Centre Number	Candidate Number
MFS-UK	L2-PR02

Practice Set 2

Time: 25 minutes | Paper Reference **PRACL2/N02**

Mathematics

Level 2
Section A (Non – Calculator)

You must have:
Pen, HB pencil, eraser, ruler graduated in cm and mm, protractor, pair of compasses. Tracing paper may be used.

Total Marks: 16 /16

My signature confirms that I will not discuss the content of the test with anyone.

Signature: Master Functional Skills (MFS)

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Sign the declaration.
- Answer **all** questions.
- Write your final answers in the boxes provided.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You **must** show clearly how you get your answers in the spaces provided. Marks will be awarded for your working out.
- Check your working and answers at each stage.
- Diagrams are **not** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**
- Take the value of π to be 3.14

Information

- The total mark for this section is 16.
- The marks for **each** question are shown in brackets.
  – *use this as a guide as to how much time to spend on each question.*
- This sign ☑ shows where marks will be awarded for showing your checks.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

MASTER FUNCTIONAL SKILLS

ONLINE LEARNING PLATFORM & ACCREDITED COURSES

Pearson Edexcel & Open Awards Accredited Suite · Entry 3, Level 1 & Level 2

Pass Your Functional Skills Exams With Confidence

100% Pass Guarantee | Dyslexia-Friendly Learning | 1-to-1 Expert Tutor Support

Master Functional Skills provides an adaptive, dyslexia-friendly online learning platform tailored for adult learners, apprentices, and NHS healthcare staff. Everything you need to revise, practice, and pass is at your fingertips.

1. Smart Diagnostic Initial Assessment

Calculate your exact working level and pinpoint knowledge gaps instantly

- **Exact Grade Calculation:** Adaptive assessments calculate your exact level across all topics.
- **Personalised Study Pathway:** Skip what you know; focus 100% on the topics needed to pass.
- **Real-Time Exam Readiness:** Predictive tracker confirms when you are 100% ready to book.

2. Comprehensive Video Lessons & Worked Solutions

Bite-sized visual explainers covering every single Maths & English curriculum standard

- **Step-by-Step Video Lessons:** Master percentages, algebra, perimeter, ratio, and reverse fractions.
- **Multi-Ink Handwriting Models:** Visual 3-colour methods showing working, carries, and examiner tips.
- **Tutor Shortcuts & Golden Rules:** Proven non-calculator mental arithmetic hacks and BIDMAS tricks.

3. Full Mock Exams & Real-Time Performance Analytics

Practice in exam conditions and watch your scores and confidence climb

- **Authentic Exam Papers:** Timed Section A & Section B papers formatted exactly like Pearson Edexcel.
- **Instant Topic Breakdown:** View percentage scores across Number, Measure/Shape, and Data.
- **Historical Score Tracking:** Monitor past attempts to ensure continuous improvement before exam day.

Ready to Master Your Functional Skills & Pass First Time?

Join thousands of healthcare staff, apprentices, and adult learners across the UK.

Instant 24/7 access on desktop, tablet, and mobile with no software to install.

START LEARNING TODAY AT

MasterFunctionalSkills.co.uk

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

SECTION A

Answer ALL questions. Write your answers in the spaces provided.

1

(a) Work out $700 - 7^2$

(2)

BIDMAS rule: Calculate powers/indices before subtraction

$7^2 = 7 \times 7 = 49$ [M1]

$700 - 49 = 651$

651 [A1]

Here is a list of numbers.

29 31 46 43 29 31 38 34 43 35 43

(b) Write down the mode of these numbers.

(1)

Tally frequency of each number in the list:

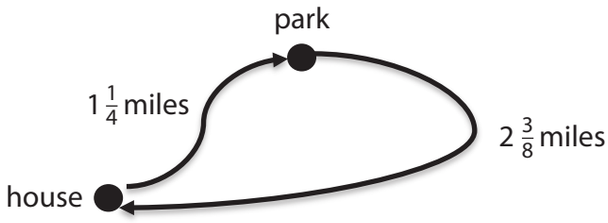

29 (2x), 31 (2x), 34 (1x), 35 (1x), 38 (1x)
43 (3x), 46 (1x)

43 appears most frequently (3 times), so mode = 43.

43 [A1]

(Total for Question 1 is 3 marks)

2 Ola will run from her house to a local park and back to her house.
She sees this sketch of the route she will take.

What is the total distance of the route Ola will run?
Give your answer as a mixed number.

You **must** show your working.

(3)

Step 1: Write down the route distances to add

Total Distance = 1 1/4 + 2 3/8 miles

Step 2: Convert fractional parts to a common denominator (eighths)

1/4 = (1 × 2) / (4 × 2) = 2/8 *[M1 common denom]*

Step 3: Add whole numbers and fractions together

Whole numbers: 1 + 2 = 3 **[M1]**

Fractions: 2/8 + 3/8 = 5/8

Total Distance = 3 5/8 miles

3 5/8 **[A1]**

miles

DO NOT WRITE IN THIS AREA

3 Saima is making a filling for a cake.

Saima mixes jam, sugar and soft cheese in the ratio 4 : 1 : 16

She uses 32 oz of soft cheese.

Saima knows that 1 oz is 28.3 grams.

(a) How many grams of jam does Saima need?

(3)

Step 1: Find 1 ratio part using soft cheese (16 parts = 32 oz)

1 part = 32 oz ÷ 16 = 2 oz **[M1]**

Step 2: Calculate ounces of jam (4 parts)

Jam = 4 × 2 oz = 8 oz

Step 3: Convert ounces to grams (1 oz = 28.3 g)

Grams of jam = 8 × 28.3 g = 226.4 g **[M1]**

226.4 **[A1]**

g

☑ (b) Use estimation to show a check of your answer.

(1)

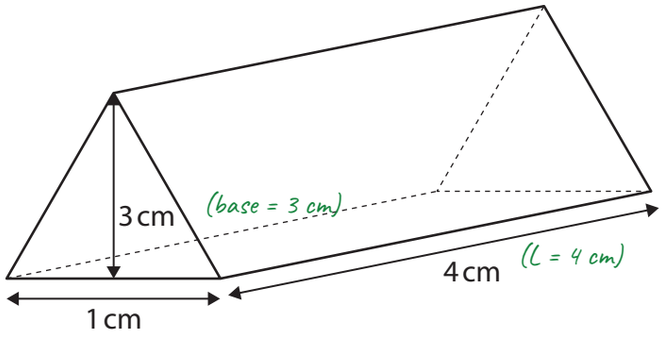

Estimation check (round 28.3 g to 1 s.f. = 30 g):

Check: 8 oz × 30 g = 240 g **[A1]**

240 g is close to 226.4 g, confirming our answer is reasonable. ☑

(Total for Question 3 is 4 marks)

4 Jack is a jeweller.
He makes a pendant in the shape of a triangular prism as shown in the diagram.

Jack makes the pendant from solid gold.

He uses this formula.

$V = TL$

where V = volume of a triangular prism (cm^3)
T = area of the triangular face (cm^2)
L = length of the prism (cm)

Jack knows that

- mass = density × volume
- the density of gold is 19 grams per cm^3
- the cost of 1 gram of gold is £40

Jack sells the pendant for £382 more than the total cost of the gold needed to make the pendant.

How much does Jack sell the pendant for?

(6)

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Step 1: Calculate area of triangular face (T)

$T = (\text{base} \times \text{height}) \div 2 = (3 \times 1) \div 2 = 1.5\ cm^2$ [M1]

Step 2: Calculate volume of prism (V = TL)

$V = 1.5\ cm^2 \times 4\ cm = 6\ cm^3$ [M1]

Step 3: Calculate mass of gold (mass = density × volume)

$\text{Mass} = 19\ g/cm^3 \times 6\ cm^3 = 114\ g$ [M1]

Step 4: Calculate total cost of the gold (£40 per gram)

$\text{Cost of gold} = 114\ g \times £40 = £4,560$ [M1]

Step 5: Calculate selling price (£382 more than gold cost)

Selling Price = Cost of Gold + £382 [M1]

$\text{Selling Price} = £4,560 + £382 = £4,942$

£ 4942 [A1]

(Total for Question 4 is 6 marks)

1/1/1/1/1/1

S 6 8 2 1 5 A 0 1 2 0

Pearson

SECTION B

Answer ALL questions. Write your answers in the spaces provided.

1 Luke plays a computer game where he manages a city.
He buys two buildings.

Luke receives

- 135 coins every 8 hours from building A
- 36 coins every 15 minutes from building B.

Luke thinks he receives a total of 4000 coins in 24 hours from these buildings.

Is Luke correct?
Show why you think this.

(3)

Step 1: Calculate coins from Building A in 24 hours (135 coins every 8 hours)

Number of 8-hour periods = 24 ÷ 8 = 3 periods

Building A Coins = 3 × 135 = 405 coins

Step 2: Calculate coins from Building B in 24 hours (36 coins every 15 mins)

Periods per hour = 60 ÷ 15 = 4 periods

Coins per hour = 4 × 36 = 144 coins

Building B = 24 hours × 144 = 3,456 coins [A1 buildings]

Step 3: Calculate total coins received in 24 hours

Total Coins = 405 + 3,456 = 3,861 coins [M1]

Step 4: Compare with 4,000 coins needed

3,861 < 4,000 (short by 4,000 − 3,861 = 139 coins)

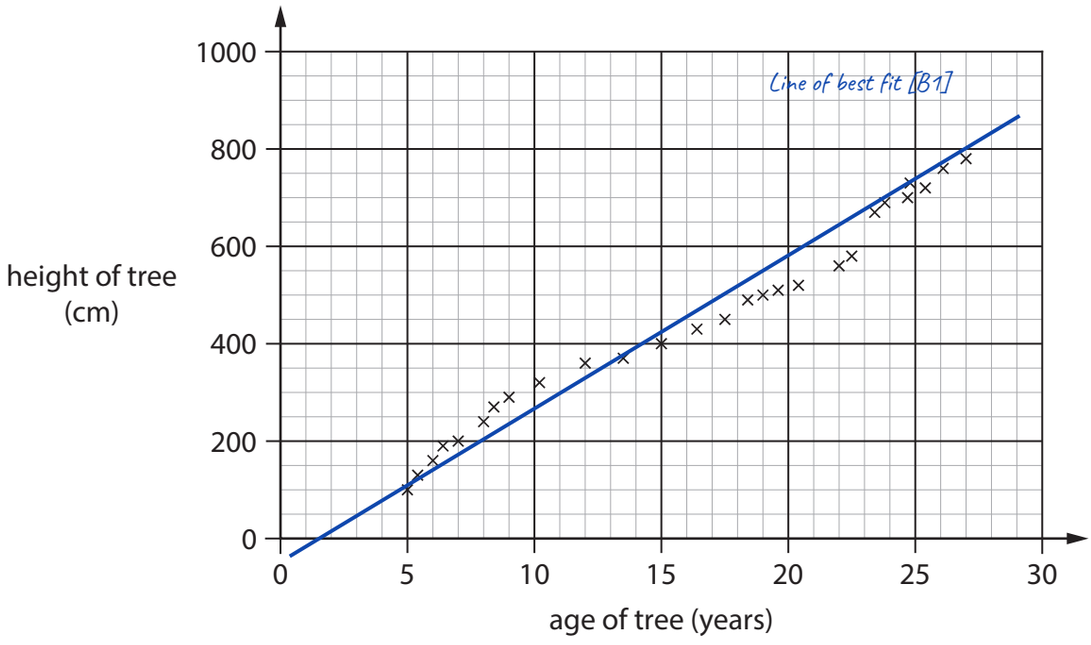

Therefore, Luke will NOT have enough coins.

No, receives 3,861 coins (< 4,000) [A1]

(Total for Question 1 is 3 marks)

4 Sasha is the manager at a factory.
Last weekend 15 employees assembled 390 identical wardrobes.

Sasha wants 1200 of these wardrobes to be assembled next weekend.

How many employees does Sasha need next weekend?
You **must** show your working.

(3)

Step 1: Calculate assembly rate per employee

Rate = 390 ÷ 15 = 26 wardrobes per employee [M1]

Step 2: Calculate number of employees needed for 1,200 wardrobes

Employees needed = 1,200 ÷ 26 = 46.15... [M1]

Step 3: Round up to a whole number of employees

46 employees assemble 46 × 26 = 1,196 wardrobes (not enough!).

Round up: 47 employees needed.

Alternative scaling method check:

- **Scale multiplier = 1,200 ÷ 390 = 3.0769...**
- **Employees = 15 × 3.0769... = 46.15... --> 47 employees** □

47 [A1]

employees

5 Vera is a shop manager.

She has this information about the income in her shop for eight weeks this year.

Week	1	2	3	4	5	6	7	8
Income (thousands of £)	53.5	42.3	39.8	45.1	52.4	19.4	47.9	42.5

The median income for the same eight weeks last year was £49 300

Vera knows that the median income for these eight weeks has decreased this year compared to last year.

(a) Work out the percentage decrease of the median income.

Give your answer to 2 decimal places.

(4)

Step 1: Order the 8 weekly incomes in ascending order

19.4, 39.8, 42.3, 42.5, 45.1, 47.9, 52.4, 53.5

Step 2: Calculate the median (middle two values: 4th and 5th)

Median = (42.5 + 45.1) ÷ 2 = 43.8 (£43 800) [M1 median]

Step 3: Calculate decrease from last year's median (£49.3k)

Decrease = 49.3 − 43.8 = 5.5 thousand [M1]

Step 4: Calculate percentage decrease and round to 2 d.p.

Decrease = (5.5 ÷ 49.3) × 100 = 11.156...% [M1]

To 2 decimal places = 11.16%

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA DO NOT WRITE IN THIS AREA

11.16 [A1]

%

(b) Show a check of your calculation for the median.

(1)

Reverse check for the median calculation:

Check: 43.8 × 2 = 87.6 [A1]

And: 87.6 − 45.1 = 42.5 ☐

Or approximation: (40 + 50) ÷ 2 = 45 ≈ 43.8 ☒

(Total for Question 5 is 5 marks)

6 Carlos invests £4500 for 3 years.
He receives compound interest of 1.5% per year.

Carlos thinks the total of the money he invests and the interest will be more than £4750 at the end of the 3 years.

Is he correct?
Show why you think this.

(3)

Step 1: Write down the compound interest multiplier

Annual Multiplier = 1 + (1.5 / 100) = 1.015 *[M1 multiplier]*

Step 2: Calculate year-by-year value

- **Year 1: £4,500 × 1.015 = £4,567.50**
- **Year 2: £4,567.50 × 1.015 = £4,636.0125** **[M1]**
- **Year 3: £4,636.01 × 1.015 = £4,705.55**

Formula check: £4,500 × $(1.015)^3$ = £4,500 × 1.045678 = £4,705.55

Step 3: Compare with Carlos's prediction (£4,750)

£4,705.55 < £4,750 (short by £44.45)

Therefore, Carlos is NOT correct.

No, total is £4,705.55 (< £4,750) **[A1]**

8 Jessie needs to cover a wooden floor with varnish.

The floor is in the shape of a rectangle and a quarter circle.

A tin of varnish

- covers 6 m^2
- costs £5.41

Jessie has £25 to buy the tins of varnish she needs to cover this wooden floor.

Is £25 enough to buy all the tins of varnish Jessie needs?

(6)

Step 1: Calculate area of the rectangular section

Rectangle Area = 5.3 m × 2.6 m = 13.78 m^2 [M1]

Step 2: Calculate area of the quarter circle (r = 2.6 m)

Full circle area = π × r^2 = π × 2.6^2 = 21.237... m^2 [M1]

Quarter circle area = 21.237... ÷ 4 = 5.309... m^2

Step 3: Calculate total floor area

Total Area = 13.78 + 5.309... = 19.089... m^2 [M1]

DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA
DO NOT WRITE IN THIS AREA

Step 4: Calculate number of tins needed (each covers 6 m^2)

Tins needed = 19.089... ÷ 6 = 3.181... tins [M1]

You cannot buy a fraction of a tin, so must buy 4 whole tins!

Step 5: Calculate total cost of 4 tins at £5.41 each

Total Cost = 4 × £5.41 = £21.64 [M1]

Step 6: Compare with Jessie's budget of £25

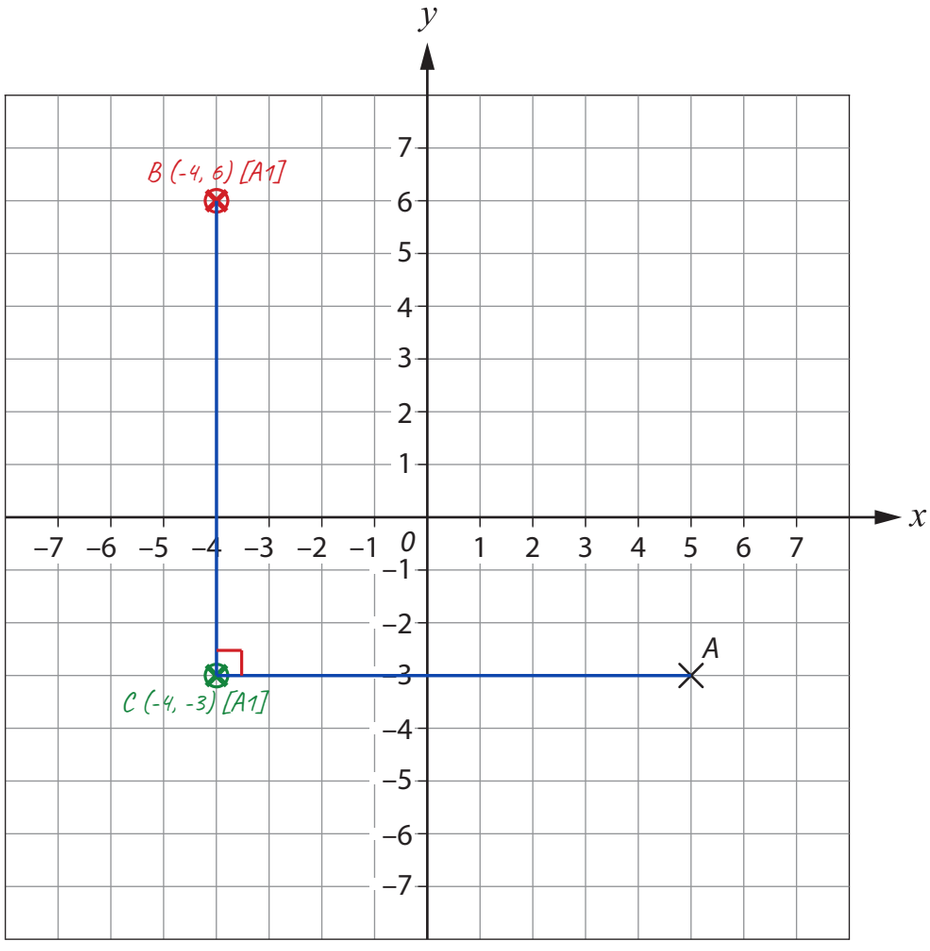

£21.64 < £25.00 (change = £3.36)

Yes, £25 is enough for 4 tins.

Yes, £25 is enough (total £21.64) [A1]

(Total for Question 8 is 6 marks)

9 Here is a coordinate grid.

(a) Write down the coordinates of point *A*.

(1)

(5 , [A1] 3)

(b) Plot point *B* with coordinates (– 4, 6) on the grid.
Remember to label your point.

(1)

(c) Plot a point *C* on the grid so that angle *ACB* is a right angle.
Remember to label your point.

10 Kevin buys a second-hand car for £7346
He knows that the car is worth 27% less than when it was brand new.

Kevin thinks that the car cost more than £9000 when brand new.

Is Kevin correct?
Show why you think this.

(3)

Step 1: Understand reverse percentage relationship

The car has lost 27% of its original brand-new value:

Sale Price = 100% − 27% = 73% of original price [M1 for 73%]

Step 2: Calculate original brand-new price (£7,346 ÷ 0.73)

Original Price = £7,346 ÷ 0.73 [M1]

Original Price = £10,063.0136... ≈ £10,063.01

Alternative comparison method check:

- **If original were £9,000: 73% of £9,000 = £6,570**
- **£7,346 > £6,570, so original > £9,000** □

Step 3: Compare with Kevin's prediction (£9,000)

£10,063.01 > £9,000 (higher by £1,063.01)

Therefore, Kevin is CORRECT.

Yes, Kevin is correct (original £10,063.01 > £9,000) [A1]

(Total for Question 10 is 3 marks)

11 Emma is the recruitment manager in a large company.

She has this information about the number of workers in each of the 20 offices of the company.

number of workers	number of offices
1 to 20	9
21 to 40	8
41 to 60	2
61 to 80	1

Emma estimates the mean number of workers in an office as 30

(a) Is Emma correct?
Show why you think this.

(3)

Step 1: Find midpoints (x) and fx products for each class interval

- 1 to 20: midpoint 10.5 × 9 = 94.5 *[M1 midpoints & fx]*
- 21 to 40: midpoint 30.5 × 8 = 244.0
- 41 to 60: midpoint 50.5 × 2 = 101.0
- 61 to 80: midpoint 70.5 × 1 = 70.5

Step 2: Calculate total estimated workers

Total Workers = 94.5 + 244 + 101 + 70.5 = 510 **[M1]**

Step 3: Calculate estimated mean number of workers per office

Total offices = 9 + 8 + 2 + 1 = 20 offices

Estimated Mean = 510 ÷ 20 = 25.5 workers

Step 4: Compare with Emma's estimate of 30 workers

25.5 < 30 (Or: 20 × 30 = 600 > 510)

Therefore, Emma is NOT correct.

No, estimated mean is 25.5 (not 30) **[A1]**

12 Claire is a designer.
She needs to put some lights around a circular bandstand in a park.

Claire has this scale diagram of the plan view of the bandstand.

scale 1 : 200

Claire knows that

- a set of lights is 4.75 m in length
- each set of lights costs £27.99

(a) Work out the total cost for the sets of lights Claire needs.

(5)

Step 1: Calculate actual diameter of bandstand using scale 1 : 200

Diameter = 4.5 cm × 200 = 900 cm = 9 m *[M1 scale]*

Step 2: Calculate circumference of the circular bandstand

Circumference = π × d = π × 9 = 28.274... m *[M1 circumference]*

Step 3: Calculate number of sets of lights needed (each set = 4.75 m)

Sets = 28.274... ÷ 4.75 = 5.952... sets **[M1]**

You must round up to whole sets: 6 sets of lights required!

Step 4: Calculate total cost of 6 sets at £27.99 each

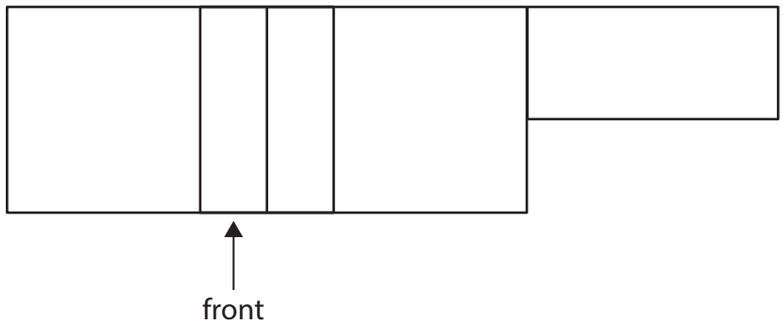

Total Cost = 6 × £27.99 **[M1]**

Total Cost = £167.94

£ **167.94** *[A1]*
