Master Functional Skills	Model Solutions (MFS)

Pearson Edexcel Functional Skills

Centre Number	Candidate Number
MFS-UK	FSM01/01

Mathematics

Level 1

6 – 10 November 2017
Time: 1 hour 30 minutes

Paper Reference
FSM01/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A: Catering college

Answer all questions in this section.

Write your answers in the spaces provided.

1 Mick is starting a course at college.

In the first week he will go to college every day from Monday to Friday.
Mick has a total of £12 to spend on lunch in this week.

He wants to spend £2.35 each day on lunch.

(a) Can Mick afford to spend £2.35 on lunch each day in this week?

(2)

Use the box below to show clearly how you get your answer.

Step 1: Calculate total lunch cost for Monday to Friday (5 days):

- *Number of college days = 5 days (Monday to Friday)*
- **Total cost = 5 × £2.35 = £11.75 [M1]**

  Working: 5 × £2.00 = £10.00; 5 × £0.35 = £1.75; £10.00 + £1.75 = £11.75

Step 2: Compare total lunch cost with Mick's budget:

- *Mick's budget = £12.00*
- **£11.75 < £12.00 (Mick has £12.00 – £11.75 = £0.25 / 25p left over).**
- *Alternative daily rate check: £12.00 ÷ 5 = £2.40 per day (> £2.35 per day).*

Step 3: State clear conclusion:

Therefore, Yes, Mick can afford to spend £2.35 each day. [A1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Mick needs to get to college on time.
He needs to plan what time to get up.

Mick will get a bus from Oxton to College bus stop.
Here is part of the bus timetable.

Stone	0706	0732	0800	0845
Oxton	0722	0748	0815	0901
Redworth	0739	0805	0833	0916
College bus stop	0801	0827	0855	0929

Mick needs to get to College bus stop by 9 am.

He allows

$\frac{3}{4}$ of an hour to get up and get ready to leave the house

10 minutes to walk from his house to the bus stop at Oxton.

Mick thinks the latest time he can get up in the morning is 7:15 am.

(b) Is Mick correct?
Show why you think this. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Identify latest bus arriving at College bus stop by 9 am:

- *08:15 bus from Oxton arrives at College at 08:55 am (before 9:00 am). [B1]*

  (The next bus at 09:01 arrives at 09:29 am, which is too late).

Step 2: Calculate total preparation and walking time:

- *Getting ready: 3/4 hour = 45 mins; Walk to bus: 10 mins*
- *Total time needed before bus = 45 mins + 10 mins = 55 minutes. [M1]*

Step 3: Work backwards from the 08:15 bus departure time:

- *Leave house: 08:05 am; Latest get up: 08:05 – 45 mins = 07:20 am. [M1]*

  (If Mick gets up at 7:15 am, he arrives at bus stop at 8:10 am, 5 mins before bus).

Step 4: State final decision:

Therefore, No, Mick is NOT correct (latest get up is 7:20 am). [A1]

(Total for Question 1 is 6 marks)

2 Mick completes a total of 5 assessments for his course.

He gets these marks.

56 42 47 59 48

Mick needs an average mark of 50 or more to pass the course.

Does Mick pass the course?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate the total of all 5 assessment marks:

- *Total = 56 + 42 + 47 + 59 + 48 = 252 marks [M1]*

Working: (56 + 42) + (47 + 59) + 48 = 98 + 106 + 48 = 252 marks

Step 2: Calculate the mean (average) mark (Total ÷ 5):

- *Mean mark = 252 ÷ 5 = 50.4 marks [M1]*

Step 3: Compare mean mark with the 50 pass threshold:

- *50.4 ≥ 50 (Mick exceeds the required average by 0.4 marks).*
- *Total marks comparison: 5 assessments × 50 = 250 needed; 252 scored > 250.*

Step 4: State final conclusion:

Therefore, Yes, Mick passes the course (mean is 50.4). [A1]

Use the box below to show your check.

☑

Reverse Calculation Check:

- *Reverse multiplication: 50.4 × 5 = 252 marks [B1]*
- *Subtraction check: 252 − 48 − 59 − 47 − 42 = 56 (matches first assessment)*

(Total for Question 2 is 4 marks)

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

3 Mick makes cheese flan in the college restaurant.

He knows that one cheese flan is enough for 8 people.
Each cheese flan contains 5 eggs.

Mick is making cheese flan for 80 people.
He needs to know how many eggs to use.

Mick thinks he needs to use 45 eggs.

(a) Is Mick correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate the number of cheese flans needed for 80 people:

- 1 flan serves 8 people
- **Number of flans needed = 80 ÷ 8 = 10 flans [M1]**

Step 2: Calculate the total number of eggs required:

- Each flan contains 5 eggs
- **Total eggs needed = 10 flans × 5 eggs per flan = 50 eggs [M1]**

Step 3: Compare required eggs with Mick's estimate (45 eggs):

- **Mick thinks he needs 45 eggs, but he actually needs 50 eggs (5 eggs short).**
- Alternative calculation: 45 eggs ÷ 5 = 9 flans; 9 × 8 = 72 people (< 80 people).

Step 4: State final decision:

Therefore, No, Mick is NOT correct (needs 50 eggs). [A1]

DO NOT WRITE IN THIS AREA

Mick asks some customers who eat in the restaurant to fill in this questionnaire.

Tick (✓) one answer for each question.

1. What did you think of your meal?

Poor	OK	Good
☐	☐	☐

2. What did you think of the service?

Poor	OK	Good
☐	☐	☐

3. What did you think of the value for money?

Poor	OK	Good
☐	☐	☐

Mick needs to record the answers from the customers on a data summary sheet.

(b) Design a data summary sheet for Mick.

Tutor Design Strategy for Question 3(b) Data Summary Sheet:

To achieve full marks [3 marks], the summary sheet must satisfy:

1. Two-way table layout: clear headings for questions and rating scales [M1]

2. Comprehensive questionnaire categories: Meal, Service, Value for money

3. Distinct rating response options: Poor, OK, Good [M1]

4. Input opportunities: designated tally blocks and total frequency count

5. Row totals and column totals to audit and reconcile overall customer counts [A1]

See the complete model summary sheet designed in the box on page 7 overleaf!

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show your data summary sheet.

Two-Way Customer Feedback Data Summary Sheet:

Model design with input opportunities for tally marks and frequency counts [M1 M1 A1]

Question / Category	Poor	OK	Good	Total
1. Meal Quality	/// (3)	//// //// (9)	//// //// //// (15)	27
2. Customer Service	/ (1)	//// (4)	//// //// //// // (17)	22
3. Value for Money	// (2)	//// /// (8)	//// //// //// / (16)	26
Overall Total	6	21	48	75

Key Examination Criteria Fulfilled: [M1 M1 A1]

- Two-way layout: rows list all 3 questions; columns list all 3 rating categories.
- Distinct input opportunities: space for tallies and corresponding frequency totals.
- Marginal totals: row totals verify that every customer answered each question.
- Grand total: column totals provide immediate executive summary of overall satisfaction.

(Total for Question 3 is 6 marks)

SECTION B: Holiday in Pula

Answer all questions in this section.

Write your answers in the spaces provided.

4 Olga manages a tour company in Pula.
She needs to plan a walk for the company.

Olga has this sketch of different places in Pula.

Olga will start and end the walk at the hotel.
She wants the walk to be no more than 6 km in distance.

Olga wants the walk to include

- a visit to the church
- a visit to the arch
- the walk around the Old Town.

Plan a walk for Olga.
Show the total distance of the walk. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Choose a walk starting and finishing at hotel visiting all 3 sites: [M1 A1]

• Route: Hotel -> Arch -> Old Town (Walk around Old Town) -> Church -> Hotel

Step 2: Calculate total walking distance: [M1]

• Distances: 0.5 (Arch) + 1.6 (OT) + 1.2 (Walk) + 1.3 (Church) + 0.8 (Hotel)

• Total distance = 0.5 + 1.6 + 1.2 + 1.3 + 0.8 = 5.4 km [A1]

Therefore, Total distance is 5.4 km (which is ≤ 6 km maximum allowed).

(Total for Question 4 is 4 marks)

5 The tour company offers different tours.

Olga has this information about the number of people who booked on each tour last year.

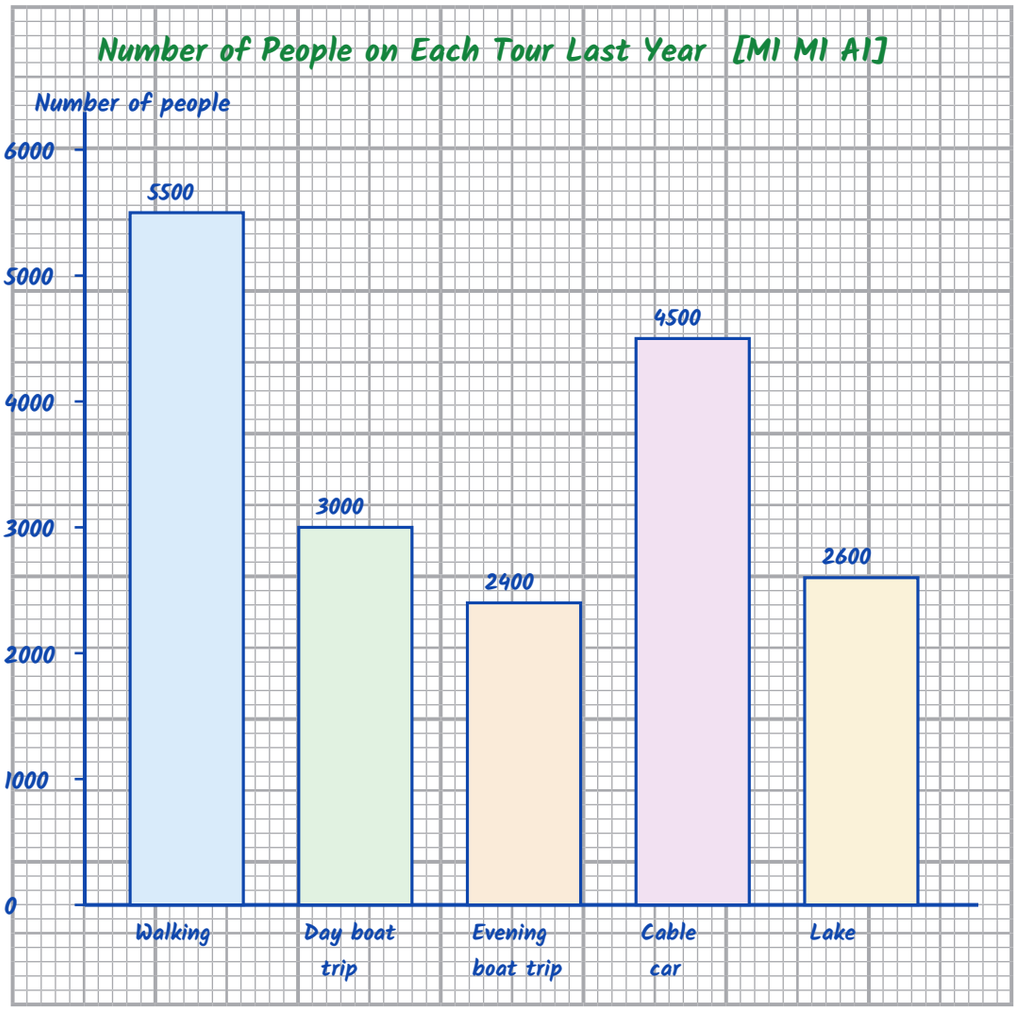

tour	Walking	Day boat trip	Evening boat trip	Cable car	Lake
number of people	5500	3000	2400	4500	2600

Olga wants to show this information in a graph or chart.

(a) Draw a suitable graph or chart for Olga.

(3)

Use the grid below to draw your graph or chart.

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Last year, the company had 18 000 bookings in total.
5400 of these bookings were for boat trips.

Olga says

> $\frac{1}{3}$ of all our bookings last year were for boat trips.

(b) Is Olga correct?
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate 1/3 of the total bookings (18 000):

- *Total bookings = 18 000*
- **1/3 of 18 000 = 18 000 ÷ 3 = 6 000 bookings [M1]**

Step 2: Compare 1/3 with the actual boat trip bookings (5 400):

- *Actual boat trip bookings = 5 400*
- **Comparison: 5 400 ≠ 6 000 (actual is 600 bookings fewer than one-third).**
- *Fractional check: 5 400 ÷ 18 000 = 0.30 = 3/10 (30%), whereas 1/3 ≈ 33.3%.*

Step 3: State final decision:

Therefore, No, Olga is NOT correct (1/3 is 6 000 vs 5 400). [A1]

Use the box below to show your check.

☑

Reverse Calculation Check:

- **Reverse check: 6 000 × 3 = 18 000 bookings [B1]**
- *Alternative check: 5 400 × 3 = 16 200 ≠ 18 000 (confirms incorrect)*

(Total for Question 5 is 6 marks)

DO NOT WRITE IN THIS AREA

6 Winston and Karen are going on holiday to Pula.

They want to book a double room in a hotel.
The hotel must be less than 1 mile from the city centre.

They want to spend as little money as possible.

They find this information.

hotel	type of room	distance from city centre	cost of room for one night
Grand Hotel	double	0.9 miles	£193
Beach Hotel	double	1.2 miles	£ 95
Palace Hotel	twin	0.6 miles	£149
Club Hotel	double	0.8 miles	£160
Royal Hotel	twin	1.6 miles	£169
Mountain Hotel	double	0.7 miles	£169

(a) Which hotel should Winston and Karen book?

(1)

Use the box below to show clearly how you get your answer.

Step 1: Filter hotels by room type (must be double room):

- *Eligible double rooms: Grand (£193), Beach (£95), Club (£160), Mountain (£169).*
  (Palace Hotel and Royal Hotel are twin rooms -> Excluded).

Step 2: Filter by distance from city centre (must be less than 1 mile):

- *Grand Hotel: 0.9 miles (< 1 mile) - Eligible*
- *Beach Hotel: 1.2 miles (> 1 mile) - Excluded*
- *Club Hotel: 0.8 miles (< 1 mile) - Eligible*
- *Mountain Hotel: 0.7 miles (< 1 mile) - Eligible*

Step 3: Compare costs of eligible hotels to find the lowest price:

- *Grand (£193) vs Mountain (£169) vs Club (£160): £160 is cheapest! [M1]*

Step 4: State final hotel recommendation:

Therefore, Winston and Karen should book Club Hotel (£160). [B1]

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

In the hotel Winston and Karen see this offer.

Walking Tour

Normal price
250 Croatian Kuna
Book today save 15%

(b) Work out 15% of 250

(2)

Use the box below to show clearly how you get your answer.

Method 1: Percentage Building-Block Method (10% + 5%):

- *Find 10% of 250: 250 ÷ 10 = 25 [M1]*
- *Find 5% of 250: 10% ÷ 2 = 25 ÷ 2 = 12.5*
- *Add to find 15%: 25 + 12.5 = 37.5 Croatian Kuna*

Method 2: Decimal Multiplier / Fraction Method:

- *15% as a decimal = 0.15*
- *Calculation: 0.15 × 250 = 37.5 Croatian Kuna [M1]*
- *Fraction method: (15 ÷ 100) × 250 = 3750 ÷ 100 = 37.5*

Final Answer:

37.5 (or 37.50) Croatian Kuna [A1]

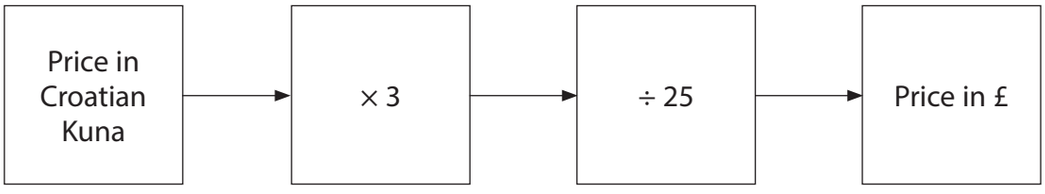

(Total for Question 6 is 3 marks)

DO NOT WRITE IN THIS AREA

7 Winston wants to go on a boat trip.
He sees these offers for a half day boat trip.

Offer A	**Offer B**
Boat trip	Boat trip
£26.50	230 Croatian Kuna

Winston knows this rule to convert from Croatian Kuna to £.

Winston wants to know which offer is cheaper.

Which offer is cheaper?

(3)

Use the box below to show clearly how you get your answer.

Step 1: Convert Offer B (230 Croatian Kuna) into £ using the rule:

- Rule: Price in Croatian Kuna × 3 ÷ 25 = Price in £
- **Multiply by 3: 230 × 3 = 690 [M1]**
- **Divide by 25: 690 ÷ 25 = £27.60 [M1]**

Step 2: Compare Offer A and Offer B in pounds (£):

- Offer A = £26.50
- Offer B = £27.60
- **£26.50 < £27.60 (Offer A is £27.60 − £26.50 = £1.10 cheaper).**

(Alternative: £26.50 in Kuna = 26.50 × 25 ÷ 3 = 220.83 Kuna < 230 Kuna).

Step 3: State clear conclusion:

Therefore, Offer A is cheaper (£26.50 vs £27.60). [A1]

SECTION C: Hot tub

Answer all questions in this section.

Write your answers in the spaces provided.

8 Mr Smith wants to buy a hot tub.

There are two options to pay for the hot tub.

Hot tub	
Option 1	cash price £5000
Option 2	pay 20% of the cash price now and pay £183.80 each month for 2 years

Mr Smith uses option 2

How much extra will Mr Smith pay in total using option 2 instead of option 1?

(5)

Use the box below to show clearly how you get your answers.

Step 1: Calculate the 20% deposit for Option 2:

- *Deposit = 20% of £5000 = (20 ÷ 100) × £5000 = £1,000.00 [M1]*

Step 2: Calculate total monthly instalments over 2 years:

- *Number of months = 2 years × 12 months = 24 months [M1]*
- *Total instalments = 24 × £183.80 = £4,411.20 [M1]*

Working: 20 × £183.80 = £3,676.00; 4 × £183.80 = £735.20; £3676 + £735.20 = £4,411.20

Step 3: Calculate the total cost of Option 2:

- *Total Option 2 = Deposit + Instalments*
- *Total Option 2 = £1,000.00 + £4,411.20 = £5,411.20 [M1]*

Step 4: Calculate how much extra Mr Smith will pay:

- *Extra paid = Option 2 Total − Option 1 Cash Price*
- *Extra paid = £5,411.20 − £5,000.00 = £411.20*

Final Answer:

£411.20 extra [A1]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Option Comparison & Payment Breakdown Matrix: [M1 A1]

Payment Component	Option 1 (Cash)	Option 2 (Finance)
Initial Upfront Deposit	£5,000.00	£1,000.00 (20%)
Monthly Instalment Amount	None	£183.80 / month
Duration of Agreement	Immediate	24 months (2 yrs)
Total Monthly Instalments	£0.00	£4,411.20 (24 mos)
Total Overall Cost	£5,000.00	£5,411.20
Extra Cost Incurred on Finance	—	**£411.20 extra**

Reverse Calculation & Financial Reconciliation Check:

- Reverse finance subtraction: £5,411.20 − £1,000.00 = £4,411.20
- **Reverse monthly division: £4,411.20 ÷ 24 = £183.80 per month [B1]**
  (Confirms 24 monthly instalments of £183.80 matches agreement exactly)
- Difference check: £5,000.00 + £411.20 = £5,411.20 (verified exact cost difference).

Tutor Examination Note on Money Notation:

- In Pearson Edexcel mark schemes, financial answers must include two decimal places.
- **Writing "£411.2" will lose the accuracy mark [A1] — always write £411.20!**

(Total for Question 8 is 5 marks)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Mr Smith draws a sketch of the platform.

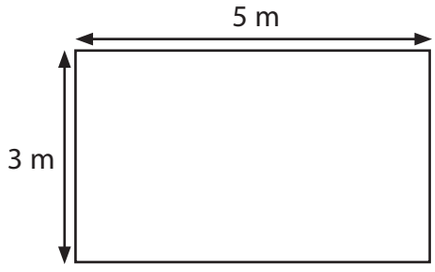

Diagram **not** accurately drawn

Mr Smith wants to put border fencing around the edge of the platform.
He can buy border fencing in lengths of 200 cm.

Mr Smith can cut and join the lengths of border fencing.
He thinks he needs 7 lengths of border fencing.

(b) Is Mr Smith correct?
Show why you think this. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Convert units to be consistent (cm to m):

- **Length of 1 border fencing section = 200 cm = 2 m [B1]**

  (100 cm = 1 m, so 200 ÷ 100 = 2 m).

Step 2: Calculate perimeter of the platform (5 m by 3 m):

- **Perimeter = 2 × (Length + Width) = 2 × (5 m + 3 m) = 2 × 8 m = 16 m [M1]**

Step 3: Calculate number of 2 m fencing lengths needed:

- **Number of lengths = 16 m ÷ 2 m = 8 lengths of fencing [M1]**
- Comparison: 7 lengths would only cover 7 × 2 m = 14 m (2 m short of 16 m).

Step 4: State final conclusion:

Therefore, No, Mr Smith is NOT correct (needs 8 lengths). [A1]

Mr Smith wants to fill the empty hot tub with water.
He will use 1350 litres of water.

Mr Smith fills up the hot tub with 18 litres of water every minute.

(c) How long will it take to fill the hot tub with 1350 litres of water?
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total filling time in minutes (Total Litres ÷ Rate):

- Total volume = 1350 litres; Flow rate = 18 litres per minute
- **Time = 1350 ÷ 18 = 75 minutes [M1]**

  Working: 1350 ÷ 9 = 150; 150 ÷ 2 = 75 minutes

Step 2: Convert minutes into hours and minutes:

- 60 minutes = 1 hour
- **75 mins = 60 mins + 15 mins = 1 hour 15 mins (or 1.25 hours).**

Final Answer with Units: [A1]

75 minutes (or 1 hour 15 minutes / 1.25 hours) [A1]

Use the box below to show your check.

☑

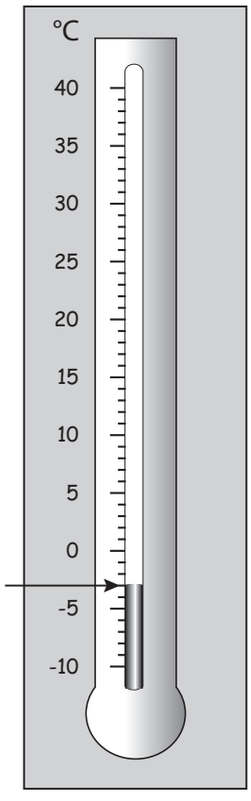

Reverse Calculation Check:

- **Reverse check: 75 mins × 18 litres/min = 1,350 litres [B1]**
- Breakdown: 75 × 10 = 750; 75 × 8 = 600; 750 + 600 = 1,350 litres (verified)
