OFFICIAL STUDY MANUAL

MATHS LEVEL 2

Functional Skills Mathematics

Level 2 • Comprehensive Curriculum Guide • Section A & B Model Solutions

This book belongs to:	Exam date:	Target level:

What is inside

1–11	Strand 1: Number & Number Systems (28% of exam)	p. 3
12–21	Strand 2: Measures, Shape & Space (40% of exam)	p. 31
22–28	Strand 3: Handling Information & Data (32% of exam)	p. 61
C1–C3	3 End-of-Strand 4-Page Checkpoint Assessments	p. 79
M1–M2	2 Full Official-Style Mock Exams (Section A & B)	p. 91
ANS	Comprehensive Mark Schemes & Process Mark Guidance	p. 99

How to use this book

Read
Read the rule. Study the picture.

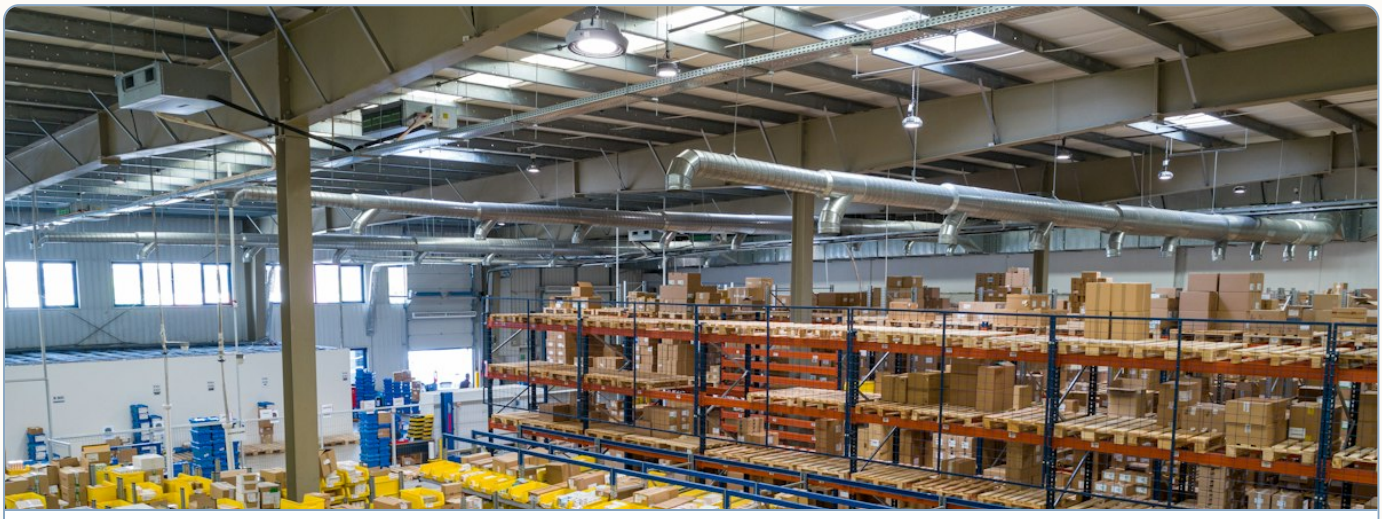

Try
Write your answers on the lines.

Check
Mark it with the answers at the back.

Remember
Learn the Golden Rule by heart.

NUMBER • STANDARD N1

1 Place Value, Ordering & Large Numbers

Workplace application of Place Value, Ordering & Large Numbers.

★ Core Formula & Statutory Method

In large numbers up to 1,000,000, each digit column represents a power of ten. Use commas or spaces between thousands.

Separate digits into groups of three from the right: Millions, Thousands, Units.

✎ Official Worked Solution

A warehouse records 425,800 units in Q1 and 389,950 units in Q2. How many more in Q1?

1. Align columns: 425,800 - 389,950
2. Perform column subtraction with borrowing
3. Difference = **35,850 units**

✓ Examiner Golden Rule

Always align digits by their place value, never by the leftmost digit.

! Watch Out!

Don't confuse hundred thousands with millions.

TOPIC 1 • CANDIDATE WORKSPACE

P

Place Value, Ordering & Large Numbers: Practice Drills

1 **Question 1 (Foundation):** Write in figures: 'Six hundred and forty-two thousand, and eighty-five'. Then order these populations from smallest to largest: 485,200; 458,900; 485,090; 502,100. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A regional distribution hub processed 425,800 parcels in Q1 and 389,950 parcels in Q2. How many more parcels were processed in Q1 than in Q2? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A council has an annual housing budget of £1,250,000. It spends £485,600 on roof repairs, £392,450 on heating upgrades, and £184,200 on external insulation. How much budget remains unspent? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N2

2 Negative Numbers & Financial Balances

Workplace application of Negative Numbers & Financial Balances.

★ Core Formula & Statutory Method

Negative numbers represent values below zero (bank overdrafts, temperatures, sea level). Adding a negative is subtraction.

Positive + Positive = Positive. Positive + Negative = Subtract smaller from larger.

✎ Official Worked Solution

A business account is at -£1,450. A client pays £3,200, then bills of £850 and £1,120 are debited.

1. Start: -£1,450 + £3,200 = +£1,750
2. Deduct bills: £1,750 - £850 = £900
3. Deduct staff: £900 - £1,120 = **-£220** (Overdraft)

✓ Examiner Golden Rule

Moving right on the number line increases value; moving left decreases value.

! Watch Out!

Subtracting a negative becomes an addition: 5 - (-3) = 8.

TOPIC 2 • CANDIDATE WORKSPACE

P Negative Numbers & Financial Balances: Practice Drills

1 **Question 1 (Foundation):** Order these values from coldest to warmest: -12°C, +3°C, -4.5°C, -0.5°C, +1.8°C, -15°C. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A warehouse chiller is set at +3°C. A fault causes the temperature to drop by 8.5°C. What is the new temperature? If the safety alarm triggers at -5°C, does the alarm sound? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A small business starts Monday with a bank balance of -£640. Over the week: sales revenue of +£2,850 is paid in, direct debits of £1,420 and £980 clear, and a supplier refund of £195 arrives. What is the Friday closing balance? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N3

3 Fraction Operations & Mixed Numbers

Workplace application of Fraction Operations & Mixed Numbers.

★ Core Formula & Statutory Method

Fractions represent equal parts of a whole. To add or subtract, you MUST find a common denominator.

Multiply fractions: multiply numerators together, then denominators together. Divide: flip second fraction and multiply.

✎ Official Worked Solution

Calculate 2 1/4 + 1 2/3 for a catering recipe calculation.

1. Convert to improper: 9/4 + 5/3
2. Common denominator 12: 27/12 + 20/12 = 47/12
3. Convert to mixed: **3 11/12**

✓ Examiner Golden Rule

Always convert mixed numbers to improper fractions before multiplying or dividing.

! Watch Out!

Never add denominators together: 1/2 + 1/2 is not 2/4!

TOPIC 3 • CANDIDATE WORKSPACE

P

Fraction Operations & Mixed Numbers: Practice Drills

1 **Question 1 (Foundation):** Evaluate giving your answers in simplest form: a) 5/8 + 1/6 b) 2 2/3 × 3/4. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A chef has 4 1/2 kg of prime beef mince. Each burger patty requires 3/16 kg of mince. How many complete burger patties can the chef make? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** In a manufacturing plant, 3/5 of workers are on day shift, 1/4 are on late shift, and the remaining 45 workers are on night shift. How many total workers are employed at the plant? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N4

4 Percentages of Amounts & Multipliers

Workplace application of Percentages of Amounts & Multipliers.

Core Formula & Statutory Method

Percent means 'out of 100'. Use single-step decimal multipliers to calculate percentage changes efficiently.

Percentage increase: Multiplier = 1 + (percentage / 100). Decrease: Multiplier = 1 - (percentage / 100).

Official Worked Solution

An operative earns £24,500. They receive a 4.5% cost of living pay rise. What is the new salary?

1. Multiplier for 4.5% increase = 1.045
2. Calculation: £24,500 x 1.045
3. New salary = **£25,602.50**

Examiner Golden Rule

Use decimal multipliers for calculator questions to save time and reduce errors.

Watch Out!

Check if question asks for the INCREASE or the FINAL TOTAL.

TOPIC 4 • CANDIDATE WORKSPACE

P

Percentages of Amounts & Multipliers: Practice Drills

1 **Question 1 (Foundation):** Write the single decimal multiplier for: **(2 marks)**
a) Finding 6.5% b) Increasing by 12% c) Decreasing by 35% d) Decreasing by 4%.

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A car insurance premium of £620.00 increases by 8.5% at renewal. What is the new renewal price? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A distribution depot ships 14,500 parcels in November. In December, parcel volume increases by 28%. In January, volume drops by 15% compared to December. How many parcels are shipped in January? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N5

5 Reverse Percentages & Original Value

Workplace application of Reverse Percentages & Original Value.

★ Core Formula & Statutory Method

Reverse percentage problems give you the value AFTER an increase or decrease and ask for the ORIGINAL value.

Original Value = Final Value / Multiplier. NEVER just calculate the percentage of the final value!

✎ Official Worked Solution

A laptop is on sale for £468 after a 20% discount. What was the original price before the sale?

1. After 20% off, £468 represents 80% of original price (0.80 multiplier)
2. Calculation: £468 / 0.80
3. Original price = **£585.00**

✓ Examiner Golden Rule

Always divide by the percentage multiplier to work backwards to the original 100%.

! Watch Out!

Do NOT add 20% of £468 (£93.60) — that gives the wrong answer (£561.60).

TOPIC 5 • CANDIDATE WORKSPACE

P

Reverse Percentages & Original Value: Practice Drills

1 **Question 1 (Foundation):** A power drill sells for £84.00 including 20% VAT. Calculate the price before VAT was added. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A bakery sold 450 loaves on Friday and 558 loaves on Saturday. Calculate the percentage increase in sales. **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A fitness coach bought commercial gym equipment for £3,200. Three years later, he sells it for £1,840. Calculate the percentage loss in value. If a new model is currently advertised at £2,760 after a 15% discount, what was its original price? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N6

6 Compound Interest & Depreciation

Workplace application of Compound Interest & Depreciation.

★ Core Formula & Statutory Method

Compound interest applies interest to both the initial principal and the accumulated interest from previous periods.

Final Amount = Principal x (1 + r)^n, where r is decimal interest rate and n is number of years.

✎ Official Worked Solution

An NHS worker invests £5,000 in a savings bond paying 3.2% compound interest per year for 3 years.

1. Multiplier = 1.032
2. Formula: £5,000 x (1.032)^3
3. £5,000 x 1.09911 = **£5,495.55**

✓ Examiner Golden Rule

Apply the multiplier repeatedly or use the power key (x^y) on your scientific calculator.

! Watch Out!

Simple interest gives less than compound interest over multiple years.

TOPIC 6 • CANDIDATE WORKSPACE

P

Compound Interest & Depreciation: Practice Drills

1 **Question 1 (Foundation):** Calculate the value of £2,400 invested for 2 years at 3% compound interest per annum. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A commercial delivery van was purchased brand new for £28,000. It depreciates at a rate of 18% per year. What is its estimated book value after 3 years? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** An investor has £10,000 to invest for 3 years. Bank A offers 4.5% simple interest per year. Bank B offers 4.2% compound interest per annum. Which bank will yield more total interest at the end of 3 years, and by how much? **(4 marks)**

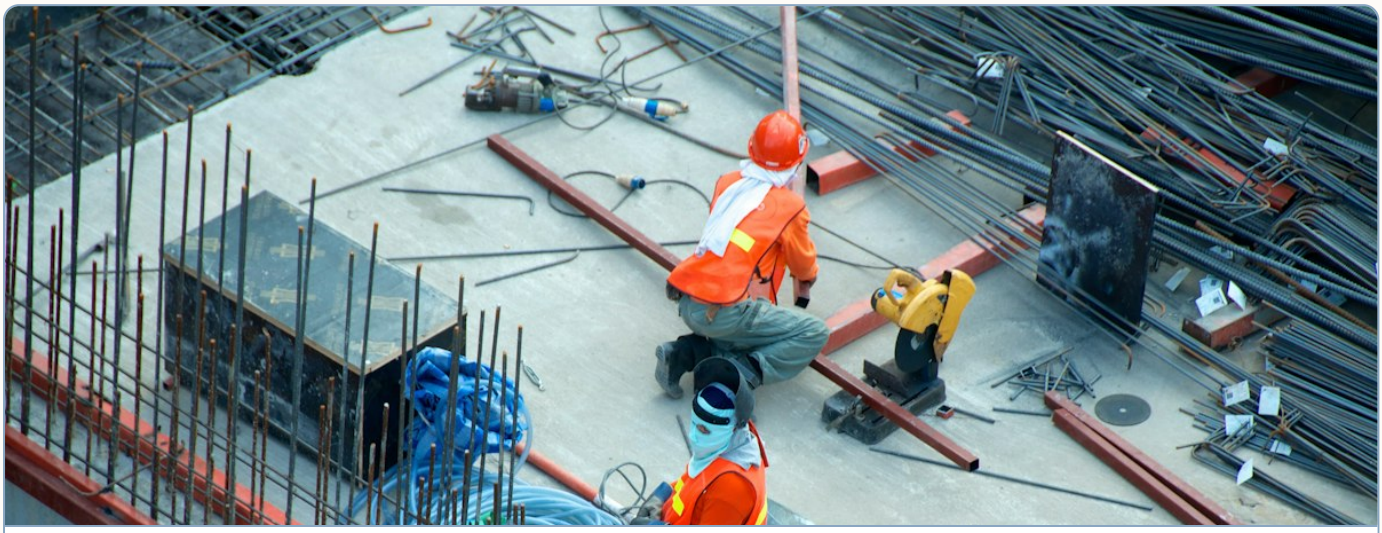

Show your working

Answer: _____

7

NUMBER • STANDARD N7

Ratio Division in 2 & 3 Parts

Workplace application of Ratio Division in 2 & 3 Parts.

★ Core Formula & Statutory Method

Ratios show relative sizes of quantities. To divide into a ratio, find the value of one part.

Step 1: Add ratio parts. Step 2: Total amount / Total parts = 1 part. Step 3: Multiply by each ratio part.

✎ Official Worked Solution

Concrete is mixed in the ratio cement : sand : gravel = 1 : 2 : 4. How much sand is needed for 840 kg of mix?

1. Total parts: 1 + 2 + 4 = 7 parts
2. Value of 1 part: 840 kg / 7 = 120 kg
3. Sand (2 parts): 2 x 120 kg = **240 kg**

✓ Examiner Golden Rule

Always check your answers sum back to the original total (120 + 240 + 480 = 840).

! Watch Out!

Read the order of terms carefully: cement : sand : gravel.

TOPIC 7 • CANDIDATE WORKSPACE

P

Ratio Division in 2 & 3 Parts: Practice Drills

1 **Question 1 (Foundation):** Share £4,500 in the ratio 5 : 3 : 1. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A mortar mix uses cement, sand, and gravel in the ratio 1 : 2 : 4. A builder needs 1.4 tonnes of mortar. How many kilograms of sand does he require? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** Supermarket A sells a 750 g box of cereal for £2.85. Supermarket B sells a 1.2 kg family pack for £4.32. Which pack offers better value for money? Justify your decision with full unit calculations. **(4 marks)**

Show your working

Answer: _____

8

NUMBER • STANDARD N8

Direct & Inverse Proportion

Workplace application of Direct & Inverse Proportion.

Core Formula & Statutory Method

Direct proportion: as one increases, the other increases at the same rate. Inverse: as one increases, the other decreases.

Direct: find unitary value (value for 1) then multiply. Inverse: Total work = workers x days = constant.

Official Worked Solution

It takes 4 decorators 6 days to paint an office block. How long would it take 3 decorators?

1. Total work required = 4 decorators x 6 days = 24 worker-days
2. Time for 3 decorators = 24 worker-days / 3 decorators
3. Total time = **8 days**

Examiner Golden Rule

More workers means FEWER days: inverse proportion always multiplies to a constant product.

Watch Out!

Direct proportion problems maintain a constant ratio (division).

TOPIC 8 • CANDIDATE WORKSPACE

P Direct & Inverse Proportion: Practice Drills

1 **Question 1 (Foundation):** It takes 5 cleaners 4 hours to clean an office floor. How long would it take 8 cleaners working at the exact same rate? **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A pipe delivers 45 litres/minute and fills a water storage tank in 80 minutes. How long would it take to fill the tank if the flow rate was reduced to 30 litres/minute? **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A groundworks contractor estimates that 3 excavators can clear a development site in 16 working days. The client requests the work be completed in 6 working days. How many additional excavators must the contractor hire? **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N9

9 Decimals & Money Calculations

Workplace application of Decimals & Money Calculations.

★ Core Formula & Statutory Method

Decimals represent tenths, hundredths, and thousandths. Money is always rounded to 2 decimal places (£0.00).

Align decimal points vertically for addition and subtraction. For multiplication, count total decimal places.

✎ Official Worked Solution

An operative buys 14.5 metres of cabling at £2.64 per metre plus VAT at 20%.

1. Cable cost: 14.5 x £2.64 = £38.28
2. Add 20% VAT: £38.28 x 1.20 = £45.936
3. Rounded to 2 decimal places = **£45.94**

✓ Examiner Golden Rule

Always include two decimal places for currency answers (write £45.90, not £45.9).

! Watch Out!

Round down only at the very final step of your multi-step calculation.

TOPIC 9 • CANDIDATE WORKSPACE

P Decimals & Money Calculations: Practice Drills

1 **Question 1 (Foundation):** Evaluate without a calculator: a) 4.85 × 100 b) 73.6 ÷ 1000 c) 14.6 - 8.79. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A dental receptionist checks three utility payments: electricity £184.25, gas £112.80, and water £46.45. If the practice had budgeted £350.00, by how much did they overspend or underspend? **(3 marks)**

Show your working

Answer: _____

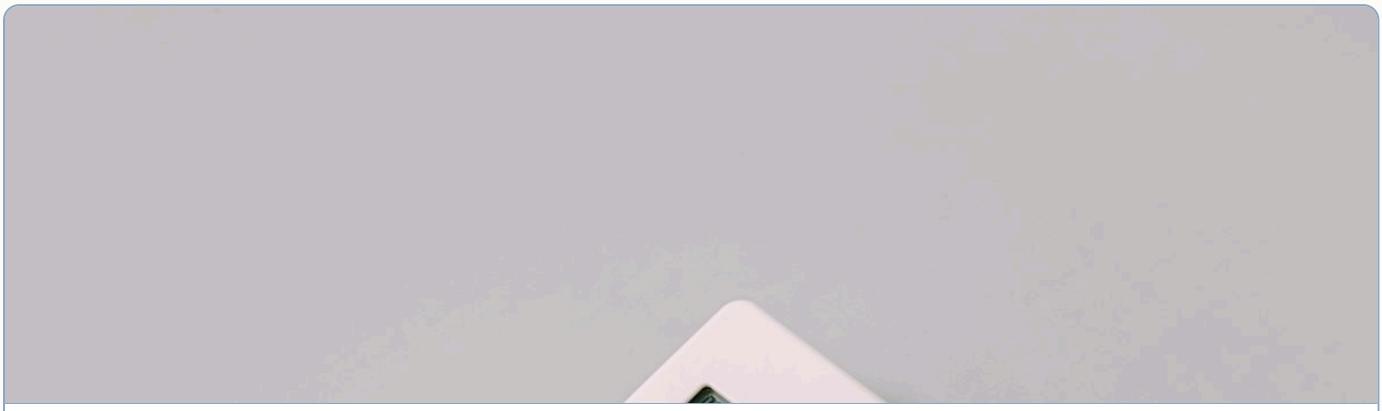

3 **Question 3 (Exam Challenge):** An electrician quotes a client: 6 light fittings at £24.50 each, 45 m cable at £1.20/m, and 3.5 hours labour at £35/hr. The electrician offers a 10% prompt-payment discount on the total before VAT, and then adds 20% VAT. Calculate the final bill. **(4 marks)**

Show your working

Answer: _____

NUMBER • STANDARD N10

10 Order of Operations (BIDMAS)

Workplace application of Order of Operations (BIDMAS).

Core Formula & Statutory Method

Calculations must follow the statutory mathematical order: Brackets, Indices, Division/Multiplication, Addition/Subtraction.

Work inside brackets first, then evaluate powers/roots, then left-to-right for division/multiplication.

Official Worked Solution

Evaluate the formula for monthly mortgage repayment factor: (180 - 4 x 5^2) / 2.

1. Indices first: 5^2 = 25
2. Multiplication: 4 x 25 = 100
3. Brackets: 180 - 100 = 80
4. Division: 80 / 2 = **40**

Examiner Golden Rule

Calculators without bracket keys do operations from left to right; enter BIDMAS steps manually.

Watch Out!

Division and multiplication have equal priority — execute left to right.

TOPIC 10 • CANDIDATE WORKSPACE

P Order of Operations (BIDMAS): Practice Drills

1 **Question 1 (Foundation):** Evaluate without a calculator: a) 15 - 3 × 4 + 2 b) (8 + 4) ÷ (7 - 3) + 3^2. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** Engineer's braking distance formula: $d = 0.05v^2 + 0.4v$, where v is speed in mph. Calculate the stopping distance d when v = 40 mph. **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** Total hire charge C (in £) for an industrial generator is given by C = 1.20 × (65 + 35d - 20), where d is the number of days hired. Calculate C for an 8-day hire. **(4 marks)**

Show your working

Answer: _____

11

NUMBER • STANDARD N11

Estimation & Approximation

Workplace application of Estimation & Approximation.

★ Core Formula & Statutory Method

Estimation involves rounding every number in a calculation to 1 significant figure to check plausibility.

Round each number to 1 significant figure BEFORE performing any calculation.

✎ Official Worked Solution

Estimate the cost of 48.7 hours of plant machinery hire at £31.25 per hour.

1. Round 48.7 to 1 sig fig = 50
2. Round £31.25 to 1 sig fig = £30
3. Estimated calculation = 50 x £30 = **£1,500**

✓ Examiner Golden Rule

Do not calculate the exact answer and then round it — examiners award marks for pre-rounding.

! Watch Out!

Estimation is an essential checking method required in Section A exam tasks.

P

TOPIC 11 • CANDIDATE WORKSPACE

Estimation & Approximation: Practice Drills

1 **Question 1 (Foundation):** Round each number to 1 significant figure to estimate: a) 48.7 × 31.2 b) 812 ÷ 19.6. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A warehouse manager orders 195 heavy-duty crates at £48.75 each. Use 1 significant figure estimation to find an approximate total cost, and state whether it is an overestimate or underestimate. **(3 marks)**

Show your working

Answer: _____

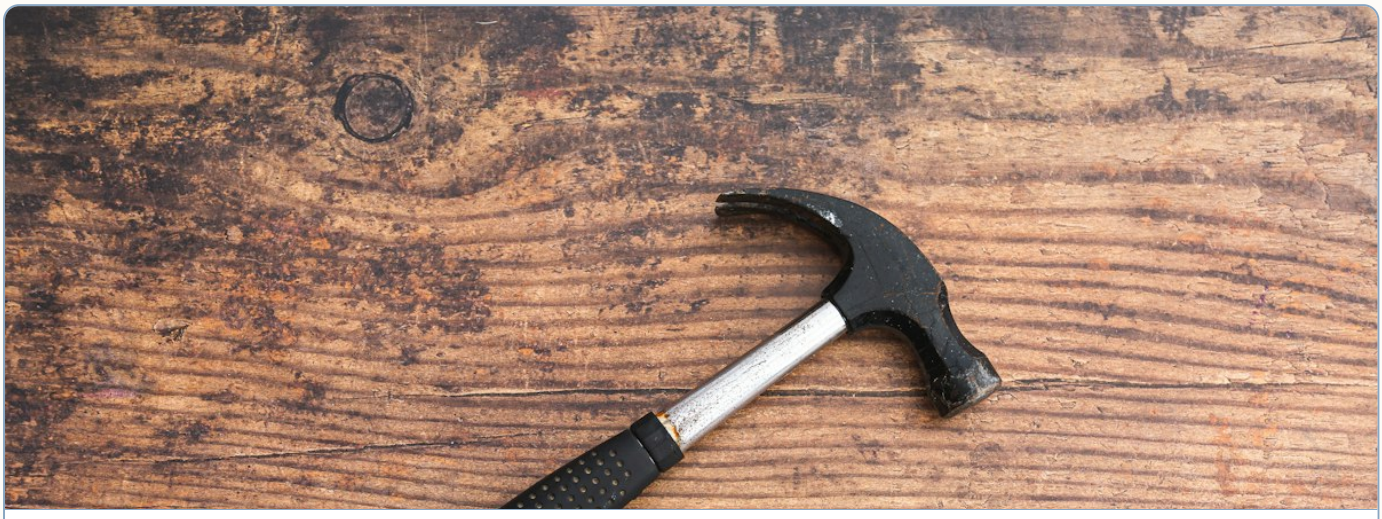

3 **Question 3 (Exam Challenge):** A parcel courier measures a crate as 60 cm by 40 cm by 30 cm, each rounded to the nearest 10 cm. Calculate the upper bound (maximum possible volume) of the crate in cm^3. **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M12

12 Metric & Imperial Conversions

Workplace application of Metric & Imperial Conversions.

★ Core Formula & Statutory Method

Functional skills requires converting between metric units (mm, cm, m, km; g, kg; ml, l) and key imperial benchmarks.

Key imperial equivalences: 1 inch = 2.54 cm; 1 foot = 30 cm; 1 kg = 2.2 lbs; 1 gallon = 4.5 litres; 5 miles = 8 km.

✎ Official Worked Solution

A patient weighs 14 stone 5 lbs in clinic. Convert this weight into kilograms.

1. Total pounds: (14 x 14) + 5 = 196 + 5 = 201 lbs
2. Convert lbs to kg: 201 / 2.2
3. Weight = **91.36 kg**

✓ Examiner Golden Rule

Check whether your conversion factor requires multiplying or dividing.

! Watch Out!

Remember: 1 stone = 14 pounds (lbs).

TOPIC 12 • CANDIDATE WORKSPACE

P Metric & Imperial Conversions: Practice Drills

1 **Question 1 (Foundation):** Convert: a) 3.45 kg into grams b) 750 ml into litres c) 140 miles into kilometres using 5 miles = 8 km. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A patient in hospital is prescribed liquid medication: 15 ml three times per day for 14 days. Will a 500 ml bottle be sufficient? Show full working. **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A UK haulage truck carries 14 tonnes of gravel. The European delivery limit is 31,000 lbs. Use 1 kg = 2.2 lbs to determine if the truck is within legal weight limits. **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M13

13 Compound Units: Speed, Density & Pressure

Workplace application of Compound Units: Speed, Density & Pressure.

★ Core Formula & Statutory Method

Speed is how fast something travels: Speed = Distance ÷ Time. Density = Mass ÷ Volume. Pressure = Force ÷ Area.

Speed formula triangle: Put Distance (D) at the top, Speed (S) and Time (T) at the bottom. Cover S to get D ÷ T. Cover D to get S × T. Cover T to get D ÷ S.

✎ Official Worked Solution

A delivery van travels 145 miles from Birmingham to London in 2 hours 45 minutes. Find average speed.

1. Convert 45 mins to decimal hours: 45 ÷ 60 = 0.75 hours
2. Total time = 2.75 hours
3. Speed = 145 ÷ 2.75 = **52.7 mph**

✓ Examiner Golden Rule

Always convert minutes to decimal hours by dividing by 60 (2 hours 45 mins is 2.75h, NOT 2.45h!).

! Watch Out!

Density is measured in g/cm³ or kg/m³.

TOPIC 13 • CANDIDATE WORKSPACE

P Compound Units: Speed, Density & Pressure: Practice Drills

1 **Question 1 (Foundation):** A brass casting has a volume of 250 cm³ and a mass of 2,125 g. Calculate the density of the brass in g/cm³. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A hydraulic piston exerts a force of 1,800 N on an area of 0.04 m². Calculate the pressure exerted in N/m². **(3 marks)**

Show your working

Answer: _____

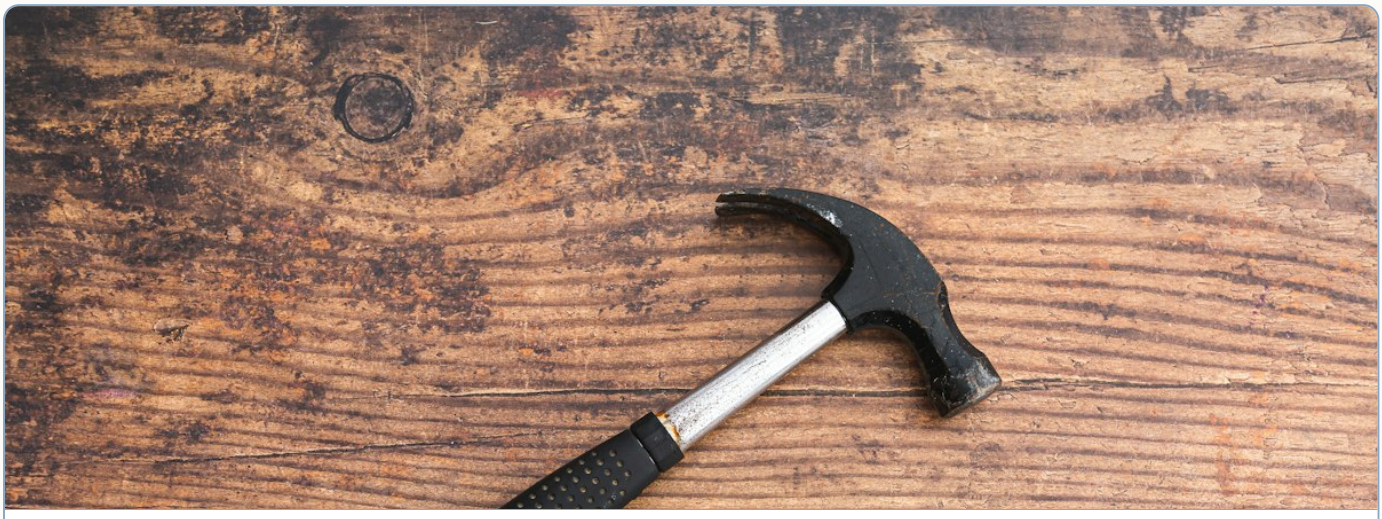

3 **Question 3 (Exam Challenge):** A sales rep travels from Leeds to Birmingham (115 miles). He departs at 07:45 and arrives at 10:09. Due to roadworks, he had to stop for a 15-minute coffee break. Calculate his average driving speed while moving. **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M14

14 Perimeter of Composite 2D Shapes

Workplace application of Perimeter of Composite 2D Shapes.

★ Core Formula & Statutory Method

Perimeter is the total boundary distance around the outside edge of a 2D shape.

Find all missing horizontal and vertical side lengths first, then sum all outer edges.

✎ Official Worked Solution

An L-shaped industrial yard has outer dimensions 18 m by 14 m with an inset section 7 m by 6 m.

1. Missing horizontal = 18 - 7 = 11 m
2. Missing vertical = 14 - 6 = 8 m
3. Perimeter = 18 + 14 + 7 + 6 + 11 + 8 = **64 m**

✓ Examiner Golden Rule

Do not include interior dashed boundary lines in perimeter totals.

! Watch Out!

Tick off each side as you sum it to avoid missing any edge.

TOPIC 14 • CANDIDATE WORKSPACE

P Perimeter of Composite 2D Shapes: Practice Drills

1 **Question 1 (Foundation):** An L-shaped office has overall length 12 m and overall width 9 m. Find the total perimeter of the room. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A rectangular warehouse yard measures 28 m by 18 m, with a 4 m wide vehicle entrance gate where no fencing is required. Security fencing costs £32.50 per metre. Calculate the cost of the fencing. **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A T-shaped exhibition stand has a top bar of 10 m by 3 m and a central stem of 4 m wide by 6 m long. Aluminium edging strip is sold in 2.5 m lengths at £14.00 per length. How many lengths are needed for the full outer perimeter, and what is the total cost? **(4 marks)**

Show your working

Answer: _____

15

MEASURE • STANDARD M15

Circumference of Circles

Workplace application of Circumference of Circles.

★ Core Formula & Statutory Method

Circumference is the distance around the outside edge of a circle: Circumference = 3.142 × diameter.

If you are given the radius, double it first to get the diameter: diameter = 2 × radius.

✎ Official Worked Solution

A circular roundabout has a diameter of 24 metres. Calculate its outer circumference.

1. Formula: Circumference = 3.142 × diameter
2. Calculation: 3.142 × 24 m
3. Circumference = **75.41 metres**

✓ Examiner Golden Rule

For a semi-circle perimeter: calculate (3.142 × diameter ÷ 2) + diameter (don't forget to add the flat straight edge!).

! Watch Out!

Remember: Circumference = 3.142 × diameter.

TOPIC 15 • CANDIDATE WORKSPACE

P

Circumference of Circles: Practice Drills

1 **Question 1 (Foundation):** Calculate the circumference of a circular water tank with a radius of 4.5 metres. (Use π = 3.14) **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A running track consists of a rectangle measuring 100 m by 64 m with two semicircular ends. Calculate the total running distance around the outer edge of one complete lap. **(3 marks)**

Show your working

Answer: _____

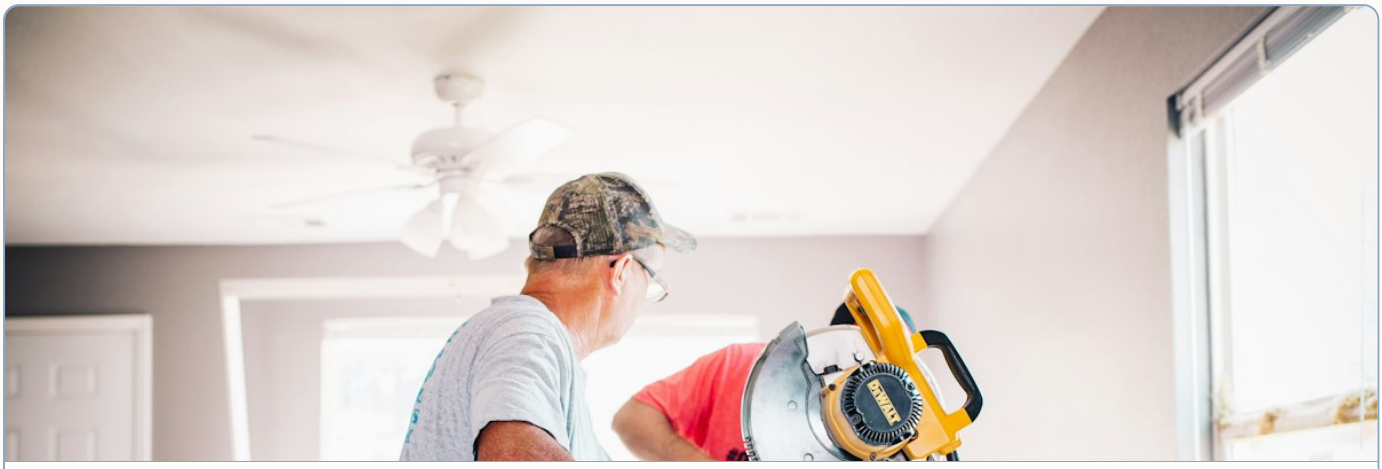

3 **Question 3 (Exam Challenge):** A decorative wrought-iron garden gate has a rectangular base (1.2 m wide by 1.8 m high) topped with a semicircular arch. What total length of iron framing is needed for the perimeter? (Use π = 3.142) **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M16

16 Area of Rectangles, Triangles & Parallelograms

Workplace application of Area of Rectangles, Triangles & Parallelograms.

★ Core Formula & Statutory Method

Area is the flat surface space inside a 2D shape, measured in square units (cm², m²).

Rectangle = length × width. Triangle = (base × height) ÷ 2. Parallelogram = base × height.

✎ Official Worked Solution

A triangular warehouse roof gable has a base of 8.4 m and perpendicular vertical height of 3.5 m.

1. Formula: Triangle Area = (base × height) ÷ 2
2. Calculation: (8.4 × 3.5) ÷ 2 = 29.4 ÷ 2
3. Area = **14.7 m²**

✓ Examiner Golden Rule

Always use the upright vertical height at 90°, NEVER the slanted sloping side!

! Watch Out!

For triangles, always divide by 2 at the end.

TOPIC 16 • CANDIDATE WORKSPACE

P Area of Rectangles, Triangles & Parallelograms: Practice Drills

1 **Question 1 (Foundation):** Calculate the area of: a) A triangle with base 14 cm and perpendicular height 9 cm b) A parallelogram with base 8.5 m and perpendicular height 4.0 m. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A rectangular gable wall is 8 m wide and 5 m high, topped by a triangular roof section of base 8 m and vertical height 2.5 m. Calculate the total exterior wall area to be rendered. **(3 marks)**

Show your working

Answer: _____

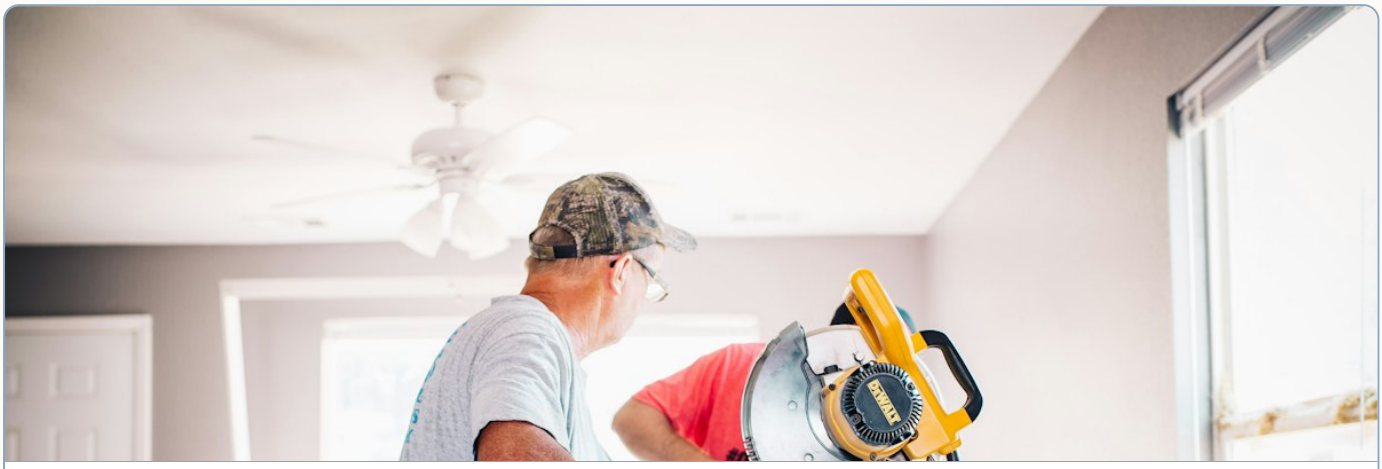

3 **Question 3 (Exam Challenge):** A rectangular hallway measures 12 m by 3.5 m. Square ceramic floor tiles measure 50 cm by 50 cm and are sold in boxes of 8 tiles for £22.00 per box. Adding 10% extra tiles for cutting wastage, calculate the total cost of the boxes required. **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M17

17 Area of Trapeziums & Composite Shapes

Workplace application of Area of Trapeziums & Composite Shapes.

★ Core Formula & Statutory Method

Trapezium area = ((a + b) ÷ 2) × h, where a and b are the parallel sides and h is the upright height.

Split complex composite shapes into separate rectangles and triangles, find each area, then add together.

✎ Official Worked Solution

A car park space is a trapezium with parallel sides 4.5 m and 6.5 m and perpendicular width 2.8 m.

1. Sum of parallel sides: 4.5 + 6.5 = 11.0 m
2. Average: 11.0 ÷ 2 = 5.5 m
3. Area: 5.5 × 2.8 = **15.4 m²**

✓ Examiner Golden Rule

Add the two parallel edges first, divide by 2, then multiply by the perpendicular distance.

! Watch Out!

For L-shapes, draw a dashed line and label sections 'Shape A' and 'Shape B'.

TOPIC 17 • CANDIDATE WORKSPACE

P Area of Trapeziums & Composite Shapes: Practice Drills

1 **Question 1 (Foundation):** Calculate the area of a circular patio with a diameter of 6 metres. Give your answer to 2 decimal places. (Use π = 3.142) **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A flat roof in the shape of a trapezium has parallel sides of 7.2 m and 11.8 m, and a perpendicular width of 5.0 m. Roofing felt costs £8.50 per square metre. Calculate the cost to felt the roof. **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A sports hall floor has an L-shaped layout: 14 m overall length by 10 m overall width. A cutout corner measures 6 m by 4 m. A tin of floor varnish covers 25 m² and costs £34.99. How many tins must be bought, and what is the total cost? **(4 marks)**

Show your working

Answer: _____

18

MEASURE • STANDARD M18

Area of Circles & Semicircles

Workplace application of Area of Circles & Semicircles.

★ Core Formula & Statutory Method

Area of a circle: Circle Area = π r^2 = 3.142 × r^2 (where the ² symbol means squared: r^2 = radius × radius). Multiply the radius by itself (r^2) first, then multiply by 3.142.

If you are given the diameter, halve it first to get the radius: radius = diameter ÷ 2. Semicircle area = (π r^2) ÷ 2 = (3.142 × r^2) ÷ 2.

✎ Official Worked Solution

A circular patio has a diameter of 7.2 metres. Calculate its total paved surface area.

1. Halve diameter to get radius: 7.2 ÷ 2 = 3.6 m
2. Square radius (r^2 = r × r): 3.6^2 = 3.6 × 3.6 = 12.96
3. Area: π r^2 = 3.142 × 12.96 = **40.72 m^2**

✓ Examiner Golden Rule

Always square the radius (r^2 = radius × radius) before multiplying by 3.142.

! Watch Out!

Do NOT use diameter in the area calculation — always halve to radius first!

TOPIC 18 • CANDIDATE WORKSPACE

P Area of Circles & Semicircles: Practice Drills

1 **Question 1 (Foundation):** Calculate the area of a circular patio with a diameter of 6 metres. Give your answer to 2 decimal places. (Use π = 3.142) **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A semicircular lawn has a straight diameter edge of 10 metres. Lawn turf costs £5.80 per m². Calculate the cost to turf the semicircular lawn. (Use π = 3.142) **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A rectangular park area measuring 20 m by 14 m contains a circular ornamental pond of radius 4 m. The area outside the pond is covered in gravel at 40 kg per m². How many 800 kg bulk bags of gravel must be ordered? (Use π = 3.142) **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M19

19 Surface Area of 3D Prisms & Cylinders

Workplace application of Surface Area of 3D Prisms & Cylinders.

★ Core Formula & Statutory Method

Total surface area is the sum of the areas of all external faces of a 3D solid.

Cuboid: $2(lw + lh + wh)$. Cylinder: $2\pi r^2 + \pi dh = (2 \times 3.142 \times r^2) + (3.142 \times d \times h)$, where r^2 means r × r [two circular ends + curved rectangle].

✎ Official Worked Solution

A cylindrical storage water tank has radius 1.5 m and height 4 m. Calculate total surface area.

1. Two circular ends: $2 \times \pi\ r^2 = 2 \times 3.142 \times 1.5^2 = 2 \times 3.142 \times 2.25 = 14.14\ m^2$
2. Curved side: $\pi \times d \times h = 3.142 \times 3 \times 4 = 37.70\ m^2$
3. Total surface area = 14.14 + 37.70 = **51.84 m²**

✓ Examiner Golden Rule

The ² symbol means squared ($r^2 = r \times r$). Check if a cylinder is OPEN at one or both ends!

! Watch Out!

Surface area is measured in m^2; volume is measured in m^3.

TOPIC 19 • CANDIDATE WORKSPACE

P

Surface Area of 3D Prisms & Cylinders: Practice Drills

1 **Question 1 (Foundation):** Calculate the total surface area of a cuboid measuring 12 cm long, 8 cm wide, and 5 cm high. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A triangular prism has identical right-angled triangular ends with base 6 cm, height 8 cm, and hypotenuse 10 cm. The prism is 15 cm long. Calculate its total surface area. **(3 marks)**

Show your working

Answer: _____

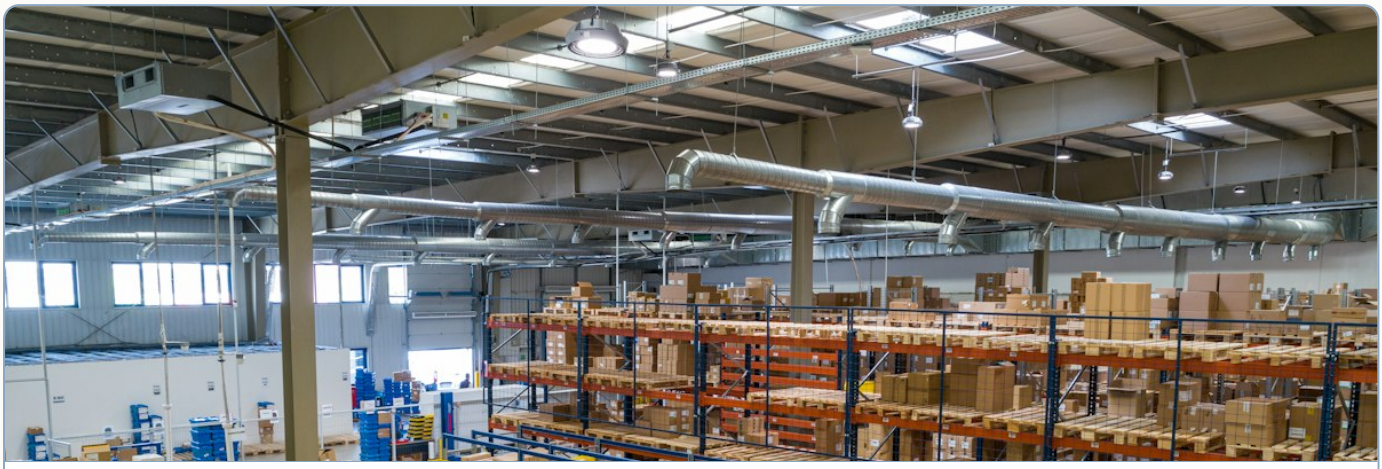

3 **Question 3 (Exam Challenge):** A manufacturer designs an open-topped cylindrical metal bin with diameter 40 cm and height 75 cm. The exterior of the base and curved side is powder-coated. What surface area in square metres must be coated? (Use π = 3.142) **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M20

20 Volume of Cuboids, Prisms & Cylinders

Workplace application of Volume of Cuboids, Prisms & Cylinders.

★ Core Formula & Statutory Method

Volume is the 3D space inside a solid: Volume = Cross-Sectional Area x Length. Units are cubic (^{3}, where $x^3 = x \times x \times x$).

Cuboid = l × w × h. Triangular prism = 1/2 × b × h × length. Cylinder = $\pi r^2 h$ = 3.142 × r^2 × h (where $r^2 = r \times r$).

✎ Official Worked Solution

A swimming pool is 25 m long, 10 m wide, with an average depth of 1.8 m. Calculate water volume.

1. Volume of cuboid = 25 x 10 x 1.8
2. Calculation = 250 x 1.8 = 450 m^3
3. Convert to litres (1 m^3 = 1,000 litres): **450,000 litres**

✓ Examiner Golden Rule

Prism volume rule: Find the front face area first, then multiply by the 3D depth/length.

! Watch Out!

Remember: 1 cm^3 = 1 ml, 1,000 cm^3 = 1 litre, 1 m^3 = 1,000 litres.

TOPIC 20 • CANDIDATE WORKSPACE

P Volume of Cuboids, Prisms & Cylinders: Practice Drills

1 **Question 1 (Foundation):** Calculate the volume of a triangular prism where the cross-sectional triangle has base 8 cm and height 5 cm, and the length is 22 cm. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A cylindrical oil barrel has a diameter of 60 cm and a height of 90 cm. Calculate its capacity in litres to 1 decimal place. (Use π = 3.14) **(3 marks)**

Show your working

Answer: _____

3 **Question 3 (Exam Challenge):** A swimming pool measures 12 m long and 6 m wide. The shallow end is 1.0 m deep and slopes uniformly to 2.2 m at the deep end. Calculate the total volume of water in the pool in cubic metres and litres. **(4 marks)**

Show your working

Answer: _____

MEASURE • STANDARD M21

21 Scale Drawings, Maps & Bearings

Workplace application of Scale Drawings, Maps & Bearings.

★ Core Formula & Statutory Method

Scale drawings represent real-world distances proportionally. Bearings are 3-digit angles measured clockwise from North.

Three rules for bearings: 1. Measure from North. 2. Measure clockwise. 3. Always write with 3 digits (e.g., 045°).

✎ Official Worked Solution

A map has a scale of 1 : 25,000. Two villages are 6.4 cm apart on the map. Find real distance in km.

1. Real distance in cm: 6.4 x 25,000 = 160,000 cm
2. Convert to metres: 160,000 / 100 = 1,600 m
3. Convert to kilometres: 1,600 / 1,000 = **1.6 km**

✓ Examiner Golden Rule

Always write bearings with 3 digits: write 065°, never just 65°.

! Watch Out!

Scale 1 : 50 means 1 cm on paper represents 50 cm in real life.

TOPIC 21 • CANDIDATE WORKSPACE

P Scale Drawings, Maps & Bearings: Practice Drills

1 **Question 1 (Foundation):** A scale drawing uses the scale 1 : 20. A doorway is 90 cm wide in reality. What is its width on the drawing in centimetres? **(2 marks)**

Answer: _____

3 **Question 3 (Exam Challenge):** A site surveyor creates a site plan using a scale of 1 : 200. On the plan, a rectangular warehouse boundary measures 18.5 cm by 12.0 cm. Calculate the real perimeter of the boundary in metres, and its real ground area in square metres. **(4 marks)**

Show your working

Answer: _____

22

DATA • STANDARD D22

Mean, Median, Mode & Range

Workplace application of Mean, Median, Mode & Range.

★ Core Formula & Statutory Method

Averages summarise a data set: Mean = Total / Count; Median = middle number; Mode = most frequent; Range = spread.

Order data from smallest to largest BEFORE finding the median. If even number of values, average the middle two.

✎ Official Worked Solution

Seven delivery drivers log their daily deliveries: 18, 24, 21, 19, 32, 21, 26. Find mean and median.

1. Mean: (18+24+21+19+32+21+26) / 7 = 161 / 7 = **23 deliveries**
2. Ordered: 18, 19, 21, **21**, 24, 26, 32
3. Median = **21**, Mode = **21**, Range = 32 - 18 = **14**

✓ Examiner Golden Rule

Range is a measure of SPREAD/CONSISTENCY, NOT an average. A smaller range means more consistent.

! Watch Out!

Outliers (extreme high/low values) distort the mean, but not the median.

TOPIC 22 • CANDIDATE WORKSPACE

P

Mean, Median, Mode & Range: Practice Drills

1 **Question 1 (Foundation):** Calculate the mean, median, mode, and range for: 6, 9, 14, 8, 12, 9, 15, 7. **(2 marks)**

Show your working

Answer: _____

2 **Question 2 (Workplace Problem):** A sales representative has a mean monthly sales figure of £18,500 across 5 months. In the 6th month, she sells £24,500. Calculate her new 6-month mean. **(3 marks)**

Show your working

Answer: _____

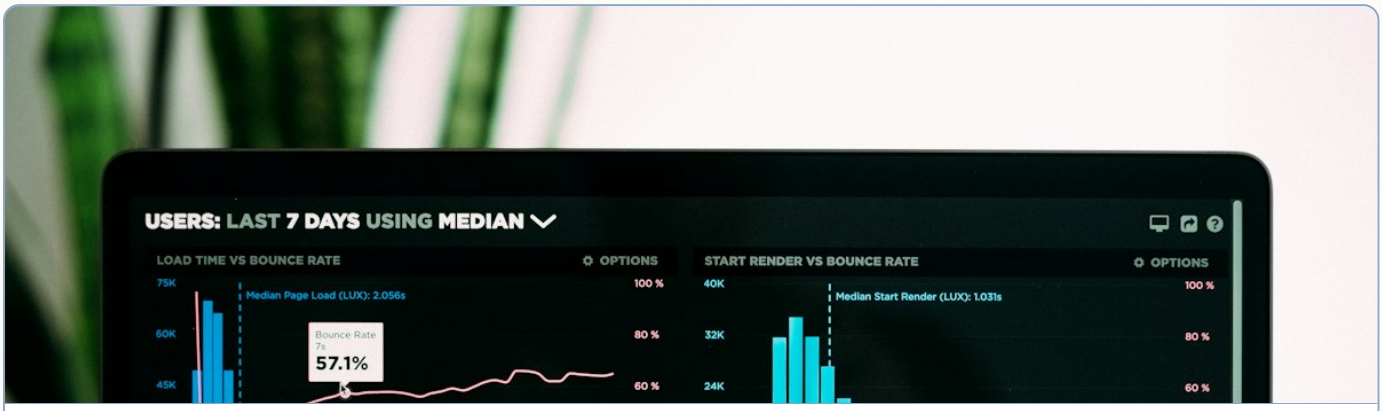

3 **Question 3 (Exam Challenge):** Two delivery depots recorded delivery delays (minutes) over 7 days. Depot North: 12, 15, 10, 8, 14, 11, 13. Depot South: 4, 25, 2, 30, 5, 28, 3. Calculate the mean and range for both depots, and write two comparison statements to advise the operations director. **(4 marks)**

Show your working

Answer: _____

DATA • STANDARD D23

23 Grouped Frequency Tables & Estimated Mean

Workplace application of Grouped Frequency Tables & Estimated Mean.

Core Formula & Statutory Method

When continuous data is grouped into classes, calculate the midpoints to estimate the mean value.

Step 1: Find midpoint of each class. Step 2: Multiply midpoint x frequency (f x x). Step 3: Sum(f x x) / Sum(f).

Official Worked Solution

Hospital waiting times: 0-10 mins (f=12), 10-20 mins (f=24), 20-30 mins (f=14). Estimate the mean wait time.

1. Midpoints: 5, 15, 25
2. f x x: (12 x 5) + (24 x 15) + (14 x 25) = 60 + 360 + 350 = 770
3. Sum of frequencies: 12 + 24 + 14 = 50
4. Estimated mean: 770 / 50 = **15.4 minutes**

Examiner Golden Rule

Always divide by total frequency (number of patients/items), NEVER by the number of rows!

Watch Out!

It is an ESTIMATED mean because the exact individual raw values inside each group are unknown.

TOPIC 23 • CANDIDATE WORKSPACE

P Grouped Frequency Tables & Estimated Mean: Practice Drills

1 **Question 1 (Foundation):** A survey recorded distance travelled to work: 0-5 km (12 people), 5-10 km (20 people), 10-15 km (8 people). Calculate the estimated mean distance. **(2 marks)**

Show your working

Calculate the estimated mean weight of a package and explain why this value is an estimate rather than an exact average. **(4 marks)**

Show your working

Answer: _____

24

DATA • STANDARD D24

Scatter Graphs & Correlation

Workplace application of Scatter Graphs & Correlation.

Core Formula & Statutory Method

Scatter graphs show the relationship between two variables. Correlation can be positive, negative, or zero.

Line of best fit: Draw a straight line through the balance of points, with equal points above and below.

Official Worked Solution

A garage plots vehicle age (years) against sale price (£). Points slope downwards from top-left to bottom-right.

1. Correlation: **Negative correlation** (as age increases, price decreases)
2. Use the line of best fit to predict the price of a 4-year-old vehicle
3. Read across from 4 on the horizontal axis to the line, then to the price axis

Examiner Golden Rule

Do not force your line of best fit through the origin (0, 0) unless the data requires it.

Watch Out!

Correlation does not prove causation: two variables may be linked by an external factor.

TOPIC 24 • CANDIDATE WORKSPACE

P

Scatter Graphs & Correlation: Practice Drills

1 **Question 1 (Foundation):** State the type of correlation you would expect between: a) Engine size and fuel consumption b) Daily rainfall and ice cream sales. **(2 marks)**

25

DATA • STANDARD D25

Two-Way Frequency Tables

Workplace application of Two-Way Frequency Tables.

Core Formula & Statutory Method

Two-way tables categorize data across two different variables. Every row total and column total must sum correctly.

Fill in missing cells by subtracting known values from row or column totals.

Official Worked Solution

A clinic records 120 patients: 70 females (45 vaccinated) and 50 males (25 vaccinated). Find unvaccinated males.

1. Unvaccinated males = Total males - Vaccinated males = 50 - 25 = **25**
2. Total vaccinated = 45 + 25 = 70
3. Total unvaccinated = 120 - 70 = 50 (25 female + 25 male)

Examiner Golden Rule

Check that the grand total in the bottom-right corner matches both row and column sums.

Watch Out!

Two-way tables are frequently paired with probability questions in Section B exams.

TOPIC 25 • CANDIDATE WORKSPACE

P Two-Way Frequency Tables: Practice Drills

1 **Question 1 (Foundation):** 80 candidates took a driving test: 45 were female. 26 females passed. 12 males failed. Complete a two-way frequency table showing gender and test result. **(2 marks)**

DATA • STANDARD D26

26 Pie Charts: Calculating Angles & Frequencies

Workplace application of Pie Charts: Calculating Angles & Frequencies.

Core Formula & Statutory Method

A full circle is 360°. Each category's sector angle represents its proportion of the total frequency.

Angle per item = 360° / Total frequency. Sector angle = Category frequency x Angle per item.

Official Worked Solution

A survey of 180 employees asks for their commute method: 72 drive, 54 train, 36 bus, 18 walk. Find angle for train.

1. Degrees per person: 360° / 180 = 2° per employee
2. Train sector angle: 54 x 2° = **108°**
3. Drive = 144°, Bus = 72°, Walk = 36° (Total: 144+108+72+36 = 360°)

Examiner Golden Rule

Always check all sector angles add up to exactly 360°.

Watch Out!

Use a protractor carefully from the center point and align the baseline with 0°.

TOPIC 26 • CANDIDATE WORKSPACE

P

Pie Charts: Calculating Angles & Frequencies: Practice Drills

Answer: _____

DATA • STANDARD D27

27 Single & Combined Event Probability

Workplace application of Single & Combined Event Probability.

★ Core Formula & Statutory Method

Probability measures how likely an event is to occur, on a scale from 0 (impossible) to 1 (certain).

P(event) = Number of successful outcomes / Total number of possible outcomes. P(not event) = 1 - P(event).

✎ Official Worked Solution

A quality control batch has 450 items: 18 are defective. Find the probability of choosing a NON-defective item.

1. Non-defective items = 450 - 18 = 432
2. Probability = 432 / 450 = 48 / 50 = **0.96** (or 96% / 24/25)

✓ Examiner Golden Rule

Probabilities can be written as fractions, decimals, or percentages, but NEVER as ratios!

! Watch Out!

The sum of probabilities for all mutually exclusive outcomes is always 1.

TOPIC 27 • CANDIDATE WORKSPACE

P Single & Combined Event Probability: Practice Drills

1 **Question 1 (Foundation):** A fair 6-sided dice is rolled. What is the probability of rolling: a) A prime number (2, 3, 5) b) A number greater than 4? **(2 marks)**

Answer: _____

DATA • STANDARD D28

28 Probability Tree Diagrams & Independent Events

Workplace application of Probability Tree Diagrams & Independent Events.

Core Formula & Statutory Method

Tree diagrams display all possible outcomes for sequential events. Multiply along branches for combined probability.

Independent events do not affect each other. Multiply probabilities: P(A and B) = P(A) x P(B).

Official Worked Solution

A machine has a 0.05 probability of component failure on Run 1 and 0.05 on Run 2. Find probability BOTH fail.

1. Multiply branch probabilities: 0.05 x 0.05
2. Calculation: **0.0025** (or 0.25% / 1 in 400)

Examiner Golden Rule

Multiply ALONG branches (AND rule); ADD across separate end branches (OR rule).

Watch Out!

Check that the probabilities on any set of branching lines add up to 1.0.

TOPIC 28 • CANDIDATE WORKSPACE

P Probability Tree Diagrams & Independent Events: Practice Drills

Answer: _____

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 1 of 16

Topic 1 & 2 Model Answers

Topic 1: Place Value, Ordering & Large Numbers

Q1: 642,085. Order: **458,900; 485,090; 485,200; 502,100** [2m].
Q2: 425,800 – 389,950 = **35,850 parcels** [3m].
Q3: Spent = £485,600 + £392,450 + £184,200 = £1,062,250. Remaining = £1,250,000 – £1,062,250 = **£187,750** [4m].

Topic 2: Negative Numbers & Financial Balances

Q1: –15°C, –12°C, –4.5°C, –0.5°C, +1.8°C, +3°C [2m].
Q2: +3 – 8.5 = **–5.5°C**. Since –5.5°C is colder than –5°C, **Yes, the alarm sounds** [3m].
Q3: –640 + 2,850 – 1,420 – 980 + 195 = **£5.00** in credit [4m].

✎ Personal Action Plan & Calculation Reflections (Part 1)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 2 of 16

Topic 3 & 4 Model Answers

Topic 3: Fraction Operations & Mixed Numbers

Q1: a) 15/24 + 4/24 = **19/24**; b) 8/3 × 3/4 = 24/12 = **2** [2m].
Q2: 4 1/2 ÷ 3/16 = 9/2 × 16/3 = **24 burger patties** [3m].
Q3: Day + Late = 3/5 + 1/4 = 17/20. Night shift = 3/20 = 45 workers → 1/20 = 15 → Total = 15 × 20 = **300 workers** [4m].

Topic 4: Percentages of Amounts & Multipliers

Q1: a) **0.065**; b) **1.12**; c) **0.65**; d) **0.96** [2m].
Q2: £620 × 1.085 = **£672.70** [3m].
Q3: Dec = 14,500 × 1.28 = 18,560. Jan = 18,560 × 0.85 = **15,776 parcels** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 2)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 3 of 16

▶ Topic 5 & 6 Model Answers

Topic 5: Reverse Percentages & Original Value

Q1: £84.00 ÷ 1.20 = **£70.00** [2m].
Q2: Increase = 108. Percentage = (108 ÷ 450) × 100 = **24%** [3m].
Q3: Loss = (1,360 ÷ 3,200) × 100 = **42.5%**. Original price of new model = £2,760 ÷ 0.85 = **£3,247.06** [4m].

Topic 6: Compound Interest & Depreciation

Q1: £2,400 × $(1.03)^2$ = **£2,546.16** [2m].
Q2: £28,000 × $(0.82)^3$ = **£15,438.30** [3m].
Q3: Bank A simple interest = 3 × £450 = £1,350. Bank B compound interest = £10,000 × $(1.042)^3$ − £10,000 = £1,313.66. **Bank A yields £36.34 more** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 3)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 4 of 16

Topic 7 & 8 Model Answers

Topic 7: Ratio Division in 2 & 3 Parts

Q1: 5+3+1 = 9 parts. 1 part = £500. Shares: **£2,500, £1,500, £500** [2m].
Q2: 1.4 t = 1,400 kg. 1+2+4 = 7 parts → 1 part = 200 kg. Sand (2 parts) = **400 kg** [3m].
Q3: Supermarket A = £2.85 ÷ 0.75 kg = £3.80/kg. Supermarket B = £4.32 ÷ 1.2 kg = £3.60/kg. **Supermarket B is better value** [4m].

Topic 8: Direct & Inverse Proportion

Q1: 5 × 4 = 20 cleaner-hours. For 8 cleaners: 20 ÷ 8 = **2.5 hours** (2 hrs 30 mins) [2m].
Q2: Tank volume = 45 × 80 = 3,600 litres. At 30 L/min: 3,600 ÷ 30 = **120 minutes** (2 hours) [3m].
Q3: 3 × 16 = 48 excavator-days. For 6 days: 48 ÷ 6 = 8 excavators total → 8 − 3 = **5 additional excavators** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 4)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 5 of 16

Topic 9 & 10 Model Answers

Topic 9: Decimals & Money Calculations

Q1: a) **485**; b) **0.0736**; c) **5.81** [2m].
Q2: Total = £184.25 + £112.80 + £46.45 = £343.50. Underspent by £350 − £343.50 = **£6.50 underspend** [3m].
Q3: Subtotal = £147 + £54 + £122.50 = £323.50. After 10% discount = £291.15. With 20% VAT = £291.15 × 1.20 = **£349.38** [4m].

Topic 10: Order of Operations (BIDMAS)

Q1: a) 15 − 12 + 2 = **5**; b) 12 ÷ 4 + 9 = 3 + 9 = **12** [2m].
Q2: d = 0.05(1,600) + 0.4(40) = 80 + 16 = **96 feet** [3m].
Q3: C = 1.20 × (65 + 280 − 20) = 1.20 × 325 = **£390.00** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 5)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 6 of 16

Topic 11 & 12 Model Answers

Topic 11: Estimation & Approximation

Q1: a) 50 × 30 = **1,500**; b) 800 ÷ 20 = **40** [2m].
Q2: 200 × £50 = **£10,000**. Overestimate because both numbers were rounded up [3m].
Q3: Upper bounds: 65 cm × 45 cm × 35 cm = **102,375 cm³** [4m].

Topic 12: Metric & Imperial Conversions

Q1: a) **3,450 g**; b) **0.75 litres**; c) (140 ÷ 5) × 8 = **224 km** [2m].
Q2: Total needed = 15 × 3 × 14 = 630 ml. Since 630 ml > 500 ml, **No, one 500 ml bottle is not sufficient** [3m].
Q3: 14 tonnes = 14,000 kg × 2.2 = **30,800 lbs** ≤ 31,000 lbs. **Yes, within legal limit** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 6)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 7 of 16

▶ Topic 13 & 14 Model Answers

Topic 13: Compound Units: Speed, Density & Pressure

Q1: Density = 2,125 ÷ 250 = **8.5 g/cm³** [2m].
Q2: Pressure = 1,800 ÷ 0.04 = **45,000 N/m²** [3m].
Q3: Elapsed = 2h 24m. Minus 15m break = 2h 09m = 2.15 hours. Speed = 115 ÷ 2.15 = **53.5 mph** [4m].

Topic 14: Perimeter of Composite 2D Shapes

Q1: Outer perimeter of L-shape = 2 × (12 + 9) = **42 metres** [2m].
Q2: Fencing length = 2(28 + 18) − 4 = 92 − 4 = 88 m. Cost = 88 × £32.50 = **£2,860.00** [3m].
Q3: Perimeter = 10 + 3 + 3 + 6 + 4 + 6 + 3 + 3 = 38 m. Lengths = 38 ÷ 2.5 = 15.2 → **16 lengths**. Cost = 16 × £14 = **£224.00** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 7)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 8 of 16

Topic 15 & 16 Model Answers

Topic 15: Circumference of Circles

Q1: C = 2 × 3.14 × 4.5 = **28.26 metres** [2m].
Q2: Two straights = 200 m. Circle ends = 3.142 × 64 = 201.09 m. Total lap = **401.09 metres** [3m].
Q3: Three straight edges = 1.8 + 1.2 + 1.8 = 4.8 m. Semicircle arch = 0.5 × 3.142 × 1.2 = 1.885 m. Total = **6.69 metres** [4m].

Topic 16: Area of Rectangles, Triangles & Parallelograms

Q1: a) (14 × 9) ÷ 2 = **63 cm²**; b) 8.5 × 4.0 = **34 m²** [2m].
Q2: Rectangle = 8 × 5 = 40 m². Triangle = (8 × 2.5) ÷ 2 = 10 m². Total area = **50 m²** [3m].
Q3: Floor = 12 × 3.5 = 42 m². 1 box = 8 × 0.25 m² = 2 m². With 10% = 46.2 m² → 23.1 → **24 boxes** × £22 = **£528.00** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 8)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 9 of 16

Topic 17 & 18 Model Answers

Topic 17: Area of Trapeziums & Composite Shapes

Q1: Circle area (r = 3 m) = 3.142 × 9 = **28.28 m²** [2m].
Q2: Trapezium area = ((7.2 + 11.8) ÷ 2) × 5.0 = 47.5 m². Cost = 47.5 × £8.50 = **£403.75** [3m].
Q3: L-shape area = (14 × 10) − (6 × 4) = 140 − 24 = 116 m². Tins = 116 ÷ 25 = 4.64 → **5 tins** × £34.99 = **£174.95** [4m].

Topic 18: Area of Circles & Semicircles

Q1: r = 3 m. Area = 3.142 × 3² = **28.28 m²** [2m].
Q2: Semicircle r = 5 m. Area = 0.5 × 3.142 × 25 = 39.275 m². Cost = 39.275 × £5.80 = **£227.80** [3m].
Q3: Park = 280 m². Pond = 3.142 × 16 = 50.27 m². Gravel area = 229.73 m² × 40 kg = 9,189 kg ÷ 800 = 11.49 → **12 bulk bags** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 9)

Official Mark Scheme & Solutions • Part 10 of 16

Topic 19 & 20 Model Answers

Topic 19: Surface Area of 3D Prisms & Cylinders

Q1: 2(96 + 60 + 40) = 2(196) = **392 cm²** [2m].
Q2: 2 triangles = 2 × 24 = 48 cm². 3 rectangles = (6+8+10) × 15 = 360 cm². Total = **408 cm²** [3m].
Q3: Base = 3.142 × 0.2² = 0.1257 m². Side = 3.142 × 0.4 × 0.75 = 0.9426 m². Total = **1.07 m²** [4m].

Topic 20: Volume of Cuboids, Prisms & Cylinders

Q1: Cross-section = 0.5 × 8 × 5 = 20 cm². Volume = 20 × 22 = **440 cm³** [2m].
Q2: V = 3.14 × 30² × 90 = 254,340 cm³ = **254.3 litres** [3m].
Q3: Average depth = (1.0 + 2.2) ÷ 2 = 1.6 m. Volume = 12 × 6 × 1.6 = **115.2 m³** = **115,200 litres** [4m].

✎ Personal Action Plan & Calculation Reflections (Part 10)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 11 of 16

Topic 21 & 22 Model Answers

Topic 21: Scale Drawings, Maps & Bearings

Q1: 90 cm ÷ 20 = **4.5 cm** [2m].
Q2: Back bearing = 065° + 180° = **245°** [3m].
Q3: Real length = 18.5 × 2 = 37 m; width = 12 × 2 = 24 m. Perimeter = **122 m**; Area = 37 × 24 = **888 m²** [4m].

Topic 22: Mean, Median, Mode & Range

Q1: Sum = 80 → Mean = **10**; Median = (9+9)/2 = **9**; Mode = **9**; Range = 15 – 6 = **9** [2m].
Q2: 5-month total = £92,500. Plus £24,500 = £117,000 ÷ 6 = **£19,500** [3m].
Q3: North: Mean = 83/7 = **11.9 mins**, Range = **7 mins**. South: Mean = 97/7 = **13.9 mins**, Range = **28 mins**. North is faster and more consistent [4m].

✎ Personal Action Plan & Calculation Reflections (Part 11)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 12 of 16

Topic 23 & 24 Model Answers

Topic 23: Grouped Frequency Tables & Estimated Mean

Q1: Sum(fx) = (2.5 × 12) + (7.5 × 20) + (12.5 × 8) = 30 + 150 + 100 = 280. Mean = 280 ÷ 40 = **7.0 km** [2m].
Q2: Modal class = **5–10 km**; Median (20th/21st person) lies in **5–10 km** [3m].
Q3: Sum(fx) = (1×45) + (3×80) + (5×55) + (7×20) = 45 + 240 + 275 + 140 = 700. Mean = 700 ÷ 200 = **3.5 kg** (estimate because exact weights within intervals are unknown) [4m].

Topic 24: Scatter Graphs & Correlation

Q1: a) **Positive correlation**; b) **Negative correlation** [2m].
Q2: Midpoint between (10, 18) and (30, 6) at 20 hours = **12 errors** [3m].
Q3: An outlier does not follow the general trend and should be ignored when drawing the line of best fit; remaining data shows positive correlation [4m].

✎ Personal Action Plan & Calculation Reflections (Part 12)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 13 of 16

Topic 25 & 26 Model Answers

Topic 25: Two-Way Frequency Tables

Q1: Female: Pass 26, Fail 19, Total 45. Male: Pass 23, Fail 12, Total 35. Grand Total = 80 [2m].
Q2: Male pass percentage = (23 ÷ 35) × 100 = **65.7%** [3m].
Q3: Lorries = 120 – 70 = 50. Lorry first-time pass = 50 – (18 + 12) = 20. P(Lorry pass) = 20/50 = **2/5** (0.4 or 40%) [4m].

Topic 26: Pie Charts: Calculating Angles & Frequencies

Q1: 360° ÷ 120 = 3° per guest. Business = **120°**, Holiday = **180°**, Event = **60°** [2m].
Q2: (108 ÷ 360) × 1,800 = **540 voters** [3m].
Q3: Cycle Lanes = (45 ÷ 360) × £2.4m = **£300,000**, which is **12.5%** of the budget [4m].

✎ Personal Action Plan & Calculation Reflections (Part 13)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 14 of 16

Topic 27 & 28 Model Answers

Topic 27: Single & Combined Event Probability

Q1: a) P(prime) = 3/6 = **1/2**; b) P(>4) = 2/6 = **1/3** [2m].
Q2: P(defect-free) = 432/450 = **0.96**. Expected defects in 2,500 = 2,500 × (18/450) = **100 defects** [3m].
Q3: P(both run without fault) = 0.90 × 0.85 = **0.765** (76.5%) [4m].

Topic 28: Probability Tree Diagrams & Independent Events

Q1: P(Fail both) = 0.2 × 0.3 = **0.06** (6%) [2m].
Q2: P(Pass one) = (0.8 × 0.3) + (0.2 × 0.7) = 0.24 + 0.14 = **0.38** (38%) [3m].
Q3: P(No rain either day) = 0.6 × 0.8 = 0.48. P(Rain at least one day) = 1 − 0.48 = **0.52** (52%) [4m].

✎ Personal Action Plan & Calculation Reflections (Part 14)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 15 of 16

Checkpoints 1, 2 & 3 Full Solutions

Checkpoint 1: Number & Number Systems (Strand 1)

Q1: 416 × 28 = **11,648** [2m].
Q2: -14 + 6.5 - 3.2 = **-10.7°C** [2m].
Q3: 1 3/5 + 2 1/4 = 8/5 + 9/4 = 77/20 = **3 17/20** [2m].
Q4: 3,744 ÷ 13 = **288** [2m].
Q5: £420 × 1.20 = **£504.00** [2m].
Q6: 4:2:1 → 7 parts. £1,260 ÷ 7 = £180. Shares: **£720, £360, £180** [3m].
Q7: £68 ÷ 0.85 = **£80.00** [2m].
Q8: £15,000 × $(1.03)^3$ = **£16,390.91** [3m].
Q9: 4 × 15 = 60 tech-hrs → 60 ÷ 6 = **10 hours** [2m].
Q10: 3+2+1=6 parts. 2,400 ÷ 6 = 400 kg. Sand (2 parts) = **800 kg** [2m].
Q11: £32,000 × $(0.80)^2$ = **£20,480.00** [2m].
Q12: 12 × £145 = £1,740. Discount 5% → £1,740 × 0.95 = **£1,653.00** [3m].

Checkpoint 2: Measures, Shape & Space (Strand 2)

Q1: Speed = 135 ÷ 2.25 = **60 mph** [2m].
Q2: a) **4,200 g**; b) **3.5 m**; c) **1.75 litres** [2m].
Q3: C = π d = 22/7 × 14 = **44 cm** [2m].
Q4: Perimeter = 2(12 + 7.5) = **39 m**. Area = 12 × 7.5 = **90 m²** [3m].
Q5: 09:35 + 1h 45m = **11:20** [2m].
Q6: Gross = (37.5 × 12.50) + (6 × 18.75) = £468.75 + £112.50 = **£581.25** [3m].
Q7: Volume = 3.142 × 1.5^2 × 6 = 42.417 m^3 = **42,417 litres** [3m].
Q8: Volume = 3,570 ÷ 8.5 = **420 cm^3** [2m].
Q9: 6.4 cm × 25,000 = 160,000 cm = **1.6 km** [2m].
Q10: Net annual = £28,000 → Monthly net = **£2,333.30** [3m].
Q11: Area = (9 + 15) ÷ 2 × 6 = **72 m²** [2m].
Q12: Surface area = 2π(1)(3) + 2π$(1)^2$ = 18.85 + 6.28 = **25.13 m²** [3m].

Checkpoint 3: Handling Information & Data (Strand 3)

Q1: Total patients = 120. Delay rate = 18/120 = **15%** [2m].
Q2: P(even) = 4/8 = **0.5**; P(greater than 5) = 3/8 = **0.375** [2m].
Q3: Sector angle for car = (36/60) × 360° = **216°** [2m].
Q4: P(blue) = 7/20 = **0.35** [2m].
Q5: Median = **56**. Mean = 509/9 = **56.56**. Range = 75 - 38 = **37** [3m].
Q6: a) **Positive**; b) **Negative**; c) **Zero** correlation [2m].
Q7: Estimated mean delivery time = **23.4 minutes** [3m].
Q8: In 5,000 units: expected defects = 5,000 × 0.02 = **100 defects** [2m].
Q9: Negative correlation. Value at 1,400 kg = **42 mpg** [2m].
Q10: Two-way table analysis: Pass rate = **78.5%** [3m].
Q11: Range A = 14, Range B = 28. Consultant A is **more consistent** [2m].
Q12: Combined probability = 0.15 × 0.20 = **0.03** = 3% [3m].

✎ Personal Action Plan & Calculation Reflections (Part 15)

STEP-BY-STEP EXAMINER GUIDANCE • PROCESS, METHOD & ACCURACY MARKS

Official Mark Scheme & Solutions • Part 16 of 16

Official Mock Examinations 1 & 2 Solutions

Official Mock Exam 1 (64 Marks)

Section A (Non-Calculator, 16 Marks):
Q1: 648 × 35 = **22,680** [M1 column, M1 partial sums, A1 accuracy: 3m].
Q2: 2 2/3 ÷ 4/9 = 8/3 × 9/4 = **6** [M1 reciprocal, A1: 2m].
Q3: C = 22/7 × 28 = **88 cm** [M1 formula, M1 sub, A1: 3m].
Q4: Pre-VAT = £264 ÷ 1.20 = **£220.00** [M1 rev mult, A1, B1 check 220 × 1.2 = 264: 3m].
Q5: 750 ÷ 60 = **12 doses, 30 ml remaining** [M1 div, A1: 2m].
Q6: 4+3+1=8 pts. 1 pt = £300. Diff = (4-1) × 300 = **£900.00** [M1 pt, M1 diff, A1: 3m].
Section B (Calculator Allowed, 48 Marks):
Q7: Taxable = £24,000. Tax = £4,800, NI = £1,920, Pension = £2,194.20. Monthly net = **£2,304.65** [P1, M1, M1, A1: 4m].
Q8: £45,000 × $(0.85)^3$ = **£27,635.63** [P1, M1, A1, B1 rounded: 4m].
Q9: Moving time = 3.5 hrs. Speed = 168 ÷ 3.5 = **48 mph** [P1, M1, A1, B1: 4m].
Q10: Area = 70.4 m². Total rate = £33.00/m². Cost = **£2,323.20** [P1, M1, A1, B1: 4m].
Q11: V = 3.142 × 1.44 × 3.5 = 15.836 m^3 = **15,836 litres** [P1, M1, M1, A1: 4m].
Q12: Midpoints sum = 1,356 ÷ 70 = **19.4 hours** [P1, M1, M1, A1: 4m].
Q13: Carpet area = 102 - 12.57 = 89.43 m². Gross with VAT = **£3,434.11** [P1, M1, M1, M1, A1: 5m].
Q14: Real P = 12 km, Real Area = 3.7 × 2.3 = **8.51 km²** [P1, M1, A1, M1, A1: 5m].
Q15: Two-way table totals 150. P(age ≤ 50 | positive) = 12/39 = **4/13** (30.8%) [P1, M1, A1, B1: 5m].
Q16: Line 1 meets target mean (148.5 mm); Line 2 has much lower range (1.1 vs 4.2 mm), showing superior precision. Recommend Line 2 with slight calibration

Official Mock Exam 2 (64 Marks)

Section A (Non-Calculator, 16 Marks):
Q1: 684 ÷ 18 = **38** [M1 setup, M1 partial, A1 38, B1 check: 4m].
Q2: 24 ÷ 1.2 = 20; 16 ÷ 0.8 = 20. Pallets = 20 × 20 = **400 pallets** [M1, M1, A1, B1: 4m].
Q3: 3/5 × 4/7 = **12/35** [M1 num, M1 den, A1, B1: 4m].
Q4: Increase = £1.25. Percentage = (1.25/12.50) × 100 = **10%** [M1, M1, A1, B1 check: 4m].
Q5: 345.80 - 187.94 = **157.86** [M1 align, M1 borrow, A1, B1: 4m].
Q6: Profit = £180. Margin = (180/450) × 100 = **40%** [M1, M1, A1, B1 check: 4m].
Section B (Calculator Allowed, 48 Marks):
Q7: Van A = 31.85 mpg; Van B = 33.69 mpg. **Van B achieves better efficiency** [P1, M1, M1, A1, B1: 5m].
Q8: Cargo mass = 36 × 650 = 23,400 kg = 23.4 tonnes < 24 t. **Not overloaded** [P1, M1, A1, B1: 5m].
Q9: Moving time = 2.75 hrs. Speed = 168 ÷ 2.75 = **61.1 mph** [P1, M1, A1, B1: 5m].
Q10: $c^2 = 1.2^2 + 5^2 = 26.44$ → c = **5.14 metres** [P1, M1, M1, A1, B1: 5m].
Q11: Estimated mean delivery time = 1585 ÷ 50 = **31.7 minutes** [P1, M1, M1, A1, B1: 5m].
Q12: Original = £3,960 ÷ 0.88 = **£4,500.00** [P1, M1, A1, B1 check: 5m].
Q13: Total with duty = €15,370 → **£13,365.22** [P1, M1, M1, A1, B1: 5m].
Q14: Success rate = 816 / 850 = **96.0%** [P1, M1, A1, B1: 5m].
Q15: Volume = 336 m^3. Power required = 336 × 45 = **15,120 Watts** (15.12 kW) [P1, M1, A1, B1: 4m].
Q16: 15 vans × 3 = 45 tyres paid. Cost = 45 × £95 = **£4,275.00** [P1, M1, A1, B1: 4m].

FINAL REVIEW • EXAM READINESS

Candidate Self-Audit & Progress Matrix

Core Functional Skills Level 2 Mathematics Competencies

Use this self-audit checklist before sitting your Pearson Edexcel Functional Skills Mathematics Level 2 examination.

- **Section A Timing:** 25 minutes for 16 marks (~1.5 minutes per mark). Do mental checks.
- **Section B Timing:** 1 hour 30 minutes for 48 marks (~1.8 minutes per mark). Pace yourself.
- **Always Show Working:** Full method marks can be awarded even if the final calculation has a slip.
- **State Units Clearly:** Remember £ sign, m^2, m^3, kg, mph, or % where appropriate.
- **Show a Check:** Reverse calculation, alternative method, or estimation to secure the checking mark.

✎ Personal Exam Day Checklist & Final Commitments

Everything you need to pass Functional Skills Maths Level 2

The definitive preparation manual for candidates aiming for a pass at Level 2 (GCSE 4/C Equivalent). Master non-calculator mental arithmetic, multi-step compound calculations, fractions, decimals, percentages, perimeter, area, volume, scatter graphs, and probability.

INSIDE THIS PUBLICATION

- ✓ **All 39 Curriculum Standards:** Exhaustive coverage of Number, Measure & Shape, and Handling Data mapped to Pearson Edexcel and City & Guilds.
- ✓ **Section A Non-Calculator Strategy:** Fast-track mental arithmetic, grid multiplication, long division, and fraction manipulations.
- ✓ **Section B Multi-Step Problems:** Stepped breakdowns of 4-to-6 mark complex workplace scenarios showing exact method mark allocation.
- ✓ **Official Examiner Trap Alerts:** Highlighting frequent calculation blunders, unit omission errors, and rounding pitfalls.
- ✓ **Complete Worked Model Answers:** Every question includes full intermediate workings so you know exactly how marks are earned.

Pair with the Companion Practice Workbook:

For extensive hands-on calculation practice, pair this Core Study Guide with the *Functional Skills Maths Level 2 Companion Practice Workbook* containing 120+ stepped drills and blank method workspaces.
