1 (d) Tess puts the frame on the ground. She counts the number of plants in the frame.

Tess repeats this 12 times in different places on the field.

Here are her results:

4	**1**	**3**	**2**	**4**	**0**
0	**10**	**0**	**0**	**2**	**4**

Tess uses her results to calculate the mean number of plants per frame.

She then uses this rule to estimate the total number of plants in the field.

Q1(d) Worked Solution:

Mean number of plants per frame	×	The number of frames that will fit into the field	=	Estimate of total number of plants in the field

8000

Use Tess's data and the rule to estimate the total number of plants in the field.
