MFS-UK	FSM01/01

Mathematics

Level 1

12 – 16 June 2017
Time: 1 hour 30 minutes

Paper Reference
FSM01/01

You must have:
Pen, calculator, HB pencil, eraser, ruler graduated in cm and mm, protractor, compasses.

Total Marks
48 /48

My signature confirms that I will not discuss the content of the test with anyone until the end of the 5 day test window.

Signature: Master Functional Skills (MFS)

Instructions

- Use a **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – there may be more space than you need.
- **Calculators may be used.**

Information

- The total mark for this paper is 48.
- The marks for each question are shown in brackets
  – use this as a guide to how much time to spend on each question.
- **You must show clearly how you get your answers because marks will be awarded for your working out.**
- **Check your working and your answers at each stage.**
- **This sign shows where marks will be awarded for showing your check.**

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and NHS healthcare staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

SECTION A: Trip to Ireland

Answer all questions in this section.

Write your answers in the spaces provided.

1 Clive is planning a holiday to Ireland.
He will take a flight from Manchester to Cork.

The table shows information about the flights from Manchester to Cork.

date	departure time	arrival time	ticket price
13 Jul	09:05	10:40	£104.99
	16:55	18:25	£116.99
	20:55	22:25	£79.99
14 Jul	09:05	10:40	£124.99
	20:55	22:25	£89.99
15 Jul	09:05	10:40	£85.99
	16:55	18:25	£129.99
	20:55	22:25	£114.99
16 Jul	09:05	10:40	£104.99
	20:55	22:25	£79.99

Clive wants the flight to have a departure time after 6 pm and to be on 14 July or 15 July.

He wants to pay the least amount possible for his ticket to Cork.

(a) Which flight should Clive take?
Write the date and the departure time of this flight. **(2)**

Use the box below to write your answer.

Step 1: Identify flights on 14 July or 15 July departing after 6 pm (18:00):

- *14 July: 20:55 departure (arrives 22:25) -> ticket price = £89.99*
- *15 July: 20:55 departure (arrives 22:25) -> ticket price = £114.99*

Step 2: Compare prices to find the cheapest flight:

- *£89.99 < £114.99 (saving £25.00 by choosing 14 July). [M1]*

Final Answer:

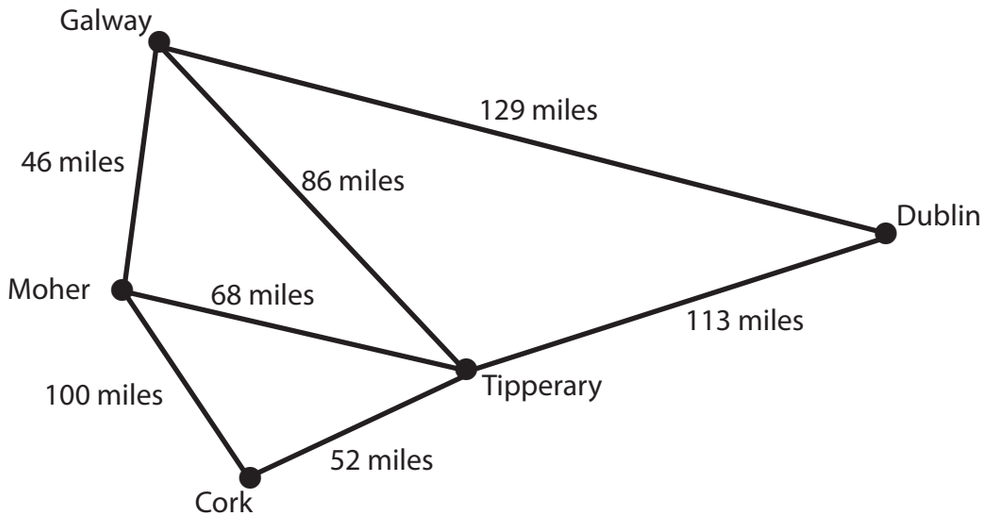

Date: 14 July, Departure time: 20:55 (Price: £89.99) [A1]

Clive is planning a trip from Cork to Dublin.
He will stop in Tipperary, Galway and Moher on his way to Dublin.

Clive does not mind in which order he stops at each of the three places.

He draws this sketch of the places and the distances between them.

Clive wants to plan a route for his trip.

(b) Plan the route for Clive.
What is the total distance of this route? **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Plan a valid route visiting Tipperary, Moher, and Galway:

- ***Route: Cork -> Tipperary -> Moher -> Galway -> Dublin***

(Visits all three intermediate places exactly once before reaching Dublin).

Step 2: Sum the segment distances from the map:

- *Cork to Tipperary: 52 miles; Tipperary to Moher: 68 miles*
- *Moher to Galway: 46 miles; Galway to Dublin: 129 miles [M1]*

Step 3: Calculate the total distance:

Total = 52 + 68 + 46 + 129 = 295 miles [M1]

Alternative valid route: Cork -> Moher (100) -> Galway (46) -> Tipperary (86) -> Dublin (113) = 345 miles.

Final Answer:

Route: Cork -> Tipperary -> Moher -> Galway -> Dublin

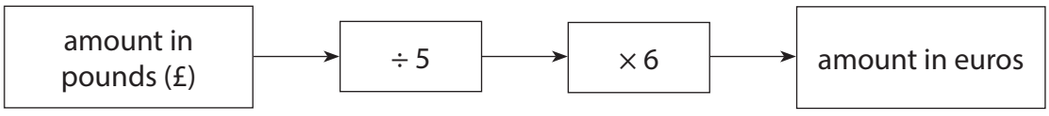

Total distance = 295 miles [A1]

(Total for Question 1 is 5 marks)

2 One litre of petrol in the UK costs £1.15
One litre of petrol in Ireland costs 1.32 euros.

Clive knows this rule to convert pounds into euros.

He thinks that one litre of petrol in the UK costs more than one litre of petrol in Ireland.

Is Clive correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Convert UK petrol price (£1.15 per litre) into euros using the rule:

Rule: amount in pounds (£) ÷ 5 × 6 = amount in euros

- ***£1.15 ÷ 5 = 0.23 [M1]***
- ***0.23 × 6 = €1.38 (euros per litre in UK) [M1]***

Step 2: Compare UK price with Ireland price (€1.32 per litre):

- ***€1.38 (UK) > €1.32 (Ireland)***
- *Difference = €1.38 − €1.32 = €0.06 per litre more expensive in the UK.*
  (Alternative check: €1.32 ÷ 6 = 0.22; 0.22 × 5 = £1.10; £1.15 > £1.10).

Final Conclusion:

Yes, Clive is correct.

1 L in UK is €1.38, which is more than €1.32 in Ireland. [A1]

(Total for Question 2 is 3 marks)

DO NOT WRITE IN THIS AREA

3 Clive plans to walk with a friend along the Cliffs of Moher.

Clive wants to carry a total of at least 3 litres of liquid to drink on the walk.

He has

2 large bottles of water (750 ml each)
2 small bottles of water (500 ml each)
2 cans of soft drink (330 ml each).

(a) Does Clive have a total of at least 3 litres of liquid?

(4)

Use the box below to show clearly how you get your answer.

Step 1: State target volume in consistent units:

- *Target = at least 3 litres = 3 × 1000 ml = 3000 ml [B1]*

Step 2: Calculate volume for each type of drink Clive has:

- *2 large bottles of water: 2 × 750 ml = 1500 ml [M1]*
- *2 small bottles of water: 2 × 500 ml = 1000 ml*
- *2 cans of soft drink: 2 × 330 ml = 660 ml*

Step 3: Calculate total volume of liquid carried:

Total liquid = 1500 + 1000 + 660 = 3160 ml [M1]

In litres: 3160 ÷ 1000 = 3.16 litres

Step 4: Compare total liquid with 3 litres requirement:

- *3160 ml > 3000 ml (3.16 litres > 3.0 litres)*
- *Clive has 3160 − 3000 = 160 ml extra liquid (surplus).*

Final Conclusion:

Yes, Clive has at least 3 litres of liquid

(he has 3160 ml / 3.16 L, which is 160 ml over 3 L). [A1]

There is a footpath along the Cliffs of Moher.
The length of the footpath is 24 km.

Clive and his friend walk a distance of 16 km along the footpath.

Clive says

> We have walked three quarters of the length of the footpath.

(b) Is three quarters of the length of the footpath 16 km?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate three quarters (3/4) of the 24 km footpath:

- **Find 1/4 of 24 km: 24 ÷ 4 = 6 km [M1]**
- **Find 3/4 of 24 km: 6 × 3 = 18 km [M1]**

(Working: 3/4 × 24 = (3 × 24) ÷ 4 = 72 ÷ 4 = 18 km)

Step 2: Compare 3/4 of the footpath (18 km) with distance walked (16 km):

- **18 km ≠ 16 km (16 km is 2 km short of three quarters).**
- Fraction actually walked: 16/24 = 2/3 ≈ 0.67 (66.7%).
- Target fraction: 3/4 = 0.75 (75%). Since 0.67 < 0.75, they walked 2/3, not 3/4.

Final Conclusion:

No, three quarters of the length is 18 km, not 16 km. [A1]

DO NOT WRITE IN THIS AREA

SECTION B: Cycle to work

Answer all questions in this section.

Write your answers in the spaces provided.

4 Teri works for a company.
The managers of the company want to introduce a Cycle To Work scheme.

Teri must design a data summary sheet to show some information about the employees.

The sheet must show

- the department where each employee works
  sales (S), finance (F), human resources (HR)
- whether each employee wants to join the scheme (yes or no)
- the total number of employees who want to join the scheme
- the total number of employees who do not want to join the scheme.

Teri has collected this information.

Abi,	HR,	yes
June,	HR,	no
Bob,	S,	yes
Kam,	S,	yes
Des,	F,	no
Shirley,	S,	yes
Mick,	S,	yes
Katie,	F,	no

(a) Design a data summary sheet for Teri.
Fill in the sheet using the information Teri has collected. **(5)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

Use the box below to show clearly your completed data summary sheet.

Cycle To Work Scheme — Data Summary Sheet:

Two-way summary table with tally input opportunities and departmental totals [MI MI MI AI AI]

Department	Join Scheme (Yes)	Do Not Join (No)	Total
Sales (S) (Bob, Kam, Shirley, Mick)	|||| (4)	0	4
Finance (F) (Des, Katie)	0	|| (2)	2
Human Resources (HR) (Abi, June)	| (1)	| (1)	2
Overall Total	5	3	8

Summary Table Criteria Fulfilled: [MI MI MI AI AI]

- Two-way layout: rows represent departments (S, F, HR); columns represent decision (Yes, No).
- Distinct input opportunities: dedicated cells for recording tally marks and frequency numbers.
- Accurate counts: 5 want to join (4 Sales + 1 HR); 3 do not want to join (2 Finance + 1 HR).
- Marginal and grand totals: row totals (4, 2, 2) and column totals (5, 3) both sum to 8.

Teri is buying an electric bike through the Cycle To Work scheme.

She has to pay

£750 when she gets her bike and
12 monthly instalments of £56.85

(b) How much will Teri pay in total?
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total cost of the 12 monthly instalments:

- *12 monthly payments of £56.85*
- ***12 × £56.85 = £682.20 [M1]***

  Working: 10 × £56.85 = £568.50; 2 × £56.85 = £113.70
  Total instalments = £568.50 + £113.70 = £682.20

Step 2: Add the initial payment (£750):

- *Initial payment when receiving bike = £750.00*
- ***Total paid = £750.00 + £682.20 = £1432.20 [M1]***

Final Answer:

Total paid = £1432.20 (in correct money notation) [A1]

Use the box below to show your check.

☑

Reverse Calculation Check: [B1]

- *Subtract initial deposit: £1432.20 − £750.00 = £682.20*
- *Divide by 12 months: £682.20 ÷ 12 = £56.85 (matches monthly instalment).*
- *Estimation check: £750 + 12 × £60 = £750 + £720 = £1470 ≈ £1432.20.*

5 Teri wants to use her bike to cycle to work.
The journey to work is 18 miles.

Teri thinks it will take 4 minutes to cycle each mile of this journey.

She thinks it will take her one and a quarter hours to cycle the 18 miles to work.

Is Teri correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total time taken to cycle 18 miles:

- Distance = 18 miles; Rate = 4 minutes per mile
- **Total cycling time = 18 × 4 = 72 minutes [M1]**

  In hours and minutes: 72 mins = 60 mins + 12 mins = 1 hour 12 minutes.

Step 2: Convert Teri's estimated time (1 1/4 hours) into minutes:

- 1 hour = 60 minutes
- 1/4 hour = 60 ÷ 4 = 15 minutes
- **1 1/4 hours = 60 + 15 = 75 minutes (1 hour 15 minutes) [M1]**

Step 3: Compare actual cycling time with Teri's estimate:

- **72 minutes < 75 minutes (1 hour 12 mins < 1 hour 15 mins)**
- Difference = 75 − 72 = 3 minutes less than Teri estimated.

  (Alternative distance rate check: 75 mins ÷ 4 mins/mile = 18.75 miles > 18 miles).

Final Conclusion:

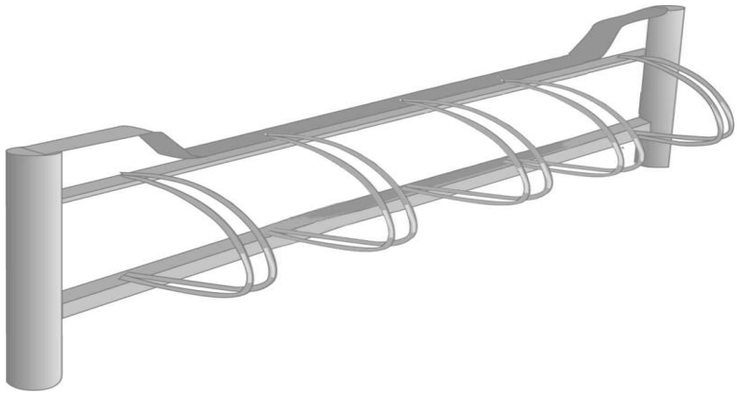

No, Teri is not correct (it will take 72 minutes / 1 hour 12 mins, which is 3 minutes less than 1 1/4 hours / 75 minutes). [A1]

(Total for Question 5 is 3 marks)

6 Teri has a space where employees can park their bikes.

She needs to choose a type of bike rack for this space.

The table shows information about the different bike racks.

bike rack type	maximum number of bikes	length (cm)	width (cm)	fixing
A	3	100	50	ground
B	4	150	50	ground
C	5	200	50	ground
D	5	200	50	wall
E	6	300	50	ground
F	6	300	50	wall
G	7	350	50	wall

Each bike rack needs to

- be for at least 5 bikes
- have a ground fixing.

(a) Choose a type of bike rack for Teri. **(1)**

Use the box below to show clearly your answer.

Evaluate requirements from the table: [B1]

- *Condition 1: Must have a ground fixing -> Types A, B, C, E.*
- *Condition 2: Must be for at least 5 bikes -> Types C (5 bikes) or E (6 bikes).*

Chosen Bike Rack: Type C (or Type E) [B1]

DO NOT WRITE IN THIS AREA

Teri wants to put one row of bike racks along a wall.
She will use only one type of bike rack.
Teri will use the type of bike rack chosen in part (a).

Each bike rack will need a rectangular space of the length and width shown in the table on the previous page.

Bike racks will be joined along their shortest sides.

(b) Draw the bike racks on the scaled grid below for Teri.

(3)

Key 1 square side represents 50 cm

wall

You may use the box to show any working.

Bike Rack Layout & Scale Calculations: [M1 M1 A1]

- *Scale: 1 square = 50 cm.*
- *Type C rack dimensions: Length = 200 cm = 4 squares; Width = 50 cm = 1 square.*
- *Wall arrangement: 1 row placed along the wall, joined at shortest sides (1 square).*
- ***Capacity along 21-square wall: 21 ÷ 4 = 5 racks (with 1 square spare space).***

  5 racks × 4 squares = 20 squares (10 metres) along the wall.
- ***Total parking capacity: 5 racks × 5 bikes per rack = 25 bikes.***

(If Type E chosen: 3 racks of 6 squares by 1 square along wall = 18 squares, 18 bikes).

SECTION C: The farm

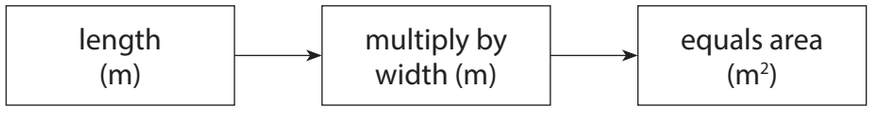

Answer all questions in this section.

Write your answers in the spaces provided.

7 Jim is a farmer.
He plans to keep sheep on his land.

The land is rectangular with length 250 m and width 200 m.

He has this rule to find the area of the land.

Jim knows that each sheep needs an area of 800 m^2 of land.
He works out that he can keep 70 sheep on his land.

Is Jim correct?
Show why you think this. **(3)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate the total area of the rectangular land:

Rule: length (m) × width (m) = area (m^2)

- *Area = 250 m × 200 m = 50,000 m^2 [M1]*

Step 2: Calculate how many sheep can be kept on 50,000 m^2:

- *Each sheep requires 800 m^2 of land*
- *Number of sheep = 50,000 ÷ 800 = 62.5 sheep [M1]*

Working: 500 ÷ 8 = 62.5 -> Maximum whole sheep = 62 sheep.

Step 3: Compare with Jim's plan of keeping 70 sheep:

- *62.5 < 70 (Jim can only keep 62 sheep, not 70).*
- *Alternative area check: 70 sheep × 800 m^2 = 56,000 m^2 needed.*

56,000 m^2 > 50,000 m^2 (Jim would need 6,000 m^2 more land).

Final Conclusion:

No, Jim is not correct.

The land fits 62 sheep (or 70 sheep need 56,000 m^2). [A1]

(Total for Question 7 is 3 marks)

DO NOT WRITE IN THIS AREA

8 Lambs are usually born in the first 4 weeks of April.

Jim records the number of lambs born each week on his farm in April.

week	1	2	3	4
number of lambs born	23	45	33	9

Jim thinks the mean number of lambs born each week in the first 4 weeks of April is 26

(a) Is Jim correct?
Show why you think this.
Show a check of your working. **(4)**

Use the box below to show clearly how you get your answer.

Step 1: Calculate total number of lambs born in the 4 weeks:

- ***Total = 23 + 45 + 33 + 9 = 110 lambs [M1]***

Working: 23 + 45 = 68; 68 + 33 = 101; 101 + 9 = 110

Step 2: Calculate the mean number of lambs per week:

- *Mean = Total lambs ÷ Number of weeks*
- ***Mean = 110 ÷ 4 = 27.5 lambs per week [M1]***

Step 3: Compare actual mean with Jim's estimate (26 lambs):

- ***27.5 ≠ 26 (The actual mean is 27.5, which is 1.5 higher than 26).***
- *Alternative total check: 26 × 4 = 104 lambs ≠ 110 lambs.*

Final Conclusion:

No, Jim is not correct (the mean is 27.5 lambs, not 26). [A1]

Use the box below to show your check.

☑

Reverse Calculation Check: [B1]

- *Reverse mean calculation: 27.5 × 4 = 110 lambs*
- *Subtract weekly counts: 110 − 9 − 33 − 45 = 23 (matches Week 1 count).*
- *Target comparison: 26 × 4 = 104 lambs < 110 lambs (proves mean > 26).*

9 Jim needs to buy bales of hay for the sheep.

Jim sees these two offers.
The bales of hay in both offers are the same size and weight.

Hay Farm	**Farming Supplies**
bales of hay	15 bales of hay
£6.30 each	normal price £88
For every 5 bales you buy, get an extra bale for free	Sale! Pay 70% of the normal price

Jim is going to buy 30 bales of hay.
He wants to pay the least amount of money.

Which offer should Jim choose?
How much will Jim pay in total? **(6)**

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Use the box below to show clearly how you get your answer.

Step 1: Calculate total cost at Farming Supplies (30 bales):

- **Sold in packs of 15 bales: 30 bales ÷ 15 = 2 packs needed [M1]**
- Normal price for 2 packs: 2 × £88 = £176.00
- Sale discount: Pay 70% of normal price
- **Total cost = £176.00 × 0.70 = £123.20 [M1]**

  Working: 10% of £176 = £17.60; 70% = 7 × £17.60 = £123.20

  (or per pack: £88 × 0.70 = £61.60; 2 × £61.60 = £123.20)

Step 2: Calculate total cost at Hay Farm (30 bales):

- Special offer: "Buy 5 bales, get 1 extra bale free"

  Each group gives 5 + 1 = 6 bales for the price of 5 bales.
- **Number of 6-bale groups needed: 30 ÷ 6 = 5 groups [M1]**
- **Number of bales paid for = 5 groups × 5 bales = 25 bales paid [M1]**

  (Jim receives 25 paid bales + 5 free bales = 30 bales total).
- **Total cost = 25 bales × £6.30 = £157.50 [M1]**

  Working: 20 × £6.30 = £126.00; 5 × £6.30 = £31.50; £126.00 + £31.50 = £157.50

Step 3: Compare both offers to find the least amount of money:

- **Farming Supplies = £123.20; Hay Farm = £157.50**
- **£123.20 < £157.50 (Farming Supplies is £157.50 − £123.20 = £34.30 cheaper).**

Final Answers: [A1 A1]

- **Which offer should Jim choose? Farming Supplies [A1]**
- **How much will Jim pay in total?**

  £123.20 (in correct money notation) [A1]

(Total for Question 9 is 6 marks)
