiles.
The part of the floor is in the shape of a triangle as shown.

George buys tiles in packs.
Each pack covers 1 m^2 and costs £39.95

The tiles can be cut and joined.
George gets $\frac{1}{3}$ off the cost of the packs of tiles.

Work out the lowest cost of the tiles for George.

(5)

Step 1: Convert triangle dimensions from cm to metres *[M1 units]*

- **Base = 305 cm = 3.05 m; Height = 371.5 cm = 3.715 m**

Step 2: Calculate area of triangular floor space *[M1 area]*

Area = (base × height) ÷ 2 = (3.05 m × 3.715 m) ÷ 2

Area = 11.33075 ÷ 2 = 5.665375 m^2

Step 3: Determine number of whole packs required (each covers 1 m^2) *[M1 packs]*

Packs needed = 5.665... m^2 ÷ 1 m^2/pack = 5.665... packs

Tiles must be bought in whole packs: round up to 6 whole packs!

(Discount and lowest cost calculation continue on next page -->)

Step 4: Apply special offer: 1/3 off the cost of the tile packs *[M1 cost]*

Normal Cost for 6 packs = 6 × £39.95 = £239.70

Discount = 1/3 of £239.70 = £239.70 ÷ 3 = £79.90

Step 5: Calculate final lowest cost for George *[M1 discount]*

Lowest Cost = £239.70 – £79.90 = £159.80

Check calculation:

- **6 packs with 1/3 off is equivalent to 4 packs at full price**
- **4 × £39.95 = £159.80 (correct)**

£ *[A1]* **159.80**

(Total for Question 11 is 5 marks)

12 Gabi wants to buy a flat.
The cost of the flat is £175 000

The bank uses this formula to work out the mortgage Gabi can get.

$$M = 4.625A$$

M = mortgage (£)
A = annual income (£)

Gabi has an annual income of £34 000
She will have to pay a deposit for the flat.
The deposit is the difference between the cost of the flat and the mortgage.

(a) Work out the deposit Gabi will have to pay.

(3)

[M1 mortgage]
Step 1: Calculate the maximum mortgage using formula $M = 4.625 \times A$

Mortgage (M) = 4.625 × £34,000 = £157,250

Step 2: Calculate the deposit required (Flat cost – Mortgage) [M1 deposit]

Deposit = £175,000 – £157,250 = £17,750

Check calculation:

- **£157,250 (mortgage) + £17,750 (deposit) = £175,000 (correct)**

£ [A1] **17,750**

Pearson Edexcel Functional Skills Qualification in Mathematics at Level 2
Sample assessment materials (SAMs) – Issue 1 – June 2019 ©Pearson Education Limited 2019

Gabi invests £4000 for 3 years.
The investment earns 2% compound interest per annum.

(b) Work out the value of the investment at the end of 3 years.

(3)

Step 1: Calculate compound multiplier for 2% annual interest *[M1 mult]*

Multiplier = 100% + 2% = 102% = 1.02 per year

Step 2: Year-by-year compound interest calculation *[M1 comp]*

- **End of Year 1: £4000 × 1.02 = £4080.00**
- **End of Year 2: £4080 × 1.02 = £4161.60**
- **End of Year 3: £4161.60 × 1.02 = £4244.832**

Step 3: Direct formula & rounding to 2 decimal places (pence)

Total Value = £4000 × $(1.02)^3$ = £4244.832

Rounded to pence = £4,244.83

£ **4,244.83**
[A1]

(Total for Question 12 is 6 marks)
