Past Paper 1

Time: 25 minutes | Paper Reference **PMAT2/N01**

Mathematics

Level 2
Section A (Non-Calculator)

You must have:
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses. Tracing paper may be used.

Total Marks
16 /16

My signature confirms that I will not discuss the content of the test with anyone.

Signature: Master Functional Skills (MFS)

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and your answers at each stage.
- Diagrams are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**
- Take the value of π to be 3.14

Information

- The total mark for this section is 16.
- The marks for each question are shown in brackets
  – *use this as a guide as to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and NHS healthcare staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

DO NOT WRITE IN THIS AREA

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

1

(a) Work out 5.2 × 9.6

(2)

Multiply as whole numbers: 52 × 96 **[M1 A1]**

×	50	2
90	4500	180
6	300	12

Sum all parts:

4500 + 180 + 300 + 12 = 4992

5.2 × 9.6 has 2 decimal places total:

4992 ÷ 100 = 49.92

49.92

(b) Work out 4×3^2

[B1] **(1)**

BIDMAS: Calculate indices (powers) before multiplying

$3^2 = 3 \times 3 = 9$

$4 \times 9 = 36$

36

(Total for Question 1 is 3 marks)

2 On Thursday evening Malcolm's bank balance was –£107.35

On Friday morning
- £1867.68 is paid into his bank account
- £715.21 is paid out of his bank account.

No other payments occur.

Work out how much money is in Malcolm's bank account on Friday evening.

(3)

Step 1: Malcolm starts overdrawn by £107.35 **[M1]**

Deposit clears overdraft: 1867.68 – 107.35

$$\begin{array}{r} 1867.68 \\ -\ 107.35 \\ \hline 1760.33 \end{array}$$

Account balance is now +£1760.33

Step 2: Pay out £715.21 from the account **[M1 A1]**

1760.33 – 715.21

$$\begin{array}{r} {\scriptstyle 5\ 10} \\ 1760.33 \\ -\ 715.21 \\ \hline 1045.12 \end{array}$$

Final Friday evening balance

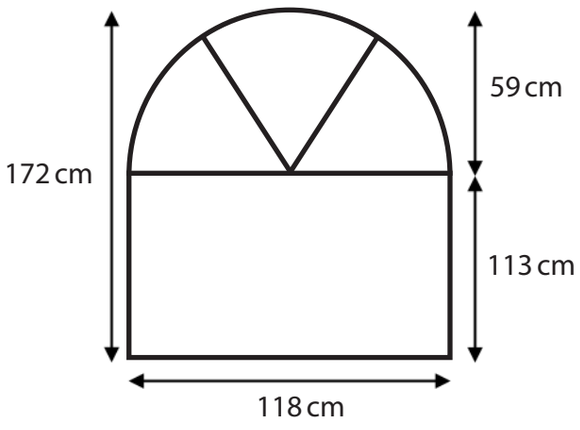

£ **1045.12**

(Total for Question 2 is 3 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

3 Akash needs to put plastic trim on a shaped window.
The window is made using a rectangle and a semi-circle.

The diagram shows the places where he needs to put the plastic trim.

Key
plastic trim

Akash estimates that he will need 700 cm of plastic trim in total.

Use estimation to check if Akash's estimate is sensible.
You **must** show your working.

(4)

Step 1: Estimate key dimensions to convenient values **[B1]**

- Width = 118 cm ≈ 120 cm (diameter of semi-circle)
- Radius = 59 cm ≈ 60 cm
- Height of rectangle = 113 cm ≈ 110 cm
- pi ≈ 3 (standard estimation for non-calculator)

Step 2: Arc length of semi-circle = (pi × d) ÷ 2 **[M1]**

Arc ≈ (3 × 120) ÷ 2 = 360 ÷ 2 = 180 cm

Step 3: Total trim = Arc + Rectangle edges & internal trim **[M1]**

Trim ≈ 180 + 110 + 110 + 120 + 120 + 60 + 60
= 760 cm

Step 4: Compare with Akash's estimate of 700 cm **[A1]**

760 cm > 700 cm: Akash will run out of trim (not sensible)

No (needs ~760 cm)

(Total for Question 3 is 4 marks)

DO NOT WRITE IN THIS AREA

4 Calvin is a train company manager.

He compares the arrival times of a morning train service for 10 days in the summer and for 10 days in the winter.

In the summer the median number of minutes late was 12.7 minutes.
The range of the number of minutes late was 11 minutes.

The results below show the number of minutes late in the winter.

8, 32, 44, 5, 17, 67, 9, 14, 10, 26

Calvin thinks that in the winter
- the median number of minutes late increases
- the train service is less consistent.

Is Calvin correct?
Show why you think this giving reasons with your answers.

(6)

Summer Baseline: Median = 12.7 mins, Range = 11 mins

Step 1: Order Winter delays from smallest to largest

5, 8, 9, 10, 14, 17, 26, 32, 44, 67

(5th & 6th values)

Step 2: Calculate Winter Median (mean of 5th and 6th numbers) **[M1 A1]**

Median = (14 + 17) ÷ 2 = 31 ÷ 2 = 15.5 minutes

Step 3: Calculate Winter Range (Highest – Lowest) **[M1 A1]**

Range = 67 − 5 = 62 minutes

Turn over to write comparison and final conclusion

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Summary of Comparisons:

[C1 C1]

Measure	Summer	Winter	Comparison / Conclusion
Median	12.7 mins	15.5 mins	15.5 > 12.7: Delays increase
Range	11 mins	62 mins	62 > 11: Much less consistent

Yes, Calvin is correct.

1. Median: The winter median delay of 15.5 minutes is greater than the summer median of 12.7 minutes (15.5 > 12.7), so the average delay increased.

2. Consistency: The winter range of 62 minutes is much greater than the summer range of 11 minutes (62 > 11), so the train arrival times are far less consistent.

(Total for Question 4 is 6 marks)

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

1 Adam works for an agency.
His normal hourly rate is £8.32

The agency asks Adam to work 6 hours for a new company.
Adam will be paid time and a third of his normal hourly rate.

How much will Adam get paid in total when working for the new company?

(3)

Time and a third = 1 + 1/3 = 4/3 of normal rate

Method 1: Standard Pay + 1/3 Overtime Premium

- **Standard pay for 6 hours = 6 × £8.32 = £49.92** [M1]
- **One-third additional rate = £49.92 ÷ 3 = £16.64** [M1]
- **Total pay = £49.92 + £16.64 = £66.56** [A1]

Method 2 (Alternative Verification):

Overtime rate per hour = 8.32 × (4/3) = £11.0933...

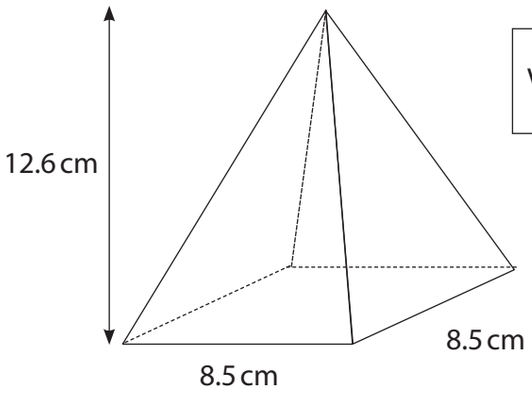

Total pay = 6 × £11.0933... = £66.56 (confirmed)

£ **66.56**

(Total for Question 1 is 3 marks)

2 Here is a square based pyramid.

Volume of pyramid = $\frac{1}{3}$ × area of base × height

Work out the volume of this pyramid.

(3)

Step 1: Calculate the area of the square base

Base is a square with side length 8.5 cm:

Area of base = 8.5 × 8.5 = 72.25 cm2 **[M1]**

Step 2: Calculate the pyramid volume

Volume = 1/3 × area of base × height = 1/3 × 72.25 × 12.6 **[M1]**

= 1/3 × 910.35 = 303.45 cm3 **[A1]**

Tutor Tip: 12.6 ÷ 3 = 4.2; 72.25 × 4.2 = 303.45 cm3 exactly

303.45 cm^3

3 Rana donated to 4 charities last year.
She gave £175 to each of these charities.

This year Rana wants to donate the same total amount between 6 charities.
Each charity will receive an equal amount.

(a) How much will each charity receive this year?

(3)

Step 1: Calculate total amount donated last year

Total donation = 4 charities × £175 = £700 [M1]

Step 2: Share equally among 6 charities this year

Amount per charity = £700 ÷ 6 = £116.6666... [M1]

Round to 2 decimal places (currency):

= £116.67 [A1]

£ **116.67**

☑ (b) Use reverse calculations to check your answer.

(1)

Reverse calculation check: [B1]

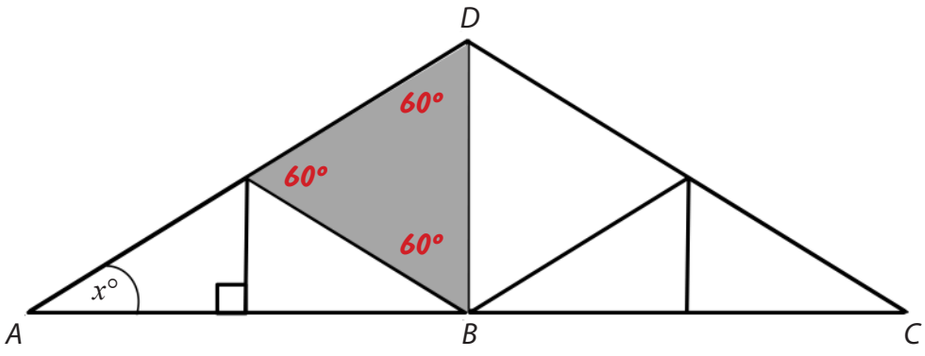

116.666... × 6 = £700 (or 700 ÷ 4 = £175)

** Confirms original total of £700 is recovered exactly*

(Total for Question 3 is 4 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

4 Samir is a roofer.
Here is a section of a roof made from straight pieces of wood.

Samir knows that

- the shaded triangle is an equilateral triangle
- the line *DB* is a line of symmetry
- the line *ABC* is a straight line
- the size of the angle marked $x°$ indicates the pitch of the roof.

The table shows information about the pitch and angle of a roof.

Pitch	Angle (°)
12	45
11	42.5
10	40
9	37
8	33.75
7	30
6	26.5
5	22.5
4	18.5
3	14
2	9.5
1	4.5
0	0

Find the value of x and use the table to give the pitch of the roof.

(3)

1. Shaded triangle is equilateral: **[M1]**

All 3 interior angles are equal: $180° \div 3 = 60°$

2. Line DB is a vertical line of symmetry (90°): **[M1 A1]**

In the right-angled triangle: $x = 180° - 90° - 60° = 30°$

3. Look up angle 30° in the pitch table: **[A1]**

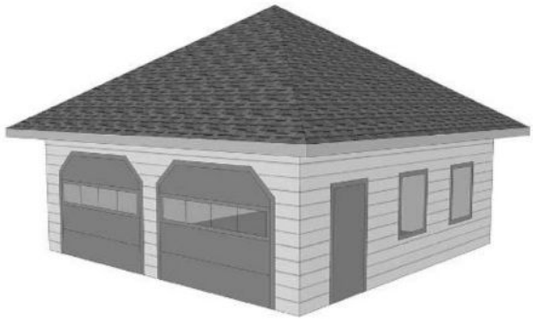

Angle of 30° corresponds to Pitch = 7

$x =$ 30

pitch = 7

(Total for Question 4 is 3 marks)

5 Samir wants to work out the cost of the tiles needed to replace a roof.
The roof has 4 identical faces.

Each face is a triangle.
Each triangle has a base length of 7.6 m and a height of 4.8 m.

Samir has this information.

roof tiles

1 pack of tiles covers 13.8 m^2 (including overlaps)
each pack costs £716.10

Samir can only buy whole packs of these tiles.

Calculate the total cost of the tiles for the 4 faces of this roof.

(5)

Step 1: Calculate the area of 1 triangular roof face

Area of triangle = (base × height) ÷ 2 **[M1]**

= (7.6 × 4.8) ÷ 2 = 36.48 ÷ 2 = 18.24 m2

Step 2: Total area for all 4 identical faces **[M1]**

Total roof area = 4 × 18.24 m2 = 72.96 m2

Turn over for packs calculation and total cost -->

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Working continued from Page 14 (Roof Area = 72.96 m2):

Step 3: Number of tile packs needed (1 pack covers 13.8 m2)

Packs needed = 72.96 ÷ 13.8 = 5.2869... packs **[M1 M1]**

Must buy whole packs: Round UP to 6 packs

Step 4: Total cost of 6 packs of tiles **[A1]**

Total cost = 6 × £716.10 = £4296.60

£ **4296.60**

(Total for Question 5 is 5 marks)

6 Farah is buying clothes from a website.
The website shows this information about a jacket Farah wants to buy.

Jacket

original price £30.99
sale price £16

The website claims this is a saving of 46%.

Is the sale price a saving of 46% on the original price?
Show why you think this.

(3)

Method 1: Calculate actual percentage saving

- Actual saving = Original price – Sale price

  = £30.99 – £16.00 = £14.99 [M1]

- Percentage saving = (Saving ÷ Original price) × 100

  = (14.99 ÷ 30.99) × 100 = 48.3704...% [M1]

  ≈ 48.4%

Method 2 (Alternative check with 46% saving):

46% of £30.99 = 0.46 × 30.99 = £14.2554 ≈ £14.26

Sale price would be = £30.99 – £14.26 = £16.73 (not £16.00)

Conclusion:

48.4% ≠ 46% (The actual saving is 48.4%, which is more than 46%) [A1]

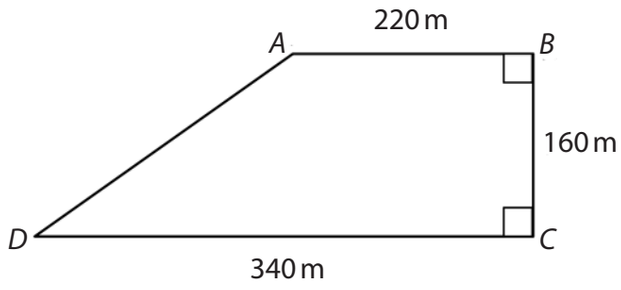

Therefore the website claim of 46% is NOT correct.

No (saving is 48.4%)

(Total for Question 6 is 3 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

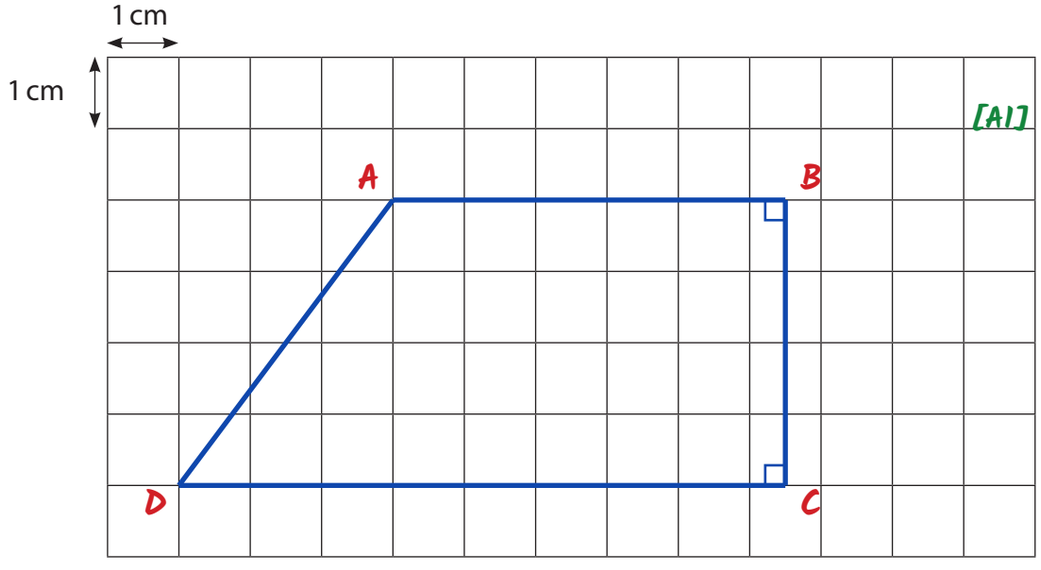

7 Here is a quadrilateral.

Scale (1 cm = 40 m): [M1]
- DC: 340÷40 = 8.5 cm
- BC: 160÷40 = 4.0 cm
- AB: 220÷40 = 5.5 cm

(a) Draw this shape on the grid.
Use the scale 1 cm to 40 m.

(2)

[A1]

(b) Use your answer to part (a) to work out the actual length of the line *AD*.
Remember to use the grid and the scale.

(2)

Measure line AD on diagram = 5 cm (3 squares across, 4 squares up) [M1]

Pythagoras verification: $\sqrt{(3^2 + 4^2)} = \sqrt{(9 + 16)} = \sqrt{25} = 5$ cm

Actual length = 5 cm × 40 m/cm = 200 m [A1]

200 m

(Total for Question 7 is 4 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

8 Pablo is investigating the relationship between the land area and the population of 8 European countries.

He has this information.

Country	Land area ($1000\,km^2$)	Population in 2018 (millions)
Germany	360	83
Greece	130	11
Italy	300	58
Poland	310	39
Spain	510	47
France	640	67
Romania	240	19
United Kingdom	240	67

Pablo finds out that the United Kingdom's
- land area is 93 400 square miles
- population in 2011 was 56.1 million
- population increased by 19.6% between 2011 and 2018

He wants to add this information to the table above.
He will round the land area to the nearest 10 000 and round the population to the nearest million.

Pablo knows
1 square mile = 2.6 km^2

Draw a suitable graph and write a comment about the correlation.
Remember to complete the table and use the grid to draw your graph.

(6)

Step 1: Calculate UK Land Area in 1000 km2 [M1]

93,400 sq miles × 2.6 = 242,840 km2

Round to nearest 10,000: 240,000 km2 --> Table entry: 240

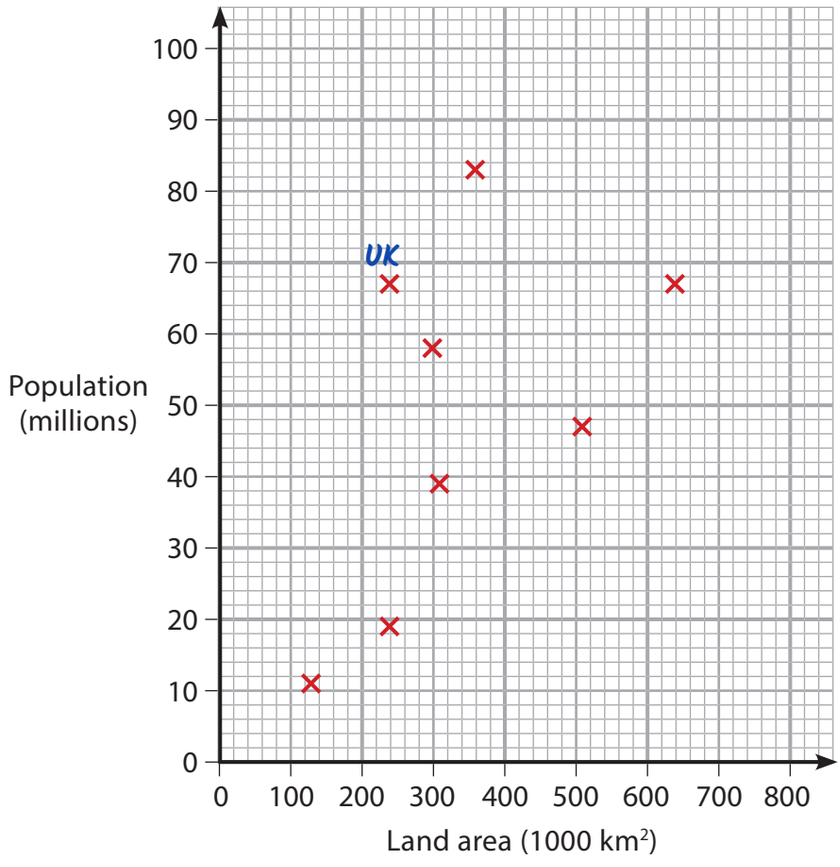

Step 2: Calculate UK Population in 2018 (millions) [M1 A1]

19.6% increase: Multiplier = 1 + 0.196 = 1.196

2018 Population = 56.1 × 1.196 = 67.0956 million

Round to nearest million: 67 million --> Table entry: 67

[MI A1]

Correlation & Analysis: [C1]

- There is a weak positive correlation between land area and population.
- In general, countries with larger land areas tend to have larger populations.
- Notice that the UK is an outlier: it has a small land area (240,000 km2) but a very high population (67 million), giving it high population density.

DO NOT WRITE IN THIS AREA

9 Magda wants to compare the population density of the two largest countries in the world.

She can use this formula.

$$K = \frac{P}{2.59M}$$

K = population density (people per km^2)

P = population (millions)

M = land area (million square miles)

Canada has a population density of 3.57 people per km^2

Russia has

- a population of 143.96 million
- a land area of 6.593 million square miles.

Magda thinks that Russia has a greater population density than Canada.

Is Magda correct?
Show why you think this.

(3)

Formula: $K = P \div (2.59 \times M)$

• Canada population density = 3.57 people per km2

Calculate Russia population density (K): [M1]

• P = 143.96 million, M = 6.593 million sq miles

• Denominator = 2.59 × 6.593 = 17.07587

• K = 143.96 ÷ 17.07587 = 8.4306... people per km2 [M1]

Comparison & Decision:

8.43 > 3.57 (Russia density 8.43 is greater than Canada 3.57)

Therefore Magda is correct. [A1]

Yes (8.43 > 3.57)

10 (a) Work out $3\frac{3}{8} - \frac{9}{8}$

Give your answer as a mixed number.

(2)

Step 1: Convert the mixed number 3 3/8 to an improper fraction

3 3/8 = (3 × 8 + 3) ÷ 8 = 27/8 **[M1]**

Step 2: Subtract the fractions (same denominator of 8)

27/8 − 9/8 = (27 − 9) ÷ 8 = 18/8

Step 3: Convert to a mixed number and simplify

18 ÷ 8 = 2 remainder 2, so 2 2/8 = 2 1/4 **[A1]**

2 1/4

☑ (b) Use estimation to show a check of your answer.

(1)

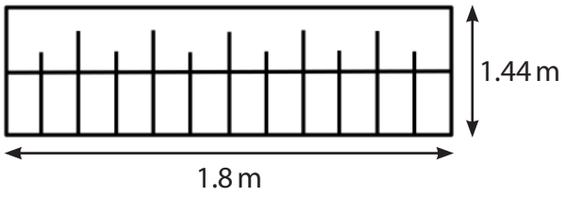

Estimation check: **[B1]**

3 3/8 ≈ 3.5, 9/8 ≈ 1

3.5 − 1 = 2.5 (very close to 2.25 = 2 1/4)

(Total for Question 10 is 3 marks)

11 Emilio makes metal fences.
He is making a fence using this design.

The fence will need
- 3 horizontal metal pieces of length 1.8 m
- 2 tall metal pieces of length 1.44 m
- 5 medium metal pieces
- 6 short metal pieces as shown on the diagram.

The heights of the tall, medium and short metal pieces are in the ratio 9 : 8 : 7

How many metres of metal in total does Emilio need to make the fence?

(5)

Heights ratio: Tall : Medium : Short = 9 : 8 : 7

- Tall piece = 1.44 m: 9 parts = 1.44 m [M1]
- 1 part = 1.44 ÷ 9 = 0.16 m
- Medium piece = 8 parts = 8 × 0.16 = 1.28 m [M1 M1]
- Short piece = 7 parts = 7 × 0.16 = 1.12 m

Calculate total length of all pieces needed:

- 3 horizontal pieces: 3 × 1.8 m = 5.40 m [M1]
- 2 tall vertical pieces: 2 × 1.44 m = 2.88 m
- 5 medium vertical pieces: 5 × 1.28 m = 6.40 m
- 6 short vertical pieces: 6 × 1.12 m = 6.72 m

Total metal needed:
= 5.40 + 2.88 + 6.40 + 6.72 = 21.4 m [A1]

Summary of metal pieces (from previous page):

- Horizontal pieces: 3 × 1.8 m = 5.40 m
- Vertical tall pieces: 2 × 1.44 m = 2.88 m
- Vertical medium pieces: 5 × 1.28 m = 6.40 m
- Vertical short pieces: 6 × 1.12 m = 6.72 m
- Total metal needed = 5.40 + 2.88 + 6.40 + 6.72 = 21.4 m

21.4 m

(Total for Question 11 is 5 marks)

12 The table shows some information about 60 holidays bought by customers at a travel agency.

[M1 A1]

		Holiday type			
		Room only	**Bed and breakfast**	**All-inclusive**	**Total**
Customer type	**Couples**	3	13	18	34
	Families	2	10	14	26
	Total	5	23	32	60

(a) Complete the table above.

(2)

Step-by-step table completion:

- Couples B&B: 34 − 3 − 18 = 13 (or column total: 23 − 10 = 13)
- Families Total: 60 − 34 = 26
- Families Room only: 26 − 10 − 14 = 2
- Total Room only: 3 + 2 = 5; Total All-inclusive: 18 + 14 = 32
- Check grand total: 5 + 23 + 32 = 60 (confirmed)

A customer who bought a holiday at the travel agency is chosen at random.

(b) What is the probability that this customer bought an all-inclusive holiday for a couple?
Give your answer as a fraction in its simplest form.

(2)

Total customers = 60; Couples who bought all-inclusive = 18 **[M1]**

Probability = 18/60

Divide numerator and denominator by HCF = 6:

18/60 = (18 ÷ 6) / (60 ÷ 6) = 3/10 **[A1]**

$\frac{3}{10}$

The travel agent says

'Of the couples and families who bought holidays the couples were more likely to have bought an all-inclusive holiday.'

(c) Is the travel agent correct?
Show why you think this.

(2)

Compare probability of buying all-inclusive:

- **Couples: 18 ÷ 34 = 0.5294... ≈ 52.9%** **[M1]**
- **Families: 14 ÷ 26 = 0.5384... ≈ 53.8%**

53.8% > 52.9% --> Families were more likely! **[A1]**

Therefore the travel agent is NOT correct.

No (53.8% > 52.9%)

(Total for Question 12 is 6 marks)

TOTAL FOR SECTION B IS 48 MARKS
TOTAL FOR PAPER IS 64 MARKS
