# Mathematics

## Level 2

5 – 9 February 2018
**Time: 1 hour 30 minutes**

Paper Reference
**FSM02/01**

**You must have:**
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

**My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.**

**Signature:** Master Functional Skills (MFS)

## Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  *– there may be more space than you need.*
- **Calculators may be used.**

## Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  *– use this as a guide to how much time to spend on each question.*
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

## Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

# MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

## Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and healthcare & vocational staff. Everything you need to revise, practice, and pass is at your fingertips.

## 1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

## 2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

## 3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

## Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

**SECTION A: Adventure holiday**

**Answer all questions in this section.**

**Write your answers in the spaces provided.**

**1** Scott is the leader of a group on an adventure holiday to Morocco.

One night on the holiday the lowest temperature in the desert was –5°C.
The warmest temperature on that day was 16°C.

Scott wants to know the difference between these two temperatures.

Work out the difference between the two temperatures.
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

*Step 1: Identify warmest and lowest desert temperatures* *[M1 temps]*

**Warmest day temperature = 16°C**

**Lowest night temperature = –5°C**

*Step 2: Calculate the difference between the temperatures* *[M1 diff]*

**Difference = 16 – (–5) = 16 + 5 = 21°C**

*Alternative number line method:*

**From –5°C up to 0°C = 5°C; From 0°C up to 16°C = 16°C**

**Total difference = 5 + 16 = 21°C**

**Final Answer: 21°C** *[A1 answer]*

Use the box below to show your check.

☑

*Reverse calculation check:* *[B1 check]*

**21 – 5 = 16°C (returns warmest temperature)**

**Or: –5 + 21 = 16°C (verified correct)**

**(Total for Question 1 is 3 marks)**

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

**2** Scott withdraws 2000 Moroccan dirham from a cash machine in Morocco.

These are the charges that Scott has to pay.

- 2.75% of the cash he withdraws for changing currency.
- 3% of the cash he withdraws for using a cash machine in Morocco.

Scott has to pay both charges in British pounds.

1 British pound = 12.74 Moroccan dirham

What is the total of the charges in British pounds that Scott has to pay?

**(4)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate currency exchange charge (2.75% of 2000 MAD)* *[M1 charge 1]*

**Charge 1 = 2000 × 2.75% = 2000 × 0.0275 = 55 Moroccan dirham (MAD)**

*Step 2: Calculate ATM cash machine charge (3% of 2000 MAD)* *[M1 charge 2]*

**Charge 2 = 2000 × 3% = 2000 × 0.03 = 60 Moroccan dirham (MAD)**

*Step 3: Calculate total charges in Moroccan dirham (MAD)*

**Total charges = 55 + 60 = 115 MAD (or 5.75% of 2000 = 115 MAD)**

*Step 4: Convert total charges to British pounds (£1 = 12.74 MAD)* *[M1 convert]*

**Total charges (£) = 115 ÷ 12.74 = £9.02668... ≈ £9.03**

*Alternative method: Convert withdrawal first to £*

**2000 ÷ 12.74 = £156.98587...; Total % = 2.75% + 3% = 5.75%**

**£156.98587 × 0.0575 = £9.02668... ≈ £9.03**

*Final Answer with correct money notation:*

**Total Charges = £9.03 (or £9.02)** *[A1 answer]*

**(Total for Question 2 is 4 marks)**

**3** Scott has this information about the 18 people in the group.

| Gender | Age in years | Number of trips abroad |
|---|---|---|
| Female | 22 | 6 |
| Male | 38 | 12 |
| Female | 21 | 4 |
| Male | 32 | 8 |
| Female | 46 | 7 |
| Female | 18 | 3 |
| Male | 23 | 9 |
| Male | 28 | 9 |
| Female | 33 | 11 |
| Male | 36 | 15 |
| Male | 27 | 7 |
| Female | 17 | 2 |
| Male | 23 | 1 |
| Male | 25 | 6 |
| Female | 29 | 8 |
| Female | 29 | 10 |
| Male | 31 | 13 |
| Male | 24 | 7 |

Scott wants to use a data summary table to sort this information.

He is going to sort the people by

| | |
|---|---|
| Gender | male, female |
| Age | under 26, 26 and over |
| Trips abroad | fewer than 6, 6 or more. |

(a) Design and complete a data summary table for Scott.

**(5)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show your answer.

Scott's Group Summary Table (18 People Sorted by Gender, Age & Trips) [M3 design]

| Gender | Fewer than 6 trips | | 6 trips or more | | Total |
|---|---|---|---|---|---|
| | Under 26 | 26 & over | Under 26 | 26 & over | |
| Male | \| (tally) 1 | None 0 | \|\|\| (tally) 3 | \|\|\|\| \| 6 | 10 |
| Female | \|\|\| (tally) 3 | None 0 | \| (tally) 1 | \|\|\|\ 4 | 8 |
| Total | 4 | 0 | 4 | 10 | 18 |

[A2 completed]

Data Verification from List of 18 People:

- Male under 26 (<6 trips): 1 person (Age 23, 1 trip)
- Male under 26 (6+ trips): 3 people (Ages 23 [9], 25 [6], 24 [7])
- Male 26+ (<6 trips): 0 people
- Male 26+ (6+ trips): 6 people (Ages 38 [12], 32 [8], 28 [9], 36 [15], 27 [7], 31 [13])
- Female under 26 (<6 trips): 3 people (Ages 21 [4], 18 [3], 17 [2])
- Female under 26 (6+ trips): 1 person (Age 22 [6])
- Female 26+ (<6 trips): 0 people
- Female 26+ (6+ trips): 4 people (Ages 46 [7], 33 [11], 29 [8], 29 [10])

Total Sum Check: 1 + 0 + 3 + 6 + 3 + 0 + 1 + 4 = 18 people. (Complete & verified)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Abby, Belle and Zak are part of the group.
They are going to fly from Spain to Morocco.

The luggage charges for the flight are

- up to 23 kg free
- 12 euros for every kg over 23 kg up to 32 kg.

Any piece of luggage with a weight of over 32 kg is not allowed on the flight.

Abby has 21 kg of luggage.
Belle has 36 kg of luggage.
Zak has 30 kg of luggage.

They must take all of this luggage.

Abby, Belle and Zak can swap items between their luggage.
They need to know the total cost of taking all the luggage.

(b) Find the total cost of taking all the luggage.
State the weight of luggage each person has after the swap. **(4)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate total weight and excess baggage charges* *[M1 weight]*

Individual weights: Abby = 21 kg, Belle = 36 kg, Zak = 30 kg

Total luggage weight = 21 + 36 + 30 = 87 kg

Total free baggage allowance = 3 passengers × 23 kg = 69 kg

Total excess weight = 87 − 69 = 18 kg

*[A1 cost]*

Total excess baggage fee = 18 kg × 12 euros = 216 euros

*Step 2: Check airline luggage limits & redistribute weight* *[M1 swap]*

Rule: Any luggage over 32 kg is strictly NOT allowed on the flight.

Belle has 36 kg (exceeds 32 kg limit by 4 kg: 36 − 32 = 4 kg).

Swap: Belle transfers 4 kg from her luggage to Abby.

*Final luggage weights after swap (Option 1):*

- Abby: 21 + 4 = 25 kg (≤ 32 kg limit)
- Belle: 36 − 4 = 32 kg (≤ 32 kg limit)
- Zak: 30 kg (remains unchanged, ≤ 32 kg limit) *[A1 weights]*

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Q3(b) Continuation & Alternative Valid Redistributon:

**Alternative Option 2: Equal weight distribution**

**Total weight = 87 kg ÷ 3 passengers = 29 kg each**

- **Abby: 29 kg (transfers 8 kg from Belle)**
- **Belle: 29 kg (transfers 7 kg to Abby, 0 kg to Zak)**
- **Zak: 29 kg (transfers 1 kg to Abby)**

**All weights (29 kg) are strictly below the 32 kg maximum limit.**

Summary of Final Answers:

- **Total Cost of taking all luggage = 216 euros**
- **Weight after swap: Abby = 25 kg, Belle = 32 kg, Zak = 30 kg (or Abby = 29 kg, Belle = 29 kg, Zak = 29 kg)**

**(Total for Question 3 is 9 marks)**

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

**SECTION B : Coffee shops**

**Answer all questions in this section.**

**Write your answers in the spaces provided.**

**4** Enid owns some coffee shops.
Her coffee shops are open for 6 days each week.

Enid wants to find the average sales from each of her coffee shops.

The table gives information about sales of coffee from her coffee shop in London for one week.

| | Mon | Tue | Wed | Thu | Fri | Sat |
|---|---|---|---|---|---|---|
| **Number of cups of coffee sold** | 225 | 188 | 208 | 241 | 222 | 320 |

(a) Work out the average number of cups of coffee sold per day for Enid.
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate total number of cups of coffee sold in the week (6 days)* *[M1 sum]*

Daily sales: Mon = 225, Tue = 188, Wed = 208,
Thu = 241, Fri = 222, Sat = 320 cups

Total Sales = 225 + 188 + 208 + 241 + 222 + 320 = 1404 cups

*Step 2: Calculate mean average sales per day (Total ÷ 6)* *[M1 mean]*

Mean = 1404 ÷ 6 = 234 cups of coffee per day

*Alternative average (Median check):*

Ordered sales: 188, 208, 222, 225, 241, 320

Median = (222 + 225) ÷ 2 = 447 ÷ 2 = 223.5 cups

*Final Answer:*

Average sales per day = 234 cups (or median 223.5 cups) *[A1 answer]*

Use the box below to show your check.

☑

*Reverse multiplication check:* *[B1 check]*

**234 × 6 = 1404 cups (exactly matches weekly total sum)**

**Alternative check: 1404 − (225 + 188 + 208 + 241 + 222 + 320) = 0 (verified)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Enid wants to know how the number of sales vary in her coffee shops.
She uses this formula to measure how sales vary.

$$V = \frac{100R}{M}$$

R is the range of the sales
M is the mean of the sales
V is the measure of how sales vary (%)

The table gives information about sales of coffee from her coffee shop in Birmingham for one week.

| | Mon | Tue | Wed | Thu | Fri | Sat |
|---|---|---|---|---|---|---|
| **Number of cups of coffee sold** | 190 | 218 | 312 | 280 | 175 | 325 |

The mean number of cups sold in the Birmingham coffee shop is 250
Enid thinks that the value of V for this coffee shop is less than 50%.

(b) Is Enid correct?
Show why you think this. **(4)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate the range (R) of sales in Birmingham* *[M1 range]*

**Highest sales = 325 (Saturday), Lowest sales = 175 (Friday)**

**Range (R) = 325 − 175 = 150 cups**

*[M1 formula]*

*Step 2: Substitute R = 150 and Mean M = 250 into the formula V = (100 × R) ÷ M*

**V = (100 × 150) ÷ 250 = 15000 ÷ 250 = 60%**

*Alternative method: Working backwards from Enid's 50% threshold*

**If V = 50%, then required Range = (50 × 250) ÷ 100 = 125 cups.**

**Actual range is 150 cups, which is greater than 125 cups.**

*Step 3: Compare calculated V with Enid's statement (< 50%)*

**60% > 50% (the sales variation is 10% higher than Enid thought)**

**Conclusion: No, Enid is NOT correct.** *[A1 decision]*

**V = 60%, which is greater than 50% (60% > 50%).**

DO NOT WRITE IN THIS AREA

For her Derby coffee shop Enid uses the formula to work out the value of V using figures for

- one week of sales
- one month of sales.

(c) Which value of V is the more reliable?
Give a reason for your answer. **(1)**

Use the box below to show clearly your answer.

*Comparison of sample reliability:* *[B1 reason]*

**Selected Option: One month of sales is more reliable.**

*Detailed mathematical justification:*

- **Larger sample size: One month contains 4 to 5 times more data points than a single week, giving a far more representative picture of typical sales.**
- **Reduces impact of anomalies: A single week can be easily skewed by unusual weather, local events, or public holidays, whereas a month smooths out variations.**

DO NOT WRITE IN THIS AREA

**5** Enid wants to work out the profit one of her coffee shops makes from selling tea and coffee.

She knows that

- on a normal day the coffee shop sells 160 cups of tea
- 3 cups of coffee are sold for every 2 cups of tea sold
- the income from a cup of tea is £1.80
- the income from a cup of coffee is £2.20

The profit from the sale of tea and coffee is $\frac{1}{3}$ of the total income from the sales of cups of tea and cups of coffee.

Work out the total profit from the sales of cups of tea and cups of coffee on a normal day for Enid. **(5)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate number of cups of coffee sold using the ratio 3 : 2* *[M1 ratio]*

Ratio Coffee : Tea = 3 : 2. Tea sold = 160 cups (represents 2 parts)

1 part = 160 ÷ 2 = 80 cups

Coffee sold (3 parts) = 3 × 80 = 240 cups of coffee

*Step 2: Calculate total sales income from tea and coffee* *[M1 income]*

- Income from Tea = 160 cups × £1.80 = £288.00
- Income from Coffee = 240 cups × £2.20 = £528.00

Total Income = £288.00 + £528.00 = £816.00

*Step 3: Calculate profit (1/3 of total income)* *[M1 profit]*

Profit = 1/3 × £816.00 = £816.00 ÷ 3 = £272.00

*Alternative check by unit profit:*

Tea profit: £288 ÷ 3 = £96.00; Coffee profit: £528 ÷ 3 = £176.00

Total Profit = £96.00 + £176.00 = £272.00 (verified)

Final Answer: Total Profit = £272.00 *[A1 answer]*

## SECTION C : Building

**Answer all questions in this section.**

**Write your answers in the spaces provided.**

**7** Jose is a builder.
He is going to build a new garage.
The garage will be in the shape of a cuboid.

He has this drawing of the garage.

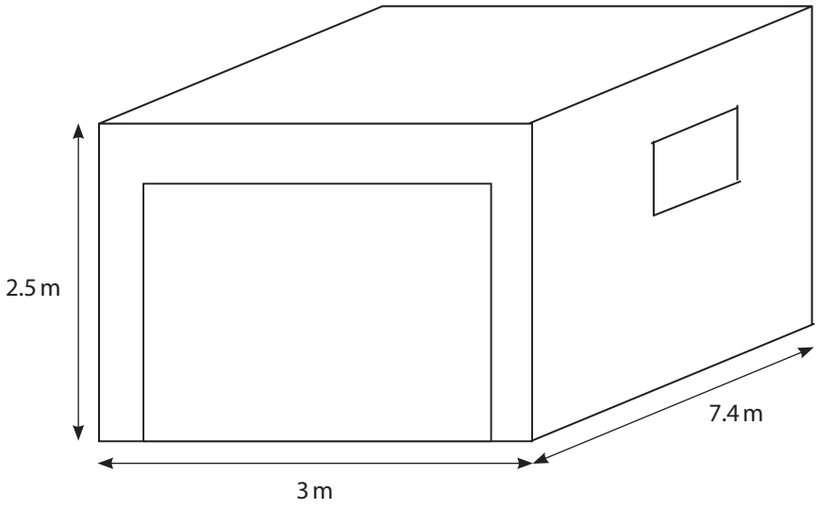

Diagram **not** accurately drawn

Jose decides that

- $\frac{3}{4}$ of the total area of the four sides of the garage will be made of bricks
- he will not use any bricks for the floor or the roof.

Jose knows 1 $m^2$ of brick wall needs 60 bricks.

He will buy the bricks in packs.
There are 360 bricks in each pack.

Jose thinks that 7 packs of bricks is enough for the garage.

(a) Is Jose correct?
Show why you think this. **(6)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Calculate total surface area of the four garage walls [M1 wall areas]

Dimensions: Length = 7.4 m, Width = 3.0 m, Height = 2.5 m

- 2 Long walls: 2 × (7.4 m × 2.5 m) = 2 × 18.5 m² = 37.0 m²
- 2 Short walls: 2 × (3.0 m × 2.5 m) = 2 × 7.5 m² = 15.0 m²

Total wall area = 37.0 + 15.0 = 52.0 m²

Step 2: Calculate brick area (3/4 of total wall area) [M1 3/4 area]

Brick wall area = 3/4 × 52.0 m² = 0.75 × 52.0 = 39.0 m²

Step 3: Calculate number of bricks needed (60 bricks per 1 $m^2$) [M1 bricks needed]

Bricks needed = 39.0 m² × 60 bricks/m² = 2,340 bricks

Step 4: Calculate bricks provided by Jose (7 packs of 360 bricks) [M1 Jose bricks]

Bricks ordered = 7 × 360 = 2,520 bricks

Step 5: Compare figures & conclude (packs needed vs ordered)

2,520 > 2,340 (Jose has ordered 180 extra bricks)

Alternative packs check: 2,340 ÷ 360 = 6.5 packs --> rounds up to 7 packs

Alternative area check: (7 × 360) ÷ 60 = 42 m²; 42 m² > 39 m²

[A1 decision]

Conclusion: Yes, Jose is correct (2520 bricks ordered > 2340 bricks needed).

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Jose has to make 1.7 tonnes of dry mortar for the garage.

He uses cement, sand and lime in the ratio 1 : 5 : 2 to make the dry mortar.

Jose wants to know how much lime he needs to make 1.7 tonnes of dry mortar.

(b) How much lime does Jose need?
Give your answer in tonnes correct to 2 decimal places.
Show a check of your working. **(3)**

Use the box below to show clearly how you get your answer.

*[M1 ratio]*

*Step 1: Calculate total parts in the mortar ratio (Cement : Sand : Lime = 1 : 5 : 2)*

**Total parts = 1 + 5 + 2 = 8 equal parts**

*Step 2: Calculate weight of one part for 1.7 tonnes of mortar*

**1 part = 1.7 tonnes ÷ 8 = 0.2125 tonnes**

*Step 3: Calculate weight of lime needed (2 parts)* *[M1 lime]*

**Lime weight = 2 × 0.2125 = 0.425 tonnes**

*Step 4: Round answer correct to 2 decimal places*

**0.425 rounds up to 0.43 tonnes (since the 3rd decimal digit is 5)**

*Individual ingredient breakdown for full understanding:*

**Cement (1 part) = 0.2125 t; Sand (5 parts) = 1.0625 t; Lime (2 parts) = 0.425 t**

**Final Answer: 0.43 tonnes of lime** *[A1 answer]*

Use the box below to show your check.

☑

*Reverse calculation check:* *[B1 check]*

**0.425 ÷ 2 × 8 = 0.2125 × 8 = 1.7 tonnes (returns total mortar)**

**Alternative check: 0.425 is 2/8 = 1/4 of total; 1.7 ÷ 4 = 0.425 t (verified)**

**8** Jose has to fit a concrete support in a house.

The support is in the shape of a cuboid, 3 m by 0.1 m by 0.2 m.

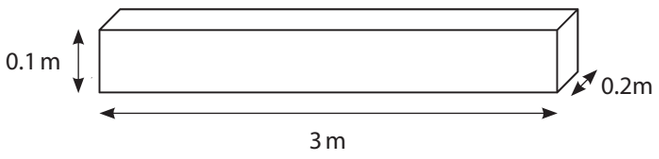

Diagram **not** accurately drawn

Jose wants to work out the weight of the support.

He knows that the weight of 1 $m^3$ of concrete is 2500 kg.

Jose thinks that the weight of the support will be about 150 kg.

Is Jose correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

*Step 1: Calculate volume of the cuboid support (L × W × H)* *[M1 volume]*

**Volume = 3 m × 0.2 m × 0.1 m = 0.06 $m^3$**

*Step 2: Calculate concrete weight (Volume × 2500 kg/$m^3$)* *[M1 weight]*

**Weight = 0.06 $m^3$ × 2500 kg/$m^3$ = 150 kg**

*Step 3: Compare with Jose's estimate (150 kg) & conclude* *[A1 decision]*

**Conclusion: Yes, Jose is correct (Calculated 150 kg = estimate 150 kg).**

The base will be a prism.
The cross section of the prism will be a hexagon.

The hexagon consists of 6 equilateral triangles.
Each side of the hexagon is of length 30 cm.

Jose wants to make a scale drawing of the hexagon.

He has already drawn one side of the hexagon.

(a) Give the scale that Jose has used.

**(1)**

Write your answer in the box below.

*Calculation of drawing scale:* *[B1 scale]*

- Length of drawn line in box opposite = 3 cm
- Actual real length of hexagon side = 30 cm
- Scale ratio = 3 cm : 30 cm = 1 cm : 10 cm (or 1 : 10)

Final Answer: 1 cm represents 10 cm (1 : 10)

(b) Complete the scale drawing of the hexagon.
Remember to use the line Jose has drawn.

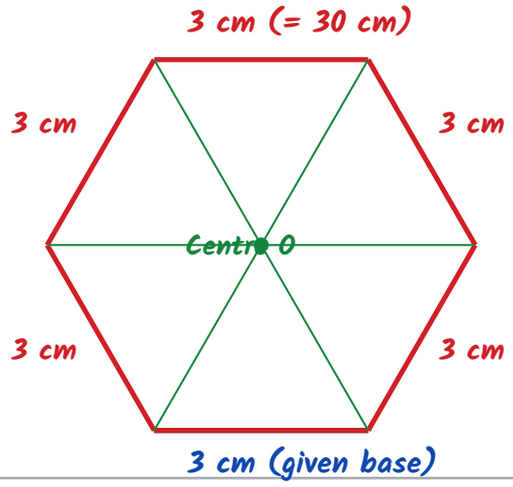

**(3)**

Use the box opposite to complete the scale drawing.

Scale Drawing: Regular Hexagon (Composed of 6 Equilateral Triangles) [M3 drawing]

- Scale: 1 cm on drawing represents 10 cm real statue base (1 : 10)
- Each side = 3 cm on drawing (85.0 pt = 30 cm real side length)
- Interior angle between adjacent sides = 120° (equilateral triangles angle = 60° at center)

[A1 complete]

**(Total for Question 9 is 4 marks)**

**TOTAL FOR PAPER IS 48 MARKS**

# MASTER FUNCTIONAL SKILLS STORE

## OFFICIAL REVISION GUIDES, WORKBOOKS & FLASHCARDS

Written by accredited specialist tutors to match the exact 2026 Pearson Edexcel standards

## Everything You Need To Revise, Practice & Pass Your Maths Level 2 Exam

Core Curriculum Manual

### Maths Level 2
### Core Study Guide

- Full official curriculum coverage
- Section A Non-Calc & Sec B Calc
- Worked models & golden rules
- Dyslexia-friendly visual format

Spiral Bound Print & PDF

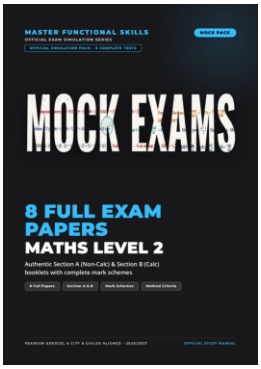

1,000+ Practice Drills

### Maths Level 2
### Companion Workbook

- 1,000+ exam-style questions
- Progressive difficulty drills
- Full worked step-by-step key
- Targeted fix for weak areas

Spiral Bound Print & PDF

Realistic Mock Papers

### Maths Level 2
### Official Mock Packs

- Full mock exam paper sets
- Authentic Pearson Edexcel style
- Detailed mark schemes included
- Grade boundaries & pass marks

Exam Booklet Pack & PDF

Pocket Flashcards A6

### Maths Level 2
### Pocket Revision Cards

- Compact A6 cards for quick study
- Essential formulas & conversions
- Dual-sided question & answer
- High-yield mental arithmetic rules

Boxed Card Deck & Print PDF
